

# Navicat Version 15

**User Guide** 

## Table of Contents

| Chapter 1 - Introduction   | 9  |
|----------------------------|----|
| About Navicat              | 9  |
| Installation               | 11 |
| Registration               | 12 |
| Migration / Upgrade        | 13 |
| End-User License Agreement | 13 |
| Chapter 2 - User Interface | 20 |
| Main Window                | 20 |
| Navigation Pane            | 21 |
| Object Pane                | 22 |
| Information Pane           | 24 |
| Chapter 3 - Navicat Cloud  | 25 |
| About Navicat Cloud        | 25 |
| Manage Navicat Cloud       | 26 |
| Chapter 4 - Connection     | 29 |
| About Connection           | 29 |
| General Settings           | 30 |
| RDBMS                      | 30 |
| MongoDB                    | 32 |
| SSL Settings               | 33 |
| SSH Settings               | 35 |
| HTTP Settings              | 36 |
| Advanced Settings          | 37 |
| Databases Settings         | 39 |
| Chapter 5 - Server Objects | 41 |
| About Server Objects       | 41 |
| MySQL / MariaDB            | 41 |
| Databases                  | 41 |
| Tables                     | 41 |
| Views                      | 42 |
| Procedures / Functions     | 43 |
| Tablespaces                | 44 |
| Events                     | 44 |
| Maintain Objects           | 44 |

| JSON View  | 88  |
| Sort / Find / Replace Documents  | 88  |
| Assistant Editors  | 90  |
| Filter Wizard  | 91  |
| Chapter 7 - Query  | 94  |
| About Query  | 94  |
| RDBMS  | 95  |
| SQL Editor   | 95  |
| SQL Builder (Available only in Non-Essentials Edition)                       | 99  |
| Query Parameters   | 104 |
| Debug Oracle Query (Available only in Non-Essentials Edition)                | 104 |
| Query Results  | 104 |
| MongoDB  | 105 |
| Script Editor  | 105 |
| Find Builder (Available only in Non-Essentials Edition)                      | 109 |
| Aggregate Builder (Available only in Non-Essentials Edition)                 | 110 |
| Query Results  | 111 |
| Code Snippets (Available only in Non-Essentials Edition)                     | 111 |
| Chapter 8 - Model (Available only in Navicat Premium and Enterprise Edition) | 114 |
| About Model  | 114 |
| Model Window   | 115 |
| Physical Models  | 117 |
| Create Physical Models   | 117 |
| Add Databases / Schemas  | 117 |
| Add Tables   | 118 |
| Add Views  | 118 |
| Add Foreign Keys   | 119 |
| Logical Models   | 120 |
| Create Logical Models  | 120 |
| Add Entities   | 120 |
| Add Relations  | 120 |
| Conceptual Models  | 121 |
| Create Conceptual Models   | 121 |
|  |     |

|    | Add Entities   | 121 |
|----|--|-----|
|    | Add Relations  | 122 |
|    | Diagram Layout   | 122 |
|    | Work with Diagram Canvas                                       | 122 |
|    | Add Labels   | 123 |
|    | Add Notes  | 124 |
|    | Add Images   | 124 |
|    | Add Shapes   | 125 |
|    | Add Layers   | 125 |
|    | Reverse Engineering  | 126 |
|    | Forward Engineering  | 126 |
|    | Synchronize to Database  | 126 |
|    | Export SQL   | 131 |
|    | Model Conversion   | 133 |
|    | Print & Export Model   | 133 |
|    | Model Hints and Tips   | 133 |
| Ch | hapter 9 - Debugger (Available only in Non-Essentials Edition) | 136 |
|    | About Debugger   | 136 |
|    | Oracle PL/SQL Debugger   | 136 |
|    | PostgreSQL PL/pgSQL Debugger                                   | 137 |
| Ch | hapter 10 - Data Migration Tools                               | 140 |
|    | About Data Migration Tools                                     | 140 |
|    | Import Wizard  | 140 |
|    | About Import Wizard  | 140 |
|    | Choose File Format   | 140 |
|    | Choose Files   | 140 |
|    | Choose Record Format / File Options                            | 141 |
|    | Choose Format Options  | 142 |

## **Chapter 1 - Introduction**

## About Navicat

**Navicat** is a multi-connections Database Administration tool allowing you to connect to MySQL, Oracle, PostgreSQL, SQLite, SQL Server, MariaDB and/or MongoDB databases, making database administration to multiple kinds of database so easy. It can also manage cloud databases such as Amazon Redshift, Amazon RDS, Alibaba Cloud. Features in Navicat are sophisticated enough to provide professional developers for all their specific needs, yet easy to learn for users who are new to database server. With its well-designed Graphical User Interface(GUI), Navicat lets you quickly and easily create, organize, access and share information in a secure and easy way.

Navicat is available on three platforms - Microsoft Windows, macOS and Linux. It can connect to local/remote servers, providing several utility tools such as Navicat Cloud Collaboration, Data Modeling, Data Transfer, Data/Structure Synchronization, Import/Export, Backup/Restore, Charts and Automation.

For details, visit our website: https://www.navicat.com

#### **System Requirements**

#### Windows

 Microsoft Windows Vista, Windows 7, Windows 8, Windows 8.1, Windows 10, Server 2008, Server 2012, Server 2016, Server 2019

#### macOS

 macOS 10.12 Sierra, macOS 10.13 High Sierra, macOS 10.14 Mojave, macOS 10.15 Catalina, macOS 11 Big Sur

#### Linux

• Debian 9 or later, Ubuntu 16.04 or later, CentOS 7 or later, Fedora 26 or later, Linux Mint 18 or later

#### **Supported On-Premises Databases**

- MySQL 3.23 or later, Drizzle, OurDelta, Percona Server
- PostgreSQL 7.3 or later
- Oracle 9i or later
- SQLite 2 and 3
- SQL Server 2000 or later
- MariaDB 5.1 or later
- MongoDB 3.0 to 4.4

#### **Supported Cloud Databases**

#### Amazon AWS

- Amazon Redshift
- Amazon Aurora for MySQL
- Amazon Aurora for PostgreSQL
- Amazon RDS for MySQL
- Amazon RDS for PostgreSQL
- Amazon RDS for Oracle
- Amazon RDS for SQL Server
- Amazon RDS for MariaDB
- Amazon DocumentDB

#### **Google Cloud**

- Google Cloud SQL for MySQL
- Google Cloud SQL for PostgreSQL

#### **Oracle Cloud**

- Oracle Database Cloud Service
- Oracle MySQL Cloud Service

#### **Microsoft Azure**

- Microsoft Azure SQL Database
- Microsoft Azure Database for MySQL
- Microsoft Azure Database for PostgreSQL
- Microsoft Azure Database for MariaDB

#### MongoDB Cloud Services

MongoDB Atlas

#### Alibaba Cloud

• Alibaba Cloud ApsaraDB for RDS (MySQL)

- Alibaba Cloud ApsaraDB for RDS (PostgreSQL)
- Alibaba Cloud ApsaraDB for RDS (SQL Server)
- Alibaba Cloud ApsaraDB for MongoDB

#### **Tencent Cloud**

- Tencent Cloud TencentDB for MySQL
- Tencent Cloud TencentDB for SQL Server
- Tencent Cloud TencentDB for PostgreSQL
- Tencent Cloud TencentDB for MariaDB
- Tencent Cloud TencentDB for MongoDB

#### Huawei Cloud

- Huawei Cloud RDS for MySQL
- Huawei Cloud RDS for PostgreSQL
- Huawei Cloud RDS for SQL Server
- Huawei Cloud Document Database Service

## Installation

We strongly suggest that you shut down any opened applications. This will help ensure a smooth installation.

#### Installation for Download Version

- 1. Download Navicat macOS version.
- 2. Open the .dmg file.
- 3. Drag Navicat to your Applications folder to install.

#### Installation for CD Version

- 1. Load the Navicat CD Installation disk into the CD-ROM drive.
- 2. Open the **.dmg** file.
- 3. Drag Navicat to your Applications folder to install.

## Registration

When the trial period is finished, Navicat requires a license key or a subscription plan to continue using the features.

**Note:** Perpetual License and Subscription Plan cannot be used at the same Navicat. Before changing the registration method, you need to deactivate the license key or sign out your Navicat ID.

#### **Perpetual License**

If you have purchased a perpetual license, you will receive a license key for activating Navicat.

In the **Perpetual License** section, paste your license key (16 digits) and click the **Activate** button. Navicat contacts our licensing server to activate the license key. If the activation process is successful, the license key details are displayed.

#### **Manual Activation**

Manual activation is available when your computer does not have an internet connection. You will need another computer with an internet connection to complete this activation process.

- 1. If the online activation is failed, click Manual Activation.
- 2. Copy the Request Code in the Copy the Request Code Here: box.
- Open web browser on a computer with an internet connection and then go to https://customer.navicat.com/manual\_activate.php.
- 4. Paste/Enter the Request Code into the left box.
- 5. Click Get Activation Code.
- 6. Copy the generated Activation Code in the right box.
- 7. Go back to the computer where you are activating Navicat.
- 8. Paste the Activation Code into the Paste the Activation Code Here: box.
- 9. Click Activate.

#### **Subscription Plan**

If you have subscribed a plan, you can sign in your Navicat ID to use Navicat during the subscription term.

Note: Navicat ID is the Email address that you used to subscribe the plan.

In the **Subscription** section, provide your **Navicat ID** and **Password**. After signed in, the subscription plan details are displayed.

Navicat contacts our licensing server once per hour to auto reload the plan by default. If you have updated your plan in the portal site, you can use the **Reload Plan** button to force reloading the new plan.

**Note:** Each Navicat ID can connect to only one Navicat. If you sign in your Navicat ID in another Navicat, you will be signed out from the current Navicat.

## Migration / Upgrade

#### Migrate Navicat to a new computer

- 1. In Navicat, choose File -> Export Connections. The exported file (.ncx) contains all your connection settings.
- 2. Backup the exported file (.ncx).
- 3. In Navicat, choose Navicat XXX -> Registration.
- 4. [Perpetual License] Click **Deactivate** to online deactivate the license key.
- 5. [Subscription Plan] Click Sign Out to sign out your Navicat ID.
- 6. Uninstall Navicat from the existing computer.
- 7. Re-install Navicat in the new computer.
- Open Navicat and choose File -> Import Connections in the new computer to import the connection settings (.ncx).

When a new connection is being established, Navicat will create a subfolder under Settings Location. Most files are stored within this subfolder. To look for the path, control-click the connection and select Edit Connection -> Advanced -> Settings Location.

Moreover, all your saved profiles are saved under the default path, e.g. ~/Library/Application Support/PremiumSoft CyberTech/Navicat CC/Navicat Premium/Profiles.

#### **Upgrade Navicat**

If you want to upgrade an installed copy of Navicat to the latest release, please choose **Navicat XXX** -> **Check for Updates** to start the Updater. It will automatically check your installed version. If there is a new version, simply follow the steps in the Updater to upgrade your Navicat. It will replace your previous Navicat and your current settings will remain unchanged.

Or, you can submit your registered email address on the Customer Center to download the latest version installer.

## **End-User License Agreement**

Note: For the License Agreement of Navicat Cloud service, please click here.

IMPORTANT: THIS SOFTWARE END USER LICENSE AGREEMENT ("EULA") IS A LEGAL AGREEMENT BETWEEN YOU (EITHER AN INDIVIDUAL OR, IF PURCHASED OR OTHERWISE ACQUIRED BY OR FOR AN ENTITY, AN ENTITY) AND PREMIUMSOFT CYBERTECH LTD..READ IT CAREFULLY BEFORE COMPLETING THE INSTALLATION PROCESS AND USING THE SOFTWARE. IT PROVIDES A LICENSE TO USE THE SOFTWARE AND CONTAINS WARRANTY INFORMATION AND LIABILITY DISCLAIMERS. BY INSTALLING AND USING THE SOFTWARE, YOU ARE CONFIRMING YOUR ACCEPTANCE OF THE SOFTWARE AND AGREEING TO BECOME BOUND BY THE TERMS OF THIS AGREEMENT. IF YOU DO NOT AGREE TO BE BOUND BY THESE TERMS, THEN DO NOT INSTALL THE SOFTWARE AND RETURN THE SOFTWARE TO YOUR PLACE OF PURCHASE. THIS EULA SHALL APPLY ONLY TO THE SOFTWARE SUPPLIED BY PREMIUMSOFT CYBERTECH LTD. HEREWITH REGARDLESS OF WHETHER OTHER SOFTWARE IS REFERRED TO OR DESCRIBED HEREIN.

#### 1. Definitions

- a. "Non-commercial Version" means a version of the Software, so identified, for use by i) the individual who is a natural person and not a corporation, company, partnership or association or other entity or organization (ii) the individual who is a student, faculty or staff member at an educational institution, and (iii) staff of a non-profit organization or charity organization only. For purposes of this definition, "educational institution" means a public or private school, college, university and other post secondary educational establishment. A non-profit organization is an organization whose primary objective is to support an issue or matter of private interest or public concern for non-commercial purposes.
- b. "Not For Resale (NFR) Version" means a version, so identified, of the Software to be used to review and evaluate the Software, only.
- c. "PremiumSoft" means PREMIUMSOFT CYBERTECH LTD. and its licensors, if any.
- d. "Software" means only the PremiumSoft software program(s) and third party software programs, in each case, supplied by PremiumSoft herewith, and corresponding documentation, associated media, printed materials, and online or electronic documentation.
- e. "Unregistered version", "Trial version" or "Demo version" means an unregistered copy of the SOFTWARE ("UNREGISTERED SOFTWARE") which may be used by the USER for evaluation purposes for a period of fourteen (14) days following the initial installation of the UNREGISTERED SOFTWARE. At the end of the trial period ("TRIAL PERIOD"), the USER must either register the SOFTWARE or remove it from his system. The UNREGISTERED SOFTWARE may be freely copied and distributed to other users for their evaluation.
- f. "Navicat Essentials" means a version of the Software, so identified, to be used for commercial purpose.

#### 2. License Grants

The licenses granted in this Section 2 are subject to the terms and conditions set forth in this EULA:

- a. Subject to Section 2(b), you may install and use the Software on a single computer; OR install and store the Software on a storage device, such as a network server, used only to install the Software on your other computers over an internal network, provided you have a license for each separate computer on which the Software is installed and run. Except as otherwise provided in Section 2(b), a license for the Software may not be shared, installed or used concurrently on different computers.
- b. In addition to the single copy of the Software permitted in Section 2(a), the primary user of the computer on which the Software is installed may make a second copy of the Software and install it on either a portable computer or a computer located at his or her home for his or her exclusive use, provided that:

- A. the second copy of the Software on the portable or home computer (i) is not used at the same time as the copy of the Software on the primary computer and (ii) is used by the primary user solely as allowed for such version or edition (such as for educational use only),
- B. the second copy of the Software is not installed or used after the time such user is no longer the primary user of the primary computer on which the Software is installed.
- c. In the event the Software is distributed along with other PremiumSoft software products as part of a suite of products (collectively, the "Studio"), the license of the Studio is licensed as a single product and none of the products in the Studio, including the Software, may be separated for installation or use on more than one computer.
- d. You may make one copy of the Software in machine-readable form solely for backup purposes. You must reproduce on any such copy all copyright notices and any other proprietary legends on the original copy of the Software. You may not sell or transfer any copy of the Software made for backup purposes.
- e. You agree that PremiumSoft may audit your use of the Software for compliance with these terms at any time, upon reasonable notice. In the event that such audit reveals any use of the Software by you other than in full compliance with the terms of this Agreement, you shall reimburse PremiumSoft for all reasonable expenses related to such audit in addition to any other liabilities you may incur as a result of such non-compliance.
- f. Your license rights under this EULA are non-exclusive.

#### 3. License Restrictions

- a. Other than as set forth in Section 2, you may not make or distribute copies of the Software, or electronically transfer the Software from one computer to another or over a network.
- b. You may not alter, merge, modify, adapt or translate the Software, or decompile, reverse engineer, disassemble, or otherwise reduce the Software to a human-perceivable form.
- c. Unless otherwise provided herein, you may not rent, lease, or sublicense the Software.
- d. Other than with respect to a Trial / Demo Version, Non-commercial Lite Version or a Not For Resale Version of the Software, you may permanently transfer all of your rights under this EULA only as part of a sale or transfer, provided you retain no copies, you transfer all of the Software (including all component parts, the media and printed materials, any upgrades, this EULA, the serial numbers, and, if applicable, all other software products provided together with the Software), and the recipient agrees to the terms of this EULA. If the Software is an upgrade, any transfer must include all prior versions of the Software from which you are upgrading. If the copy of the Software is licensed as part of the whole Studio (as defined above), the Software shall be transferred only with and as part of the sale or transfer any Trial / Demo Version, Non-commercial Lite Version or Not For Resale Version of the Software.
- e. Unless otherwise provided herein, you may not modify the Software or create derivative works based upon the Software.
- f. Non-commercial Versions of the Software may not be used for, or distributed to any party for, any commercial purpose.
- g. Unless otherwise provided herein, you shall not
  - A. in the aggregate, install or use more than one copy of the Trial / Demo Version and Non-commercial Lite Version of the Software,

- B. download the Trial / Demo Version and Non-commercial Lite Version of the Software under more than one username,
- C. alter the contents of a hard drive or computer system to enable the use of the Trial / Demo Version of the Software for an aggregate period in excess of the trial period for one license to such Trial / Demo Version,
- D. disclose the results of software performance benchmarks obtained using the Trial / Demo Version or Non-commercial Lite Version to any third party without PremiumSoft prior written consent, or
- E. use the Trial / Demo Version of the Software for a purpose other than the sole purpose of determining whether to purchase a license to a commercial or education version of the software; provided, however, notwithstanding the foregoing, you are strictly prohibited from installing or using the Trial / Demo Version or Non-commercial Lite Version of the Software for any commercial training purpose.
- h. You may only use the Not for Resale Version of the Software to review and evaluate the Software.
- You may receive the Software in more than one medium but you shall only install or use one medium. Regardless of the number of media you receive, you may use only the medium that is appropriate for the server or computer on which the Software is to be installed.
- j. You may receive the Software in more than one platform but you shall only install or use one platform.
- k. You shall not use the Software to develop any application having the same primary function as the Software.
- I. In the event that you fail to comply with this EULA, PremiumSoft may terminate the license and you must destroy all copies of the Software (with all other rights of both parties and all other provisions of this EULA surviving any such termination).
- m. This program may include Oracle Instant Client (OCI). You agree that you shall
  - 1. not use of the Oracle Instant Client to the business operations;
  - 2. not assign, give, or transfer the Oracle Instant Client or an interest in them to another individual or entity;
    - a. make the Programs available in any manner to any third party for use in the third party's business operations; and
    - b. title to the Programs from passing to the end user or any other party;
  - not reverse engineer, disassemble or decompilation the Oracle Instant Client and duplicate the Programs except for a sufficient number of copies of each Program for your licensed use and one copy of each Program media;
  - 4. discontinue use and destroy or return to all copies of the Oracle Instant Client and documentation after termination of the Agreement;
  - 5. not pubish any results of benchmark tests run on the Programs;
  - comply fully with all relevant export laws and regulations of the United States and other applicable export and import laws to assure that neither the Oracle Instant Client, nor any direct product thereof, are exported, directly or indirectly, in violation of applicable laws;
  - 7. allow PremiumSoft to audit your use of the Oracle Instant Client;

#### 4. Upgrades

If this copy of the Software is an upgrade from an earlier version of the Software, it is provided to you on a license exchange basis. You agree by your installation and use of such copy of the Software to voluntarily terminate your

earlier EULA and that you will not continue to use the earlier version of the Software or transfer it to another person or entity unless such transfer is pursuant to Section 3.

#### 5. Ownership

The foregoing license gives you limited license to use the Software. PremiumSoft and its suppliers retain all rights, title and interest, including all copyright and intellectual property rights, in and to, the Software (as an independent work and as an underlying work serving as a basis for any application you may develop), and all copies thereof. All rights not specifically granted in this EULA, including Federal and International Copyrights, are reserved by PremiumSoft and its suppliers.

#### 6. LIMITED WARRANTY AND DISCLAIMER

- a. Except with respect to Trial / Demo Version, Non-commercial Lite Version and Not For Resale Version of the Software, PremiumSoft warrants that, for a period of thirty (30) days from the date of delivery (as evidenced by a copy of your receipt): the physical media on which the Software is furnished will be free from defects in materials and workmanship under normal use. The Software is provided "as is". PremiumSoft makes no warranties, express or implied, arising from course of dealing or usage of trade, or statutory, as to any matter whatsoever.
- b. PremiumSoft provides no remedies or warranties, whether express or implied, for Trial / Demo version, Non-commercial Lite version and the Not for Resale version of the Software. Trial / Demo version, Non-commercial Lite version and the Not for Resale version of the Software are provided "as is".
- c. Except as set Forth in the foregoing limited warranty with respect to software other than Trial/ Demo version, Non-commercial Lite version and Not for Resale version, PremiumSoft and its suppliers disclaim all other warranties and representations, whether express, implied, or otherwise, including the warranties of merchantability or fitness for a particular purpose. Also, there is no warranty of non-infringement and title or quiet enjoyment. PremiumSoft does not warrant that the Software is error-free or will operate without interruption. The Software is not designed, intended or licensed for use in hazardous environments requiring fail-safe controls, including without limitation, the design, construction, maintenance or operation of nuclear facilities, aircraft navigation or communication systems, air traffic control, and life support or weapons systems. PremiumSoft specifically disclaims any express or implied warranty of fitness for such purposes.
- d. If applicable law requires any warranties with respect to the Software, all such warranties are limited in duration to thirty (30) days from the date of delivery.
- e. No oral or written information or advice given by PremiumSoft, its dealers, distributors, agents or employees shall create a warranty or in any way increase the scope of ANY warranty PROVIDED HEREIN.

#### 7. LIMITATION OF LIABILITY

(a) Neither PremiumSoft nor its suppliers shall be liable to you or any third party for any indirect, special, incidental, punitive or consequential damages (including, but not limited to, damages for the inability to use equipment or access data, loss of business, loss of profits, business interruption or the like), arising out of the use of, or inability to use, the Software and based on any theory of liability including breach of contract, breach of warranty,

tort (including negligence), product liability or otherwise, even if PremiumSoft or its representatives have been advised of the possibility of such damages.

#### 8. Third Party Software

The Software may contain third party software which requires notices and/or additional terms and conditions. By accepting this EULA, you are also accepting the additional terms and conditions of the third party software.

#### 9. General

No PremiumSoft dealer, agent or employee is authorized to make any amendment to this EULA.

This EULA contains the complete agreement between the parties with respect to the subject matter hereof, and supersedes all prior or contemporaneous agreements or understandings, whether oral or written. You agree that any varying or additional terms contained in any purchase order or other written notification or document issued by you in relation to the Software licensed hereunder shall be of no effect. The failure or delay of PremiumSoft to exercise any of its rights under this EULA or upon any breach of this EULA shall not be deemed a waiver of those rights or of the breach.

If any provision of this EULA shall be held by a court of competent jurisdiction to be contrary to law, that provision will be enforced to the maximum extent permissible, and the remaining provisions of this EULA will remain in full force and effect.

#### 10. Basis of Bargain

The Limited Warranty and Disclaimer and Limited Liability set forth above are fundamental elements of the basis of the agreement between PremiumSoft and you. PremiumSoft would not be able to provide the Software on an economic basis without such limitations. Such Limited Warranty and Disclaimer and Limited Liability inure to the benefit of PremiumSoft's licensors.

#### 11. Term

By downloading and/or installing this SOFTWARE, the Licensor agrees to the terms of this EULA.

This license is effective until terminated. Licensor has the right to terminate your License immediately if you fail to comply with any term of this License.

"as is". Licensor makes no warranties, express or implied, arising from course of dealing or usage of trade, or statutory, as to any matter whatsoever. In particular, any and all warranties or merchantability, fitness for a particular purpose or non-infringement of third party rights are expressly excluded.

#### 12. Governing Law

This License will be governed by the laws in force in Hong Kong. You hereby consent to the non-exclusive jurisdiction and venue sitting in Hong Kong to resolve any disputes arising under this EULA.

Should you have any questions concerning the validity of this License, please contact: licensing@navicat.com. If you desire to contact the Licensor for any other reason, please contact support@navicat.com.

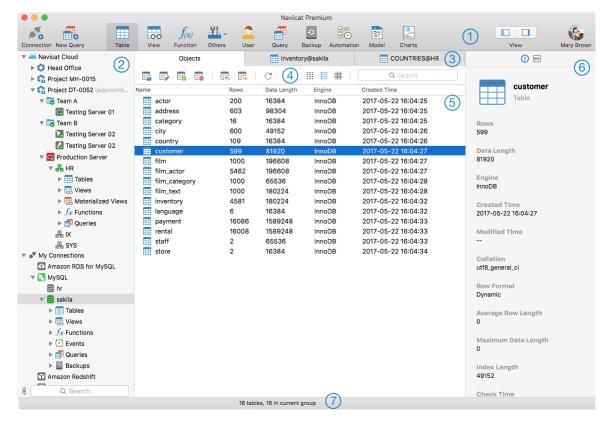

PremiumSoft and other trademarks contained in the Software are trademarks or registered trademarks of PremiumSoft CyberTech Ltd. in the United States and/or other countries. Third party trademarks, trade names, product names and logos may be the trademarks or registered trademarks of their respective owners. You may not remove or alter any trademark, trade names, product names, logo, copyright or other proprietary notices, legends, symbols or labels in the Software. This EULA does not authorize you to use PremiumSoft or its licensors names or any of their respective trademarks.

## Chapter 2 - User Interface

## Main Window

The Main Window consists of several toolbars and panes for you to work on connections, database objects and advanced tools.

Hint: Navicat has added support for the system-wide dark mode.

#### 1 Main Toolbar

The Main Toolbar allows you to access basic objects and features, such as connections, users, tables, collections, backup, automation and more. If the Main Toolbar is hidden, choose **View** -> **Show Toolbar** from the menu bar.

#### 2 Navigation Pane

The Navigation Pane is the basic way to navigate with connections, databases and database objects. If the Navigation Pane is hidden, choose **View** -> **Navigation Pane** -> **Show Navigation Pane** from the menu bar.

#### 3 Tab Bar

The Tab Bar allows you to switch among the tabbed windows on the Object Pane. You can choose to always display pop-ups on a new tab, or to always display them in a new window. If you have multiple tabs open, you can use COMMAND-{ or COMMAND-} to easily switch to other tabs. Control-click a tab to add it to favorite list or startup list. See also Preferences.

#### Object Toolbar

The Object Toolbar provides other controls that you can use to manipulate the objects.

#### 5 Object Pane

The Object Pane displays a list of objects (such as tables, collections, views, queries) and the tabbed window forms. Use the **Ⅲ** List, **Ⅲ** Detail and **Ⅲ** ER Diagram buttons to change the view of the Objects tab.

#### 6 Information Pane

The Information Pane shows the detailed object information, project activities, the DDL of database objects, object dependencies, membership of users/roles and preview. If the Information Pane is hidden, choose **View** -> **Information Pane** -> **Show Information Pane** from the menu bar.

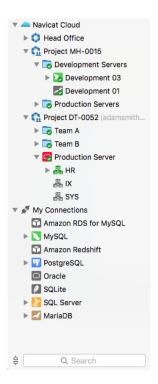

#### O Status Bar

The Status Bar displays the current window's status information. To view or hide the Status Bar, choose View -> Show Status Bar from the menu bar.

### **Navigation Pane**

The Navigation pane employs tree structure which allows you to take action upon the database and their objects through their pop-up menus quickly and easily. If the **Show objects under schema in navigation pane** option is checked at the **Preferences** window, all database objects are also displayed in the pane. To connect to a database or schema, simply double-click it in the pane.

After logged in the Navicat Cloud feature, the Navigation pane will be divided into Navicat Cloud and My Connections sections.

You can filter the tree by typing a search string in the **Search** text box. To show the opened objects only, click the  $\forall$  button or choose **View** -> **Navigation Pane** -> **Show Only Active Objects** from the menu bar.

If you want to hide the group structure in the Navigation pane, choose View -> Navigation Pane -> Flatten Connection.

If the Navigation pane is hidden, choose View -> Navigation Pane -> Show Navigation Pane.

## **Object Pane**

In the Objects tab, you can use the 🗰 List, 🗎 Detail and 🗰 ER Diagram buttons to change the object view.

If you want to hide the group structure in List view or Details view, choose View -> Flatten Object List from the menu bar.

#### **List View**

By default, Navicat uses the List view. It only shows the names of objects.

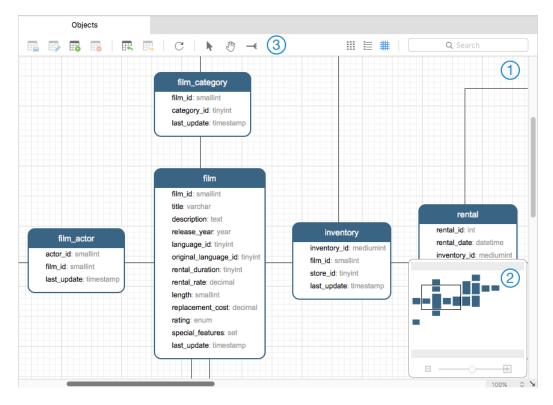

#### **Detail View**

**Detail** view shows the name and several properties of objects in columns. To change the display columns of properties, choose **View** -> **Choose Columns** from the menu bar and choose display columns for different objects from the pop-up window.

#### ER Diagram View (Available only in Non-Essentials Edition)

**Note:** Available only for MySQL, Oracle, PostgreSQL, SQLite, SQL Server and MariaDB. Only tables provide ER Diagram view.

An ER diagram will be generated automatically if the selected database/schema contains tables. ER diagram files are stored under Settings Location.

#### 1 Diagram Canvas

Display table fields and relationships between tables in a database/schema graphically. You can add, edit or delete relations between tables, add or delete vertices on a relation line, and also change the color of a table.

#### Add a Foreign Key

Click from the object toolbar. Drag and drop a field from the child table to the parent table.

#### Edit or Delete a Foreign Key

Control-click a relation line and select **Design Relation** or **Delete Relation** from the pop-up menu.

#### Add or Delete a Vertex

Select a relation line or a vertex. Press and hold the SHIFT key and click on the relation line or the vertex.

#### **Change Table Color**

Control-click a table and pick a **Color** from the pop-up menu.

#### Apply Auto Layout

Control-click on the canvas and select Auto Layout from the pop-up menu.

#### **Change Page Dimension**

Control-click on the canvas and select **Page Dimension** from the pop-up menu. The corresponding paper dimension will reflect in the Overview pane.

**Note:** Double-click a table in the ER Diagram view will open the Table Designer, while double-click a table in the List or Detail view will open the Table Viewer.

#### Overview

To zoom in or zoom out the selected area of the diagram, adjust the slider of the Overview. Same effect can be achieved with keyboard shortcuts:

Zoom In: [COMMAND-Mousewheel up]

Zoom Out: [COMMAND-Mousewheel down]

Zoom Reset: [COMMAND-0]

#### Object Toolbar

#### Ð

Switch to hand mode for moving the diagram. Or, you can press and hold the SPACE key, then move the diagram.

Add a relation between two table fields. Click this button, and then drag and drop a field from the child table to the parent table.

## **Information Pane**

The Information Pane shows the detailed object information, project activities, the DDL of database objects, object dependencies, membership of users/roles and preview. If the Information Pane is hidden, choose **View** -> **Information Pane** -> **Show Information Pane** from the menu bar.

You can select any connections, objects or projects, and then select the corresponding buttons on the Information Pane.

| Button     | Description   |
|------------|---|
| (i)        | General - Show the general information of the object/project.                         |
| 0          | Preview - Show the SQL statements in the query.                                       |
| DDL        | DDL - Show the DDL statements of the object.  |
|            | Using - Show the objects that the selected object depends on.                         |
|            | <b>Objects</b> - Show the objects in the tablespace.                                  |
|            | Member Of - Show the roles that the user or the role assigned to.                     |
| ∎÷□        | Used By - Show the objects that depend on the selected object.                        |
|            | Members - Show the members of the role.   |
| ()         | Code Snippet - Show all built-in and custom code snippets.                            |
|            | (Available only in Non-Essentials Edition)  |
| <b>BE</b>  | Identifiers - Show all available tables, collections, views or fields in the selected |
|            | database or schema.   |
| Ô          | Privileges - Show the privileges granted to the user.                                 |
| $\bigcirc$ | Project - Show the project members and the project activities done by the             |
|            | members. Click + to add members to the project.                                       |
| ଚ୍ଚ        | Type Color - Set the color of particular types for highlighting cells in Grid View.   |
|            | (Available only for MongoDB)  |

## **Chapter 3 - Navicat Cloud**

### About Navicat Cloud

**Navicat Cloud** provides a cloud service for synchronizing connections, queries, model files and virtual group information from Navicat, other Navicat family members, different machines and different platforms. All the Navicat Cloud objects are located under different projects. You can share the project to other Navicat Cloud accounts for collaboration.

Navicat Cloud could not connect and access your databases. By which it means, it could only store your connection settings, queries, model files, and virtual group; your database passwords and data (e.g. tables, views, etc) will not be stored to Navicat Cloud.

**Note:** PremiumSoft will keep all synchronized files strictly confidential, and all employees are prohibited from viewing/accessing content of files you may store in your Navicat Cloud account.

#### Create a new account

- 1. In the main window, click Sign In and click Create Navicat ID.
- 2. Enter the required information and click the **Sign Up** button. A verification email will send to your email address.
- 3. Click the link in the email to verify the new account.

Hint: You can sign in with the same Navicat ID you use for the Navicat Customer Center.

#### Sign in Navicat Cloud

- 1. In the main window, click Sign In and enter your Navicat ID and Password.
- 2. Click the **Sign In** button.
- 3. If you enabled two-step verification in Navicat Cloud Portal site, a code will be sent to your phone via your mobile app. Enter the received code to sign in.

#### Sign out Navicat Cloud

- In the main window, control-click Navicat Cloud and select Close All Connections to close all connections under Navicat Cloud.
- 2. Click your avatar on the toolbar.
- 3. Click your email in the Navicat Cloud window and select Sign Out.

## Manage Navicat Cloud

#### View the cloud usage

- 1. In the main window, click your avatar on the toolbar.
- 2. Your cloud usage and current plan will be shown in the Navicat Cloud window.

**Note:** A connection, a query, a model or a virtual group counts for one unit.

#### Change your avatar

- 1. In the main window, click your avatar on the toolbar.
- 2. Click the avatar in the Navicat Cloud window.
- 3. Choose an image file.

#### Manage your Navicat Cloud account

- 1. In the main window, click your avatar on the toolbar.
- 2. Click your email in the Navicat Cloud window and select Manage Account.
- 3. A browser will open with Navicat Cloud Portal site.

#### Upgrade the Navicat Cloud plan

- 1. In the main window, click your avatar on the toolbar.
- 2. Click **Upgrade** in the Navicat Cloud window.
- 3. A browser will open with Navicat Cloud Portal site.

#### Create a project

- 1. Select **Navicat Cloud** in the Navigation pane.
- 2. Control-click it and select New Project.

#### Add members to a project

- 1. Select a project in the Navigation pane.
- 2. Control-click it and select Collaborate with.
- 3. Click Add Members.
- 4. Enter the members' Navicat ID.

5. Select the member role.

#### 6. Click Add.

| Member Roles | Privileges   |
|--------------|--|
| Owner        | Read Objects, Write Objects, Manage Members and Delete Project |
| Admin        | Read Objects, Write Objects and Manage Members                 |
| Member       | Read Objects and Write Objects                                 |
| Guest        | Read Objects   |

Note: Each time can add up to 10 members. Use comma or enter to separate the members in the edit box.

#### Manage members in a project

- 1. Select a project in the Navigation pane.
- 2. Control-click it and select Collaborate with.
- 3. Click **Apply** after changes.

Note: If you are the Owner or Admin, you can click the x button to remove the member.

#### Rename a project

- 1. Select a project in the Navigation pane.
- 2. Control-click it and select **Rename**.
- 3. Enter the project name.

#### Quit a project

- 1. Select a project in the Navigation pane.
- 2. Control-click it and select **Quit Project**.

#### Delete a project

- 1. Select a project in the Navigation pane.
- 2. Control-click it and select **Delete Project**.

#### Move/copy a connection to a project

- 1. Control-click a connection under My Connections and select Move Connection To or Copy Connection To.
- 2. Select an existing project or create a new project.
- The connection will move or copy to Navicat Cloud. And, all its query files and virtual groups will store in Navicat Cloud.

#### Move/copy a connection to My Connections

- Control-click a connection under Navicat Cloud and select Move Connection To or Copy Connection To -> My Connections.
- 2. The connection will move or copy to My Connections. And, all its query files and virtual groups will store in the local machine.

#### Move/copy a model to Navicat Cloud

- 1. Select a model file under My Connections.
- 2. Drag and drop it to a project in **Navicat Cloud**.

#### Move/copy a model to My Connections

- 1. Select a model file in a project under **Navicat Cloud**.
- 2. Drag and drop it to **My Connections**.

## **Chapter 4 - Connection**

## About Connection

To start working with your server in Navicat, you should first establish a connection or several connections using the Connection window. If you are new to the server or 'Net in general' and are not quite sure how things work, you may want to look at:

- MySQL User Manual
- Oracle Database Documentation
- PostgreSQL User Manual
- SQLite User Manual
- SQL Server MSDN Library
- MariaDB Documentation
- MongoDB Manual

To create a new connection, click *formation* and select your server type. Then, enter the necessary information in the Connection window.

**Note:** Navicat authorizes you to make connection to remote servers running on different platforms (i.e. Windows, macOS, Linux and UNIX), and supports PAM and GSSAPI authentication.

You can edit the connection properties by control-click the connection and select Edit Connection.

#### **Navicat Cloud**

To copy or move a connection between **My Connections** and **Navicat Cloud**, control-click the connection and select **Copy Connection To** or **Move Connection To**.

#### Flush MySQL/MariaDB Connection

To clear or reload various internal caches, flush tables, or acquire locks, control-click your connection in the Navigation pane and select **Flush** and choose the flush option. You must have the **RELOAD** privilege to use this feature.

#### Manage Azure SQL Database Firewall Rules

You cannot connect to Azure SQL Database until you have granted your client IP access. To access Azure SQL Database from your computer, ensure that your firewall allows outgoing TCP communication on TCP port 1433. You must have at least one firewall rule before you can connection to Azure SQL Database.

To manage the Firewall Rule settings, control-click your Azure SQL Database connection in the Navigation pane and select **SQL Azure Firewall Rules**. Add a new rule by providing an IP address range.

#### **Testing Account**

Navicat provides evaluated accounts for testing purpose.

#### MySQL

- Host: server1.navicat.com
- Port: 4406
- User Name: navicat
- Password: testnavicat

#### PostgreSQL

- Host: server1.navicat.com
- Port: 5432
- Initial Database: HR
- User Name: navicat
- Password: testnavicat

## **General Settings**

#### **RDBMS**

To successfully establish a new connection to local/remote server - no matter via SSL, SSH or HTTP, set the database login information in the General tab. If your Internet Service Provider (ISP) does not provide direct access to its server, Secure Tunneling Protocol (SSH) / HTTP is another solution.

Note: The following options depend on the connection server type and sort in ascending order.

#### Add To

After you logged in the Navicat Cloud feature, you can choose to save the connection to My Connections or a project in Navicat Cloud.

#### Authentication

| SQL Server     | Use login records to validate the connection. Users must provide their server login: User |
|----------------|---|
| Authentication | Name and Password.  |
| Windows        | When a user connects through a Windows user account, SQL Server validates the             |
| Authentication | account name and password using the Windows principal token in the operating system.      |

#### **Connection Name**

Enter a friendly name to best describe your connection.

#### **Connection Type**

| Basic | In Basic mode, it connects to Oracle through the Oracle Call Interface (OCI). Enter the |
|-------|---|
|       | Host and Port. Set the Service Name/SID which the user connects when making             |
|       | connection. Select the corresponding radio button.                                      |
| TNS   | In TNS mode, it connects to Oracle server using an alias entry from a tnsnames.ora file |
|       | through the Oracle Call Interface (OCI). User needs to provide the Net Service Name.    |

OCI is an application programming interface that allows an application developer to use a third-generation language's native procedure or function calls to access the Oracle database server and control all phases of SQL statement execution. OCI is a library of standard database access and retrieval functions in the form of a dynamic-link library. See also: Environments

#### **Database File**

Specify the initial database file. If the HTTP Tunnel is enabled, you need to enter an absolute file path of the database file in your web server.

#### Endpoint

The Endpoint for connecting to the Amazon Web Services instance.

#### Host

A host name where the database is situated or the IP address of the server.

#### **Initial Database**

Set the initial database which user connects when making connection.

#### **OS** authentication

Use OS user login credentials to authenticate database users.

#### Password

Password for connecting to the database server.

#### Port

A TCP/IP port for connecting to the database server.

#### Role

Indicate that the database user is connecting with either the Default, SYSOPER or SYSDBA system privilege.

#### Sync User Name with Navicat Cloud

When editing a connection in Navicat Cloud, you can choose to synchronize the user name.

Туре

| Existing Database File | Connect to an existing database in the <b>Database File</b> . |
|------------------------|---|
| New SQLite 3           | Create a new SQLite 3 database in the Database File.          |
| New SQLite 2           | Create a new SQLite 2 database in the Database File.          |

#### User Name

User name for connecting to the database server.

#### MongoDB

To successfully establish a new connection to local/remote server - no matter via SSL or SSH, set the database login information in the General tab. If your Internet Service Provider (ISP) does not provide direct access to its server, Secure Tunneling Protocol (SSH) is another solution.

#### **Connection Name**

Enter a friendly name to best describe your connection.

#### Add To

After you logged in the Navicat Cloud feature, you can choose to save the connection to My Connections or a project in Navicat Cloud.

#### Connection

The type of your MongoDB server: Standalone, Shard Cluster or Replica Set.

#### SRV record

Check this option to connect the server using an SRV Record.

#### Host

A host name, IP address, or UNIX domain socket of the server.

#### Port

A TCP/IP port for connecting to the server.

#### Member

Add or remove the members of replica set or the instances of sharded cluster to the connection.

#### **Read Preference**

Choose the replica set read preference for this connection.

#### **Replica Set**

The name of the replica set.

#### Authentication

Choose the authentication mechanism that MongoDB will use to authenticate the connection.

| None     | No authentication.  |
|----------|---|
| Password | Specify the Authentication Database name associated with the User Name      |
|          | and <b>Password</b> .   |
| LDAP     | Specify the User Name and Password.   |
| Kerberos | Set the Kerberos Service Name and the user Principal. Enable Use            |
|          | canonicalized host name if you want the Kerberos service canonicalizes host |
|          | name.   |
| X.509    | x.509 certificate authentication.   |

#### Use MongoDB URI

You can also use a MongoDB URI to connect your MongoDB server. Simply click the **URI** button and paste the URI. Navicat will automatically fill out the options in the General, SSL and SSH tabs.

## **SSL** Settings

Secure Sockets Layer(SSL) is a protocol for transmitting private documents via the Internet. To get a secure connection, the first thing you need to do is to install OpenSSL Library and download Database Source.

Note: Available only for MySQL, PostgreSQL, MariaDB and MongoDB. Support from PostgreSQL 8.4 or later.

#### **MySQL and MariaDB Connections**

To provide authentication details, enable Use authentication and fill in the required information:

#### **Client Key**

The SSL key file in PEM format to use for establishing a secure connection.

#### **Client Certificate**

The SSL certificate file in PEM format to use for establishing a secure connection.

#### **CA Certificate**

The path to a file in PEM format that contains a list of trusted SSL certificate authorities.

#### Verify server certificate against CA

Check the server's Common Name value in the certificate that the server sends to the client.

#### **Specified Cipher**

A list of permissible ciphers to use for SSL encryption.

#### **PostgreSQL Connection**

#### Choose the SSL Mode:

| allow       | First try a non-SSL connection; if that fails, try an SSL connection.             |
|-------------|---|
| prefer      | First try an SSL connection; if that fails, try a non-SSL connection.             |
| require     | Only try an SSL connection.   |
| verify-ca   | Only try an SSL connection, and verify that the server certificate is issued by a |
|             | trusted CA.   |
| verify-full | Only try an SSL connection, verify that the server certificate is issued by a     |
|             | trusted CA and that the server hostname matches that in the certificate.          |

To provide authentication details, enable Use authentication and fill in the required information:

#### **Client Key**

The path of the client private key.

#### **Client Certificate**

The path of the client certificate.

#### **Root Certificate**

The path of the trusted certificate authorities.

#### **Certificate Revocation List**

The file path of the SSL certificate revocation list (CRL).

#### **MongoDB Connection**

To provide authentication details, enable Use authentication and fill in the required information:

#### **Client Key**

The SSL key file in PEM format to use for establishing a secure connection.

#### **Client Key Password**

The password of the key file.

#### Weak certificate validation

Check this option if your MongoDB server allows weak certificate validation.

#### **CA Certificate**

The path to a file in PEM format that contains a list of trusted SSL certificate authorities.

#### **Certificate Revocation List**

The file path of the SSL certificate revocation list (CRL).

#### Allow invalid host names

Check this option to allow invalid hostnames in SSL certificates.

## **SSH Settings**

**Secure SHell (SSH)** is a program to log in into another computer over a network, execute commands on a remote server, and move files from one machine to another. It provides strong authentication and secure encrypted communications between two hosts, known as **SSH Port Forwarding (Tunneling)**, over an insecure network. Typically, it is employed as an encrypted version of Telnet.

In a Telnet session, all communications, including username and password, are transmitted in plain-text, allowing anyone to listen-in on your session and steal passwords and other information. Such sessions are also susceptible to session hijacking, where a malicious user takes over your session once you have authenticated. SSH serves to prevent such vulnerabilities and allows you to access a remote server's shell without compromising security.

Note: Available only for MySQL, Oracle, PostgreSQL, SQL Server, MariaDB and MongoDB.

Please make sure that the parameter - "AllowTcpForwarding" in the Linux server must be set to value "yes", otherwise, the SSH port forwarding will be disabled. To look for the path: /etc/ssh/sshd\_config. By default, the SSH port forwarding should be enabled. Please double check the value settings.

Even the server support SSH tunnel, however, if the port forwarding being disabled, Navicat cannot connect via SSH Port 22.

#### Host

A host where SSH server is activated.

**Note:** The host name in the General tab should be set relatively to the SSH server which provided by your database hosting company.

#### Port

A port where SSH server is activated, by default it is 22.

#### **User Name**

A user on SSH server machine. (It is not a user of database server.)

### Sync User Name with Navicat Cloud

When editing a connection in Navicat Cloud, you can choose to synchronize the user name.

### **Authentication Method**

| Password   | Provide the SSH server user <b>Password</b> .   |
|------------|---|
| Public Key | Private Key   |
|            | It is used together with your public key. The private key should be readable only by you. |
|            | Passphrase  |
|            | A passphrase is exactly like a password, except that it applies to the keys you are       |
|            | generating and not an account.  |

#### Use compression

Request compression of all data (including stdin, stdout, stderr, and data for forwarded X11 and TCP connections). The compression algorithm is the same used by gzip(1), and the "level" can be controlled by the CompressionLevel option for protocol version 1.

**Note:** HTTP Tunnel and SSH Tunnel cannot be function simultaneously. The SSH Tunnel is disabled when you select the HTTP Tunnel and vice versa.

## **HTTP Settings**

HTTP Tunneling is a method for connecting to a server that uses the same protocol (http://) and the same port (port 80) as a web server does. It is used while your ISPs do not allow direct connections, but allows establishing HTTP connections.

Note: Available only for MySQL, PostgreSQL, SQLite and MariaDB.

### **Uploading the Tunneling Script**

To use this connection method, first thing you need to do is to upload the tunneling script to the web server where your server is located.

**Note:** Click the **Export Tunnel Script** button to extract the script file, **ntunnel\_mysql.php** (for both MySQL and MariaDB), **ntunnel\_pgsql.php** or **ntunnel\_sqlite.php**.

#### Setting up HTTP Tunnel

The following instruction guides you through the process of configuring a HTTP connection.

- 1. Select the HTTP tab and enable Use HTTP tunnel.
- 2. Enter URL of the tunneling script.

e.g. http://www.navicat.com/ntunnel\_mysql.php

- 3. If the tunneling script is hosted in a password protected server, you can provide the required authentication details.
- 4. If your server installed a Web Application Firewall, you can check the **Encode outgoing query with base64** option.
- 5. If you have to access internet over a proxy server, click the **Proxy Settings** button and provide the details.

**Note:** HTTP Tunnel and SSH Tunnel cannot be function simultaneously. The SSH Tunnel is disabled when you select the HTTP Tunnel and vice versa.

## **Advanced Settings**

Note: The following options depend on the connection server type and sort in ascending order.

### Auto connect

Open the connection at application startup automatically.

### **Client Character Set**

Choose the session client character set used in Navicat.

### Encoding

Choose a codepage for converting data to display in Navicat UI.

#### Encrypt

Enable this option and provide **Password** when connecting to an encrypted SQLite database.

#### Keepalive interval (sec)

Keep the connection with the server alive by pinging it. You can set the period between pings in the edit box.

### Limit connection sessions

Specify the maximum number of concurrent connections that the server allows.

#### **Settings Location**

When a new connection is being established, Navicat will create a subfolder under the Settings Location. Most files are stored within this subfolder:

| File in Settings Location | Server Type                   | File Extension |
|---------------------------|-------------------------------|----------------|
| Backup                    | MySQL, PostgreSQL, SQLite and | .nb3           |
|                           | MariaDB                       |                |
| Backup Profile            | MySQL                         | .nbakmysql     |

|                             | PostgreSQL                     | .nbakpgsql    |
|-----------------------------|--------------------------------|---------------|
|                             | SQLite                         | .nbaksqlite   |
|                             | SQL Server                     | .nbakmssql    |
|                             | MariaDB                        | .nbakmariadb  |
| Data Pump Export Profile    | Oracle                         | .nbakora      |
| ER Diagram File             | MySQL, Oracle, PostgreSQL,     | .ned          |
|                             | SQLite, SQL Server and MariaDB |               |
| Export Materialized View    | Oracle                         | .nexpmora     |
| Profile                     | PostgreSQL                     | .nexpmpgsql   |
| Export Query Result Profile | MySQL                          | .nexpqmysql   |
|                             | Oracle                         | .nexpqora     |
|                             | PostgreSQL                     | .nexpqpgsql   |
|                             | SQLite                         | .nexpqsqlite  |
|                             | SQL Server                     | .nexpqmssql   |
|                             | MariaDB                        | .nexpqmariadb |
|                             | MongoDB                        | .nexpqmongodb |
| Export Table/Collection     | MySQL                          | .nexptmysql   |
| Profile                     | Oracle                         | .nexptora     |
|                             | PostgreSQL                     | .nexptpgsql   |
|                             | SQLite                         | .nexptsqlite  |
|                             | SQL Server                     | .nexptmssql   |
|                             | MariaDB                        | .nexptmariadb |
|                             | MongoDB                        | .nexptmongodb |
| Export View Result Profile  | MySQL                          | .nexpvmysql   |
|                             | Oracle                         | .nexpvora     |
|                             | PostgreSQL                     | .nexpvpgsql   |
|                             | SQLite                         | .nexpvsqlite  |
|                             | SQL Server                     | .nexpvmssql   |
|                             | MariaDB                        | .nexpvmariadb |
|                             | MongoDB                        | .nexpvmongodb |
| Import Table/Collection     | MySQL                          | .nimpmysql    |
| Profile                     | Oracle                         | .nimpora      |
|                             | PostgreSQL                     | .nimppgsql    |
|                             | SQLite                         | .nimpsqlite   |
|                             | SQL Server                     | .nimpmssql    |
|                             | MariaDB                        | .nimpmariadb  |
|                             | MongoDB                        | .nimpmongodb  |
| MapReduce                   | MongoDB                        | .mapreduce    |
| Query                       | MySQL, Oracle, PostgreSQL,     | .sql          |
|                             | SQLite, SQL Server and MariaDB |               |
|                             | MongoDB                        | .js           |

|  | Schema Analysis | MongoDB | .nsatmongodb |
|--|-----------------|---------|--------------|
|--|-----------------|---------|--------------|

### **TDS Version**

Choose the TDS protocol version supported by your server if the connection runs into an incompatibility.

### **Use compression**

Use compression protocol. It is used if both client and server support zlib compression, and the client requests compression.

### Use socket file

Use socket file for localhost connection.

## **Databases Settings**

### MySQL, Oracle, PostgreSQL, SQL Server, MariaDB, MongoDB

In the **Databases** tab, you can set which databases will be shown in the Navigation pane when connecting to your server. It is not obligatory. To start working with custom database settings, check **Use custom database list**. Then, check the preferable databases in the **Name** column. If you want Navicat automatically open the databases at connection, check the **Auto Open** box.

### Add a hidden database to the list

- 1. Click the + button.
- 2. Enter the database name.
- 3. Check the newly added database in the database list.

### Remove a database from the list

- 1. Select the database in the database list.
- 2. Click the button.

Note: The database will be just removed from the database list box, it will still exist in the server.

#### **SQLite**

In the **Databases** tab, you can attach SQLite database files to the connection. Click the + button and enter the information:

| Option        | Description  |
|---------------|--|
| Database Name | Enter the database name which displays in Navicat. |
| Database File | Choose the file path of a database file.           |

| Encrypt | Check this option and provide the <b>Password</b> if the database file is encrypted. |
|---------|--|
|---------|--|

To detach a database, select it from the list and click the - button.

# **Chapter 5 - Server Objects**

## About Server Objects

Navicat provides powerful tools to manage server objects, such as databases, tables, views, functions, etc.

Some server objects may have been hidden by Navicat. These objects include system databases, system tables and so on. To show the hidden items, choose **View** -> **Show Hidden Items** from the menu bar.

Note: Before working with the server objects in Navicat, you should establish the connection first.

In object designers, you can preview the necessary SQL statements or scripts for creating or editing the object on the **SQL Preview** or **Script Preview** tab. For some database or schema objects, you can use the bottom drop-down menu to show the SQL or scripts which will be run when choosing **Save** or **Save As** from the **File** menu.

## MySQL / MariaDB

### Databases

To start working with the server objects, you should create and open a connection. If the server is empty, you need to create a new database.

### Create a new database

- 1. In the Navigation pane, control-click your connection and select New Database.
- 2. Enter the database properties in the pop-up window.

### Edit an existing database

- 1. In the Navigation pane, control-click a database and select Edit Database.
- 2. Edit the database properties in the pop-up window.

**Note:** MySQL does not support renaming database through its interface at this moment. Access the directory in which databases being stored. By default, all databases store within a directory called data under MySQL Installation folder. For example: /usr/local/mysql5/data. You must stop MySQL before you can rename the database.

### Tables

Tables are database objects that contain all data in a database. A table is a set of rows and columns, and their intersections are fields. In the main window, click **Table** to open the table object list.

There are two ways to open a table with graphical fields, control-click a table and select:

| Option     | Description  |
|------------|--|
| Open Table | Navicat loads all your BLOB fields (images) while opening the table. |

| Open Table (Quick) | Faster performance for opening the graphical table, as BLOB fields (images) will      |
|--------------------|---|
|                    | not be loaded until you click on the cell. (It is invisible by default until you hold |
|                    | down the OPTION key when choosing the pop-up menu.)                                   |

You can create a table shortcut by dragging the table out. It provides a convenient way for you to open your table for entering data directly without activating the Navicat main window.

To empty a table, control-click the selected table and select **Empty Table** from the pop-up menu. This option is only applied when you wish to clear all the existing records without resetting the auto-increment value. To reset the auto-increment value while emptying your table, use **Truncate Table**.

### **Table Designer**

**Table Designer** is the basic Navicat tool for working with tables. It allows you to create, edit and drop table's fields, indexes, foreign keys, and much more.

In the **Fields** tab, you can search a field name by choosing **Edit** -> **Find** -> **Find** or pressing COMMAND-F. You can change the order of a field, simply drag and drop it to the desired location.

Note: The tabs and options in the designer depend on the server type and version.

#### **Table Viewer**

When you open a table, **Table Viewer** displays data as a grid. Data can be displayed in two modes: Grid View and Form View. See Data Viewer for details.

Note: Transaction is only available for INNODB tables.

### Views

A view allows users to access a set of tables as if it is a single table. You can use views to restrict access to rows. In the main window, click 🐱 **View** to open the view object list.

You can create a view shortcut by dragging the view out. It provides a convenient way for you to open your view without activating the Navicat main window.

#### **View Designer**

**View Designer** is the basic Navicat tool for working with views. You can edit the view definition as SQL statement (SELECT statement it implements) in the **SQL Editor** tab. To customize the view of the editor and find out more features for SQL editing, see SQL Editor for details. If you want to load SQL statement from a SQL file to the editor, you can choose **File** -> **Import SQL**.

| Button | Description                      |
|--------|----------------------------------|
| 2      | Preview the data of the view.    |
|        | Show the Query Plan of the view. |
|        | Stop the preview process.        |

| ≣-≣ | Build the view visually. It allows you to create and edit views without knowledge of SQL. |
|-----|---|
|     | See SQL Builder for details.  |
| Ē   | Format the codes with the Beautify SQL settings in Editor.                                |

Hint: You can choose to show the preview results below the editor or in a new tab by choosing View -> Results -> Show Below Editor or Show in New Page.

### **View Viewer**

When you open a view, **View Viewer** displays data as a grid. Data can be displayed in two modes: Grid View and Form View. See Data Viewer for details.

Note: Transaction is only available for updatable views.

### **Procedures / Functions**

Procedures and functions (stored routines) are supported in MySQL 5.0. A stored routine is a set of SQL statements that can be stored in the server. In the main window, click  $f_{\alpha}$  Function to open the function object list.

### **Function Wizard**

Click from the object toolbar. Function Wizard will pop up and it allows you to create a function easily.

- 1. Select the type of the routine: **Procedure** or **Function**.
- 2. Define the parameters. Set the Mode, Name and Type under the corresponding columns.
- 3. If you create a function, select the Return Type.
- 4. Select the additional function options.

Hint: Once click the Skip button, you can go to Preferences to enable the function wizard.

#### **Function Designer**

**Function Designer** is the basic Navicat tool for working with procedures/functions. You can enter a valid SQL statement in the **Definition** tab. This can be a simple statement such as SELECT or INSERT, or it can be a compound statement written using BEGIN and END. Compound statements can contain declarations, loops, and other control structure statements. To customize the view of the editor and find out more features for SQL editing, see SQL Editor for details.

#### Results

To execute the procedure/function, click  $\blacktriangleright$  on the toolbar. If the SQL statement is correct, the statement will be executed and, if the statement is supposed to return data, the **Result** tab opens with the data returned. If an error occurs while executing the procedure/function, execution stops, the appropriate error message is displayed. If the procedure/function requires input parameters, the **Input Parameters** dialog will pop up. Check the **Raw Mode** option to pass the inputted values to the procedure/function without quotation marks.

Note: Navicat supports to return 20 result sets.

### Tablespaces

An InnoDB general tablespace is a shared tablespace which can hold multiple tables, and supports all table row formats. An InnoDB undo tablespace contains undo logs. In MySQL NDB Cluster, tablespace can contain one or more data files, providing storage space for NDB Cluster Disk Data table. In the main window, click **Chers** -> **Tablespace** to open the tablespace object list.

#### **Tablespace Designer**

**Tablespace Designer** is the basic Navicat tool for working with tablespaces. It allows you to set the table engine, specify the data file, etc.

### **Events**

An event is a task that run according to a schedule. In the main window, click **4** Others -> **9** Event to open the event object list.

### **Event Designer**

**Event Designer** is the basic Navicat tool for working with events. You can enter a valid SQL procedure statement in the **Definition** tab. This can be a simple statement such as SELECT or INSERT, or it can be a compound statement written using BEGIN and END. Compound statements can contain declarations, loops, and other control structure statements. To customize the view of the editor and find out more features for SQL editing, see SQL Editor for details.

### **Maintain Objects**

Navicat provides a complete solution for maintaining MySQL / MariaDB objects.

- 1. In the main window, select objects in the Navigation pane or the Objects tab.
- 2. Control-click the selected objects.
- 3. Choose **Maintain**, and then choose a maintain option the from the pop-up menu.
- 4. Results show in a pop-up window.

#### **Table**

| Option         | Description  |
|----------------|--|
| Analyze Table  | Analyze and store the key distribution for the table.                  |
| Check Table    | Check the table for errors.  |
| Optimize Table | Optimize the table to reduce storage space and improve I/O efficiency. |
| Repair Table   | Repair the possibly corrupted table.                                   |
| Get Rows Count | Count the number of rows in the table.                                 |

### **Tablespace**

| Option       | Description                                 |
|--------------|---|
| Set Active   | Mark an InnoDB undo tablespace as active.   |
| Set Inactive | Mark an InnoDB undo tablespace as inactive. |

## Oracle

### Schemas

To start working with the server objects, you should create and open a connection. When you create a user account, you are also implicitly creating a schema for that user. A schema is a logical container for the database objects (such as tables, views, triggers, and so on) that the user creates. The schema name is the same as the user name, and can be used to unambiguously refer to objects owned by the user.

**Hint:** Oracle interprets non-quoted object identifiers as uppercase. In Navicat, all object identifiers will be quoted. That is, Navicat saves exactly what you have inputted.

### Tables

Tables are database objects that contain all data in a database. A table is a set of rows and columns, and their intersections are fields. In the main window, click **Table** to open the table object list.

You can create **Normal** / **External** / **Index Organized** tables. To create a new normal table, simply click from the object toolbar. Or, you can click and hold the 👪 button and choose the table type.

There are two ways to open a table with graphical fields, control-click a table and select:

| Option             | Description   |
|--------------------|---|
| Open Table         | Navicat loads all your BLOB fields (images) while opening the table.                    |
| Open Table (Quick) | Faster performance for opening the graphical table, as BLOB fields (images) will not be |
|                    | loaded until you click on the cell. (It is invisible by default until you hold down the |
|                    | OPTION key when choosing the pop-up menu.)  |

You can create a table shortcut by dragging the table out. It provides a convenient way for you to open your table for entering data directly without activating the Navicat main window.

To empty a table, control-click the selected table and select **Empty Table** from the pop-up menu. This option is only applied when you wish to clear all the existing records without resetting the auto-increment value. To reset the auto-increment value while emptying your table, use **Truncate Table**.

### **Table Designer**

**Table Designer** is the basic Navicat tool for working with tables. It allows you to create, edit and drop table's fields, indexes, foreign keys, and much more.

In the **Fields** tab, you can search a field name by choosing **Edit** -> **Find** -> **Find** or pressing COMMAND-F. You can change the order of a field when creating new tables, simply drag and drop it to the desired location.

Note: The tabs and options in the designer depend on the server version and the table type.

#### **Table Viewer**

When you open a table, **Table Viewer** displays data as a grid. Data can be displayed in two modes: Grid View and Form View. See Data Viewer for details.

### Views

A view allows users to access a set of tables as if it is a single table. You can use views to restrict access to rows. In the main window, click 🐱 **View** to open the view object list.

You can create a view shortcut by dragging the view out. It provides a convenient way for you to open your view without activating the Navicat main window.

#### **View Designer**

**View Designer** is the basic Navicat tool for working with views. You can edit the view definition as SQL statement (SELECT statement it implements) in the **SQL Editor** tab. To customize the view of the editor and find out more features for SQL editing, see SQL Editor for details. If you want to load SQL statement from a SQL file to the editor, you can choose **File** -> **Import SQL**.

| Button | Description   |
|--------|---|
| 28     | Preview the data of the view.   |
|        | Show the Query Plan of the view.  |
|        | Stop the preview process.   |
| 8-8    | Build the view visually. It allows you to create and edit views without knowledge of SQL. |
|        | See SQL Builder for details.  |
| ĒN     | Format the codes with the Beautify SQL settings in Editor.                                |

Hint: You can choose to show the preview results below the editor or in a new tab by choosing View -> Results -> Show Below Editor or Show in New Page.

#### **View Viewer**

When you open a view, **View Viewer** displays data as a grid. Data can be displayed in two modes: Grid View and Form View. See Data Viewer for details.

### **Materialized Views**

Materialized Views are schema objects that used to summarize, compute, replicate, and distribute data. In the main window, click B Materialized View to open the materialized view object list.

You can create a materialized view shortcut by dragging the materialized view out. It provides a convenient way for you to open your materialized view without activating the Navicat main window.

To refresh a materialized view, control-click it in the Objects tab and select **Refresh Materialized View** from the pop-up menu.

### **Materialized View Designer**

**Materialized View Designer** is the basic Navicat tool for working with materialized views. You can edit the view definition as SQL statement (SELECT statement it implements) in the **SQL Editor** tab. To customize the view of the editor and find out more features for SQL editing, see SQL Editor for details. If you want to load SQL statement from a SQL file to the editor, you can choose **File** -> **Import SQL**.

| Button | Description   |
|--------|---|
| 2      | Preview the data of the materialized view.  |
|        | Show the Query Plan of the materialized view.   |
|        | Stop the preview process.   |
| 8      | Build the materialized view visually. It allows you to create and edit materialized views |
|        | without knowledge of SQL. See SQL Builder for details.                                    |
| Ē      | Format the codes with the Beautify SQL settings in Editor.                                |

Hint: You can choose to show the preview results below the editor or in a new tab by choosing View -> Results -> Show Below Editor or Show in New Page.

### **Materialized View Viewer**

When you open a materialized view, **Materialized View Viewer** displays data as a grid. Data can be displayed in two modes: Grid View and Form View. See Data Viewer for details.

### **Procedures / Functions**

Procedures and functions are schema objects that consist a set of SQL statements and stored in the server. In the main window, click  $f_{(x)}$  Function to open the function object list.

### **Function Wizard**

Click 🌆 from the object toolbar. Function Wizard will pop up and it allows you to create a function easily.

- 1. Select the type of the routine: **Procedure** or **Function**.
- 2. Define the parameters. Set the Mode, Name, Type Schema and Type under the corresponding columns.
- 3. If you create a function, select the **Return Type**.
- 4. Select the additional function options.

Hint: Once click the Skip button, you can go to Preferences to enable the function wizard.

### **Function Designer**

**Function Designer** is the basic Navicat tool for working with procedures/functions. You can enter a valid SQL statement in the **Definition** tab. To customize the view of the editor and find out more features for SQL editing, see SQL Editor for details.

The **Code Outline** pane displays information about the procedure/function including parameters, code body, etc. If the Code Outline pane is hidden, choose **View** -> **Code Outline**.

Note: Available only in Non-Essentials Edition.

| Button         | Description                               |
|----------------|---|
| С              | Refresh the code outline.                 |
| Q              | Turn mouse over highlight on or off.      |
| ₹=<br>₹=       | Show the detail view of the code outline. |
| t≣             | Toggle sorting by position.               |
|                | Expand the selected item.                 |
| Ξ <sub>1</sub> | Collapse the selected item.               |

#### Results

To execute the procedure/function, click  $\blacktriangleright$  on the toolbar. If the SQL statement is correct, the statement will be executed and, if the statement is supposed to return data, the **DBMS Output** tab opens with the data returned. If an error occurs while executing the procedure/function, execution stops, the appropriate error message is displayed. If the procedure/function requires input parameters, the **Input Parameters** dialog will pop up. Check the **Raw Mode** option to pass the inputted values to the procedure/function without quotation marks.

Note: Navicat supports to return 20 result sets.

#### Debug (Available only in Non-Essentials Edition)

You can add/remove breakpoints for debugging by clicking 🔎 in the grey area beside each statement.

Click 💿 on the toolbar to launch the Oracle Debugger. Enter the input parameters if necessary.

### Packages

Packages are encapsulated collections of related procedures, stored functions, and other program objects stored together in the database. An package consists of two parts: a specification and a body. In the main window, click Others -> Package to open the package object list.

### Package Designer & Package Body Designer

**Package Designer** and **Package Body Designer** are the basic Navicat tools for working with packages. After saving the package in Package Designer, you can edit its package body by clicking .

Likewise, you can edit its package specification by clicking 🎐 in Package Body Designer.

You can enter a valid SQL statement in the **Definition** tab. To customize the view of the editor and find out more features for SQL editing, see SQL Editor for details.

The **Code Outline** pane displays information about the package/package body including function, procedure, parameter, code body, etc. If the Code Outline pane is hidden, choose **View** -> **Code Outline**.

Note: Available only in Non-Essentials Edition.

| Button         | Description                               |
|----------------|---|
| С              | Refresh the code outline.                 |
| Q              | Turn mouse over highlight on or off.      |
| ▼=<br>▼=       | Show the detail view of the code outline. |
| t≣             | Toggle sorting by position.               |
|                | Expand the selected item.                 |
| Ξ <sub>X</sub> | Collapse the selected item.               |

### **Results**

To execute the package, click on the toolbar. If the SQL statement is correct, the statement will be executed and, if the statement is supposed to return data, the **DBMS Output** tab opens with the data returned. If an error occurs while executing the package, execution stops, the appropriate error message is displayed. If the package requires input parameters, the **Input Parameters** dialog will pop up.

### Debug (Available only in Non-Essentials Edition)

You can add/remove breakpoints for debugging by clicking 🔎 in the grey area beside each statement.

Click 🐱 on the toolbar to launch the Oracle Debugger. Enter the input parameters if necessary.

### **Recycle Bin**

Recycle bin contains dropped tables and any associated objects such as indexes, constraints, nested tables. In the main window, click 4 Others -> 3 Recycle Bin to open the recycle bin object list.

### **Restore a table**

- 1. Select a table in the Objects tab.
- 2. Click 🗔.

### Remove an object

- 1. Select an object for purging in the Objects tab.
- 2. Click 🔤.
- 3. Confirm deleting in the dialog window.

### **Remove all objects**

- 1. Control-click anywhere in the Objects tab and select **Purge Recycle Bin** from the pop-up menu.
- 2. Confirm deleting in the dialog window.

#### Remove all objects of any users

- 1. Log in a user with SYSDBA privilege.
- 2. Control-click anywhere in the Objects tab and select **Purge DBA Recycle Bin** from the pop-up menu.
- 3. Confirm deleting in the dialog window.

### **Other Objects**

Navicat also allows you to manage other Oracle objects: Database Link, Index, Java, Materialized View Log, Sequence, Synonym, Trigger, Type, XML Schema, Directory, Public Database Link, Public Synonym and Tablespace. In the main window, click **Others** and select an object to open the object list.

### **Maintain Objects**

Navicat provides a complete solution for maintaining Oracle objects.

- 1. In the main window, select objects in the Navigation pane or the Objects tab.
- 2. Control-click the selected objects.
- 3. Choose **Maintain**, and then choose a maintain option the from the pop-up menu.
- 4. Results show in a pop-up window.

### Table

| Option                   | Description   |
|--------------------------|---|
| Enable Table Lock        | Allow DDL operations on the table.                                  |
| Disable Table Lock       | Prevent DDL operations on the table.                                |
| Enable Row Movement      | Allow the database to move a row, thus changing the rowid.          |
| Disable Row Movement     | Prevent the database from moving a row, thus preventing a change of |
|                          | rowid.  |
| Shrink Space             | Shrink space in the table.  |
| Move                     | Relocate data of the table.   |
| Validate Table Structure | Verify the integrity of the structure of the table.                 |
| Collect Table Statistics | Analyze the contents of the table.                                  |

#### View

| Option  | Description                               |
|---------|---|
| Compile | Recompile the view specification or body. |

### **Procedure / Function**

| Option            | Description  |
|-------------------|--|
| Compile           | Recompile the specification or body.                                 |
| Compile for Debug | Recompile the specification or body. Instruct the PL/SQL compiler to |
|                   | generate and store the code for use by the debugger.                 |

### Index

| Option                   | Description   |
|--------------------------|---|
| Rebuild Index            | Re-create the index or one of its partitions or subpartitions.              |
| Make Index Unusable      | Make the index unusable.  |
| Coalesce Index           | Merge the contents of index blocks where possible to free blocks for reuse. |
| Compute Index Statistics | Compute the statistics of the index.  |

### Java

| Option                  | Description                                    |
|-------------------------|--|
| Compile or Resolve      | Resolve the primary Java class schema object.  |
| Set AuthID Current User | Set the invoker rights to AUTHID CURRENT_USER. |
| Set AuthID Definer      | Set the invoker rights to AUTHID DEFINER.      |

### **Materialized View**

| Option               | Description   |
|----------------------|---|
| Enable Row Movement  | Allow the database to move a row, thus changing the rowid.          |
| Disable Row Movement | Prevent the database from moving a row, thus preventing a change of |
|                      | rowid.  |
| Shrink Space         | Compact the materialized view segment.                              |
| Compile              | Revalidate the materialized view.                                   |
| Force Refresh        | Refresh the materialized view.                                      |

### **Materialized View Log**

| Option               | Description   |
|----------------------|---|
| Enable Row Movement  | Allow the database to move a row, thus changing the rowid.          |
| Disable Row Movement | Prevent the database from moving a row, thus preventing a change of |
|                      | rowid.  |
| Shrink Space         | Compact the materialized view log segments.                         |

### Package

| Option            | Description   |
|-------------------|---|
| Compile           | Recompile the package specification and body.                     |
| Compile for Debug | Recompile the package specification and body. Instruct the PL/SQL |
|                   | compiler to generate and store the code for use by the debugger.  |

### Trigger

| Option            | Description   |
|-------------------|---|
| Compile           | Recompile the trigger.  |
| Compile for Debug | Recompile the trigger. Instruct the PL/SQL compiler to generate and store |
|                   | the code for use by the debugger.   |
| Enable Trigger    | Enable the trigger.   |

| Disable Trigger | Disable the trigger. |
|-----------------|----------------------|
|-----------------|----------------------|

### Туре

| Option            | Description   |
|-------------------|---|
| Compile           | Recompile the type specification and body.                              |
| Compile for Debug | Recompile the type specification and body. Instruct the PL/SQL compiler |
|                   | to generate and store the code for use by the debugger.                 |

### XML Schema

| Option           | Description   |
|------------------|---|
| Compile          | Recompile the already registered XML schema.          |
| Purge XML Schema | Removes the XML schema completely from Oracle XML DB. |

### **Tablespace**

| Option       | Description   |
|--------------|---|
| Read Only    | Place the tablespace in transition read-only mode.                          |
| Read Write   | Allow write operations on a previously read-only tablespace.                |
| Online       | Take the tablespace online.   |
| Offline      | Take the tablespace offline.  |
| Coalesce     | Combine all contiguous free extents into larger contiguous extents for each |
|              | datafile in the tablespace.   |
| Shrink Space | Reduce the amount of space the tablespace is taking.                        |

## PostgreSQL

### Databases & Schemas

To start working with the server objects, you should create and open a connection. If the server is empty, you need to create a new database and/or a new schema.

### Create a new database

- 1. In the Navigation pane, control-click a connection and select **New Database**.
- 2. Enter the database properties in the pop-up window.

### Edit an existing database

- 1. In the Navigation pane, control-click a database and select **Edit Database**.
- 2. Edit the database properties in the pop-up window.

### Create a new schema

1. In the Navigation pane, control-click a database and select **New Schema**.

2. Enter the schema properties in the pop-up window.

#### Edit an existing schema

- 1. In the Navigation pane, control-click a schema and select Edit Schema.
- 2. Edit the schema properties in the pop-up window.

### **Tables**

Tables are database objects that contain all data in a database. A table is a set of rows and columns, and their intersections are fields. In the main window, click **Table** to open the table object list.

You can create **Normal** / **Foreign** / **Partitioned** tables. To create a new normal table, simply click  $\blacksquare$  from the object toolbar. Or, you can click and hold the  $\blacksquare$  button and choose the table type.

There are two ways to open a table with graphical fields, control-click a table and select:

| Option             | Description   |
|--------------------|---|
| Open Table         | Navicat loads all your BLOB fields (images) while opening the table.                    |
| Open Table (Quick) | Faster performance for opening the graphical table, as BLOB fields (images) will not be |
|                    | loaded until you click on the cell. (It is invisible by default until you hold down the |
|                    | OPTION key when choosing the pop-up menu.)  |

You can create a table shortcut by dragging the table out. It provides a convenient way for you to open your table for entering data directly without activating the Navicat main window.

To empty a table, control-click the selected table and select **Empty Table** from the pop-up menu. This option is only applied when you wish to clear all the existing records without resetting the auto-increment value. To reset the auto-increment value while emptying your table, use **Truncate Table**.

### **Table Designer**

**Table Designer** is the basic Navicat tool for working with tables. It allows you to create, edit and drop table's fields, indexes, foreign keys, and much more.

In the Fields tab, you can search a field name by choosing Edit -> Find -> Find or pressing COMMAND-F.

Note: The tabs and options in the designer depend on the server version and the table type.

#### **Table Viewer**

When you open a table, **Table Viewer** displays data as a grid. Data can be displayed in two modes: Grid View and Form View. See Data Viewer for details.

### Views

A view allows users to access a set of tables as if it is a single table. You can use views to restrict access to rows. In the main window, click 🐱 View to open the view object list.

You can create a view shortcut by dragging the view out. It provides a convenient way for you to open your view without activating the Navicat main window.

### **View Designer**

**View Designer** is the basic Navicat tool for working with views. You can edit the view definition as SQL statement (SELECT statement it implements) in the **SQL Editor** tab. To customize the view of the editor and find out more features for SQL editing, see SQL Editor for details. If you want to load SQL statement from a SQL file to the editor, you can choose **File** -> **Import SQL**.

| Button     | Description   |
|------------|---|
| 28         | Preview the data of the view.   |
|            | Show the Query Plan of the view.  |
|            | Stop the preview process.   |
| <u>=</u> - | Build the view visually. It allows you to create and edit views without knowledge |
|            | of SQL. See SQL Builder for details.  |
| Ē          | Format the codes with the Beautify SQL settings in Editor.                        |

Hint: You can choose to show the preview results below the editor or in a new tab by choosing View -> Results -> Show Below Editor or Show in New Page.

### **View Viewer**

When you open a view, **View Viewer** displays data as a grid. Data can be displayed in two modes: Grid View and Form View. See Data Viewer for details.

### **Materialized Views**

Materialized Views are schema objects that used to summarize, compute, replicate, and distribute data. In the main window, click B Materialized View to open the materialized view object list.

You can create a materialized view shortcut by dragging the materialized view out. It provides a convenient way for you to open your materialized view without activating the Navicat main window.

To refresh and completely replace the contents of a materialized view, control-click it in the Objects tab and select **Refresh Materialized View With -> Data** or **No Data** from the pop-up menu.

### **Materialized View Designer**

**Materialized View Designer** is the basic Navicat tool for working with materialized views. You can edit the view definition as SQL statement (SELECT statement it implements) in the **SQL Editor** tab. To customize the view of the editor and find out more features for SQL editing, see SQL Editor for details. If you want to load SQL statement from a SQL file to the editor, you can choose **File** -> **Import SQL**.

| Button   | Description                                   |
|----------|---|
| <u>8</u> | Preview the data of the materialized view.    |
|          | Show the Query Plan of the materialized view. |

|      | Stop the preview process.   |
|------|---|
|      | Build the materialized view visually. It allows you to create and edit materialized |
|      | views without knowledge of SQL. See SQL Builder for details.                        |
| huli | Format the codes with the Beautify SQL settings in Editor.                          |

Hint: You can choose to show the preview results below the editor or in a new tab by choosing View -> Results -> Show Below Editor or Show in New Page.

### **Materialized View Viewer**

When you open a materialized view, **Materialized View Viewer** displays data as a grid. Data can be displayed in two modes: Grid View and Form View. See Data Viewer for details.

### **Procedures / Functions**

Procedures and functions are schema objects that consist a set of SQL statements and stored in the server. Procedures are supported in PostgreSQL 11. In the main window, click  $f_{\infty}$  Function to open the function object list.

### **Function Wizard**

Click 🌆 from the object toolbar. Function Wizard will pop up and it allows you to create a function easily.

- 1. Select the type of the routine: **Procedure** or **Function**.
- 2. Define the parameters. Set the **Mode**, **Name**, **Type Schema**, **Type** and **Default Value** under the corresponding columns.
- 3. If you create a function, select the **Return Type**.
- 4. Select the additional function options.

Hint: Once click the Skip button, you can go to Preferences to enable the function wizard.

#### **Function Designer**

**Function Designer** is the basic Navicat tool for working with procedures/functions. You can enter a valid SQL statement in the **Definition** tab. This can be a simple statement such as SELECT or INSERT, or it can be a compound statement written using BEGIN and END. To customize the view of the editor and find out more features for SQL editing, see SQL Editor for details.

#### **Results**

To execute the procedure/function, click F on the toolbar. If the SQL statement is correct, the statement will be executed and, if the statement is supposed to return data, the **Result** tab opens with the data returned. If an error occurs while executing the procedure/function, execution stops, the appropriate error message is displayed. If the procedure/function requires input parameters, the **Input Parameters** dialog will pop up. Check the **Raw Mode** option to pass the inputted values to the procedure/function without quotation marks.

Note: Navicat supports to return 20 result sets.

#### Debug (Available only in Non-Essentials Edition)

Before debugging PL/pgSQL procedures/functions, you need to install the pldbgapi extension or enable the debugger plugin manually in the server.

Then, open a PL/pgSQL procedure/function. You can add/remove breakpoints for debugging by clicking 
 in the
 grey area beside each statement.

Click 🐱 on the toolbar to launch the PostgreSQL Debugger. Enter the input parameters if necessary.

### **Types**

Types register new data types for use in the current database. In the main window, click **Chers** -> **Type** to open the type object list.

You can create **Base** / **Composite** / **Enum** / **Range** types. To create a new base type, simply click <sup>30</sup> from the object toolbar. Or, you can click and hold the <sup>30</sup> button and choose the type.

#### **Type Designer**

**Type Designer** is the basic Navicat tool for working with types. It allows you to create or edit a type.

Note: The tabs and options in the designer depend on the server version and the type you are chosen.

### **Foreign Servers**

A foreign server typically encapsulates connection information that a foreign-data wrapper uses to access an external data resource. In the main window, click 4 Others -> Foreign Server to open the foreign server object list.

To install the postgres\_fdw extension for accessing data stored in external PostgreSQL servers, you can control-click anywhere in the foreign server object list and select **Install postgres\_fdw Extension**.

#### **Foreign Server Designer**

**Foreign Server Designer** is the basic Navicat tool for working with foreign servers. It allows you to create or edit a foreign server.

### **Other Objects**

Navicat also allows you to manage other PostgreSQL objects: Aggregate, Conversion, Domain, Index, Operator, Operator Class, Sequence, Trigger, Tablespace, Cast and Language. In the main window, click **Others** and select an object to open the object list.

### **Maintain Objects**

Navicat provides a complete solution for maintaining PostgreSQL objects.

- 1. In the main window, select objects in the Navigation pane or the Objects tab.
- 2. Control-click the selected objects.
- 3. Choose Maintain, and then choose a maintain option the from the pop-up menu.
- 4. Results show in a pop-up window.

### Database

| Option           | Description  |
|------------------|--|
| Allow            | Users can connect to the database.                   |
| Disallow         | No users can connect to the database.                |
| Analyze Database | Collect statistics about the database.               |
| Vacuum Database  | Garbage-collect and optionally analyze the database. |
| Reindex Database | Recreate all indexes within the database.            |

### Table

| Option        | Description   |
|---------------|---|
| Analyze Table | Collect statistics about the contents of the table. |
| Vacuum Table  | Garbage-collect and optionally analyze the table.   |
| Reindex Table | Recreate all indexes of the table.                  |

## SQL Server

### Databases & Schemas

To start working with the server objects, you should create and open a connection. If the server is empty, you need to create a new database and/or a new schema.

### Create a new database

- 1. In the Navigation pane, control-click a connection and select **New Database**.
- 2. Enter the database properties in the pop-up window.

### Edit an existing database

- 1. In the Navigation pane, control-click a database and select Edit Database.
- 2. Edit the database properties in the pop-up window.

### Create a new schema

- 1. In the Navigation pane, control-click a database and select **New Schema**.
- 2. Enter the schema properties in the pop-up window.

### Edit an existing schema

- 1. In the Navigation pane, control-click a schema and select Edit Schema.
- 2. Edit the schema properties in the pop-up window.

### **Tables**

Tables are database objects that contain all data in a database. A table is a set of rows and columns, and their intersections are fields. In the main window, click **Table** to open the table object list.

There are two ways to open a table with graphical fields, control-click a table and select:

| Option             | Description  |  |
|--------------------|--|--|
| Open Table         | Navicat loads all your BLOB fields (images) while opening the table.                       |  |
| Open Table (Quick) | Faster performance for opening the graphical table, as BLOB fields (images) will not       |  |
|                    | be loaded until you click on the cell. (It is invisible by default until you hold down the |  |
|                    | OPTION key when choosing the pop-up menu.)   |  |

You can create a table shortcut by dragging the table out. It provides a convenient way for you to open your table for entering data directly without activating the Navicat main window.

To empty a table, control-click the selected table and select **Empty Table** from the pop-up menu. This option is only applied when you wish to clear all the existing records without resetting the auto-increment value. To reset the auto-increment value while emptying your table, use **Truncate Table**.

#### **Table Designer**

**Table Designer** is the basic Navicat tool for working with tables. It allows you to create, edit and drop table's fields, indexes, foreign keys, and much more.

In the Fields tab, you can search a field name by choosing Edit -> Find -> Find or pressing COMMAND-F.

Note: The tabs and options in the designer depend on the server version.

#### **Table Viewer**

When you open a table, **Table Viewer** displays data as a grid. Data can be displayed in two modes: Grid View and Form View. See Data Viewer for details.

### Views

A view allows users to access a set of tables as if it is a single table. You can use views to restrict access to rows. In the main window, click 💀 View to open the view object list.

You can create a view shortcut by dragging the view out. It provides a convenient way for you to open your view without activating the Navicat main window.

### **View Designer**

View Designer is the basic Navicat tool for working with views. You can edit the view definition as SQL statement (SELECT statement it implements) in the SQL Editor tab. To customize the view of the editor and find out more features for SQL editing, see SQL Editor for details. If you want to load SQL statement from a SQL file to the editor, you can choose File -> Import SQL.

| Button | Description  |
|--------|--|
| 28     | Preview the data of the view.  |
|        | Show the Query Plan of the view.   |
|        | Stop the preview process.  |
|        | Build the view visually. It allows you to create and edit views without knowledge of |
|        | SQL. See SQL Builder for details.  |
| Ē      | Format the codes with the Beautify SQL settings in Editor.                           |

Hint: You can choose to show the preview results below the editor or in a new tab by choosing View -> Results -> Show Below Editor or Show in New Page.

#### **View Viewer**

When you open a view, **View Viewer** displays data as a grid. Data can be displayed in two modes: Grid View and Form View. See Data Viewer for details.

### **Procedures / Functions**

Procedures and functions are schema objects that consist a set of SQL statements and stored in the server. In the main window, click  $f_{(x)}$  Function to open the function object list.

#### **Function Wizard**

Click 🌆 from the object toolbar. Function Wizard will pop up and it allows you to create a function easily.

- 1. Select the type of the routine: **Procedure** or **Function**.
- 2. Define the parameters. Set the **Name**, **Type Schema**, **Type**, **Default Value**, **Output** and **Read Only** under the corresponding columns.
- 3. If you create a function, select the Return Type.
- 4. Select the additional function options.

Hint: Once click the Skip button, you can go to Preferences to enable the function wizard.

### **Function Designer**

**Function Designer** is the basic Navicat tool for working with procedures/functions. You can enter a valid SQL statement in the **Definition** tab. To customize the view of the editor and find out more features for SQL editing, see SQL Editor for details.

The **Code Outline** pane displays information about the procedure/function including parameters, code body, etc. If the Code Outline pane is hidden, choose **View** -> **Code Outline**.

Note: Available only in Non-Essentials Edition.

| Button         | Description                               |
|----------------|---|
| C              | Refresh the code outline.                 |
| Q              | Turn mouse over highlight on or off.      |
| *=<br>*=       | Show the detail view of the code outline. |
| t≣             | Toggle sorting by position.               |
| <b>±</b> *     | Expand the selected item.                 |
| Ξ <sub>I</sub> | Collapse the selected item.               |

### **Results**

To execute the procedure/function, click  $\blacktriangleright$  on the toolbar. If the SQL statement is correct, the statement will be executed and, if the statement is supposed to return data, the **Result** tab opens with the data returned. If an error occurs while executing the procedure/function, execution stops, the appropriate error message is displayed. If the procedure/function requires input parameters, the **Input Parameters** dialog will pop up. Check the **Raw Mode** option to pass the inputted values to the procedure/function without quotation marks.

Note: Navicat supports to return 20 result sets.

### **Other Objects**

Navicat also allows you to manage other SQL Server objects: Index, Synonym, Trigger, Backup Device, Linked Server, Server Trigger, Assembly, Database Trigger, Partition Function and Partition Scheme. In the main window, click **Others** and select an object to open the object list.

### **Maintain Objects**

Navicat provides a complete solution for maintaining SQL Server objects.

- 1. In the main window, select objects in the Navigation pane or the Objects tab.
- 2. Control-click the selected objects.
- 3. Choose **Maintain**, and then choose a maintain option the from the pop-up menu.
- 4. Results show in a pop-up window.

### Database

| Option     | Description                              |
|------------|--|
| Read Write | Set the database to Read and Write mode. |
| Read Only  | Set the database to Read Only mode.      |
| Online     | Bring the database online.               |

| Offline         | Take the database offline.                |
|-----------------|---|
| Emergency       | Set the database to the Emergency state.  |
| Multi User      | Set the database to Multi User mode.      |
| Single User     | Set the database to Single User mode.     |
| Restricted User | Set the database to Restricted User mode. |

### Assembly

| Option        | Description                      |
|---------------|----------------------------------|
| Set Invisible | Set the assembly to not visible. |
| Set Visible   | Set the assembly to visible.     |

#### Index

| Option           | Description                   |
|------------------|-------------------------------|
| Rebuild Index    | Rebuild and enable the index. |
| Reorganize Index | Reorganize the enabled index. |
| Disable Index    | Disable the index.            |

### Trigger / Database Trigger / Server Trigger

| Option          | Description          |
|-----------------|----------------------|
| Enable Trigger  | Enable the trigger.  |
| Disable Trigger | Disable the trigger. |

## **SQLite**

### **Databases**

To start working with the server objects, you should create and open a connection. The database file set in the General tab of the Connection window is named as the **main** database.

### Attach a database file

- 1. In the Navigation pane, control-click a connection and select Attach Database.
- 2. Enter the database properties in the pop-up window.

### Detach a database

1. In the Navigation pane, control-click an attached database and select Detach Database.

### Encrypt main database

- 1. In the Navigation pane, control-click the main database and select Encrypt Database.
- 2. Enter the password in the pop-up window.

#### Decrypt main database

- 1. In the Navigation pane, control-click the main database and select Decrypt Database.
- 2. Confirm decrypting in the dialog window.

#### View the sqlite\_master table

- 1. In the Navigation pane, control-click a database and select View Master Table.
- 2. The sqlite\_master table opens in Table Viewer.

### **Tables**

Tables are database objects that contain all data in a database. A table is a set of rows and columns, and their intersections are fields. In the main window, click **Table** to open the table object list.

You can create a table shortcut by dragging the table out. It provides a convenient way for you to open your table for entering data directly without activating the Navicat main window.

To empty a table, control-click the selected table and select Empty Table from the pop-up menu.

#### **Table Designer**

**Table Designer** is the basic Navicat tool for working with tables. It allows you to create, edit and drop table's fields, indexes, foreign keys, and much more.

In the Fields tab, you can search a field name by choosing Edit -> Find -> Find or pressing COMMAND-F.

Note: The tabs and options in the designer depend on the server version.

#### **Table Viewer**

When you open a table, **Table Viewer** displays data as a grid. Data can be displayed in two modes: Grid View and Form View. See Data Viewer for details.

### Views

A view allows users to access a set of tables as if it is a single table. You can use views to restrict access to rows. In the main window, click 🐱 View to open the view object list.

You can create a view shortcut by dragging the view out. It provides a convenient way for you to open your view without activating the Navicat main window.

#### **View Designer**

**View Designer** is the basic Navicat tool for working with views. You can edit the view definition as SQL statement (SELECT statement it implements) in the **SQL Editor** tab. To customize the view of the editor and find out more

features for SQL editing, see SQL Editor for details. If you want to load SQL statement from a SQL file to the editor, you can choose **File** -> **Import SQL**.

| Button | Description   |
|--------|---|
| 28     | Preview the data of the view.   |
|        | Show the Query Plan of the view.  |
|        | Stop the preview process.   |
| ≡-≘    | Build the view visually. It allows you to create and edit views without knowledge |
|        | of SQL. See SQL Builder for details.  |
| Ē      | Format the codes with the Beautify SQL settings in Editor.                        |

Hint: You can choose to show the preview results below the editor or in a new tab by choosing View -> Results -> Show Below Editor or Show in New Page.

### **View Viewer**

When you open a view, **View Viewer** displays data as a grid. Data can be displayed in two modes: Grid View and Form View. See Data Viewer for details.

### **Other Objects**

Navicat also allows you to manage other SQLite objects: Index and Trigger. In the main window, click **Chers** and select an object to open the object list.

### **Maintain Objects**

Navicat provides a complete solution for maintaining SQLite objects.

- 1. In the main window, select objects in the Navigation pane or the Objects tab.
- 2. Control-click the selected objects.
- 3. Choose **Maintain**, and then choose a maintain option the from the pop-up menu.
- 4. Results show in a pop-up window.

### Database

| Option           | Description  |
|------------------|--|
| Analyze Database | Collect statistics about the database.                         |
| Vacuum Database  | Rebuild the database file. It only works on the main database. |
| Reindex Database | Delete and recreate all indexes within the database.           |

### Table

| Option        | Description   |
|---------------|---|
| Analyze Table | Collect statistics about the contents of the table. |
| Reindex Table | Delete and recreate all indexes of the table.       |

| Get Rows Count Count the number of rows in the table. |  |
|---|--|
|---|--|

#### Index

| Option  | Description                    |
|---------|--------------------------------|
| Reindex | Delete and recreate the index. |

## MongoDB

### Databases

To start working with the server objects, you should create and open a connection. If the server is empty, you need to create a new database.

### Create a new database

- 1. In the Navigation pane, control-click your connection and select **New Database**.
- 2. Enter the database properties in the pop-up window.

### Collections

Collections are analogous to relational database tables for storing documents. In the main window, click **Collection** to open the collection object list.

You can create a collection shortcut by dragging the collection out. It provides a convenient way for you to open your collection for entering data directly without activating the Navicat main window.

To empty a collection, control-click the selected collection and select **Empty Collection** from the pop-up menu.

### **Collection Designer**

**Collection Designer** is the basic Navicat tool for working with collections. It allows you to set the collection properties, indexes, validation, storage engine, and much more.

Note: The tabs and options in the designer depend on the server version.

### **Collection Viewer**

When you open a collection, **Collection Viewer** displays data as a grid. Data can be displayed in three modes: Grid View, Tree View and JSON View. See Data Viewer for details.

### Views

A view is the result of the applying the specified aggregation pipeline to the source collection or view. In the main window, click 🐱 **View** to open the view object list.

You can create a view shortcut by dragging the view out. It provides a convenient way for you to open your view without activating the Navicat main window.

### **View Designer**

View Designer is the basic Navicat tool for working with views.

| Button | Description                      |  |
|--------|----------------------------------|--|
| 28     | Preview the data of the view.    |  |
|        | Show the Query Plan of the view. |  |

In the **Pipeline** tab, you can add, insert or delete aggregation pipeline stages. In the **Operator** column, select an expression operator. An expression template will be generated in the **Expression** column, you can modify the template.

### **View Viewer**

When you open a view, **View Viewer** displays data as a grid. Data can be displayed in three modes: Grid View, Tree View and JSON View. See Data Viewer for details.

### **Functions**

You can store JavaScript functions for reuse. In the main window, click  $f_{(x)}$  Function to open the function object list.

### **Function Designer**

**Function Designer** is the basic Navicat tool for working with functions. You can enter the function definition in the **Definition** tab. To customize the view of the editor and find out more features for script editing, see **Query Editor** for details.

### Results

To execute the function, click  $\blacktriangleright$  on the toolbar. If the script is correct, a dialog will pop up. Enter input parameters if necessary and click **OK**. If the function is supposed to return data, the **Result** tab opens with the data returned. If an error occurs while executing the function, execution stops, the appropriate error message is displayed.

### Indexes

Navicat allows you to manage MongoDB indexes. In the main window, click <sup>A-Z</sup> Index to open the index object list.

### **MapReduce**

Map-Reduce is a data processing paradigm for condensing large volumes of data into useful aggregated results. In the main window, click **Paper MapReduce** to open the map-reduce object list.

You can set automation tasks to schedule Map-Reduce jobs.

#### **Map-Reduce Designer**

Map-Reduce Designer is the basic Navicat tool for working with Map-Reduce jobs.

| Button | Description  |  |
|--------|--|--|
|        | Run the Map-Reduce job.  |  |
|        | Stop the running Map-Reduce job.                                       |  |
| 28     | Preview the documents by applying Input, Mapper, Reducer or Finalizer. |  |
| fx.    | Import an existing function to Mapper, Reducer or Finalizer.           |  |

### **Results**

To run the Map-Reduce job, click  $\blacktriangleright$  on the toolbar. If you set to output the results inline, the **Result** tab opens with the documents returned, the number of documents and the timing information. If you set to write the results to a collection, the results return a document to the specified output collection.

### **GridFS**

**GridFS** is a specification for storing and retrieving files. In the main window, click GridFS to open the GridFS object list.

You can create multiple buckets in a database for storing files. Click 🚇 and enter the name of the bucket.

To open the selected bucket, click 🚢.

### **Bucket Viewer**

**Bucket Viewer** is the basic Navicat tool for working with GridFS buckets. You can upload, download and view GridFS files that are inside the bucket.

| Button  | Description  |  |
|---------|--|--|
|         | Open the selected GridFS file.   |  |
| 6       | Delete the selected GridFS files.                                      |  |
| - Ca    | Upload files into the bucket.  |  |
| <b></b> | Download the selected GridFS files.                                    |  |
| Y       | Filter the GridFS file table by creating and applying filter criteria. |  |
| 0       | Preview an image file that is less than 1 MB.                          |  |
|         | Check the status of file uploads and downloads.                        |  |

#### **File Table**

The File table displays all the files that are uploaded to the bucket.

You can edit the GridFS file's name, content type, alias or metadata. In the table, control-click the name of the file and select **Modify File Name**, **Modify Content Type**, **Modify Alias** or **Modify Metadata**. Then, enter the information in the pop-up window.

#### **Filter Pane**

If you have many files uploaded to the bucket, you can find matching files using a filter. To toggle the Filter pane, click **Y** 

### **Progress Pane**

The Progress pane displays the status of all file uploads and downloads in the current window. Parallel downloads and uploads are supported. If the window is closed, the list will be cleared.

When a file is starting to upload or download, click the corresponding buttons next to the progress bar to pause, resume and stop the process. After the process is finished, you can click  $\bigcirc$  to open the folder that contains the file, or hover over an item and click  $\times$  to remove it from the list.

If you want to pause, resume and stop all items that are in progress, control-click the list and select the appropriate options.

To clear the finished items, control-click the list and select Clear All Finished.

### **Maintain Objects**

Navicat provides a complete solution for maintaining MongoDB objects.

- 1. In the main window, select objects in the Navigation pane or the Objects tab.
- 2. Control-click the selected objects.
- 3. Choose Maintain, and then choose a maintain option the from the pop-up menu.
- 4. Results show in a pop-up window.

### Database

| Option          | Description   |  |
|-----------------|---|--|
| Repair Database | Rebuild the database and indexes by discarding invalid or corrupt data. |  |

### Collection

| Option              | Description   |  |
|---------------------|---|--|
| Compact Collection  | Rewrite and defragment all data and indexes in the collection.      |  |
| Validate Collection | Check the structures within a namespace for correctness by scanning |  |
|                     | the collection's data and indexes.                                  |  |
| Reindex Collection  | Drop and recreate all indexes on the collection.                    |  |

# Chapter 6 - Data Viewer

## About Data Viewer

Navicat includes a data viewer that allows you to view, update, or delete data. The viewer also includes advanced features and editors that can help you understand the data as you manipulate it. You can use common keyboard navigation to browse your data.

## **RDBMS**

### **RDBMS** Data Viewer

RDBMS Data Viewer displays the data as a grid or a form. To switch the view, click III or III at the bottom.

**Note:** Form View is available only in Non-Essentials Edition.

| Button | Description   |
|--------|---|
| 5      | Start a transaction. If Auto begin transaction is enabled in Preferences, transaction |
|        | will be started automatically when opening the data viewer.                           |
| Đ      | Make permanent all changes performed in the current transaction.                      |
| 0      | Undo work done in the current transaction.  |
|        | Activate the assistant editors for viewing and editing data.                          |
| Y      | Filter records by creating and applying filter criteria for the data grid.            |
| t≣     | Sort records by custom order.   |
| R      | Import data from files.   |
| ₽      | Export data to files.   |

The toolbar of the data viewer provides the following functions for managing data:

### **Use Navigation Bar**

Data Viewer provides a convenient way to navigate among the records/pages using the Navigation Bar buttons.

|        | $+ - \sim$  | C SELECT * FROM `sakila`.`payment` LIMIT 0, K+ ← 1 $\rightarrow \rightarrow \Rightarrow \oplus \blacksquare$ 🗐 |  |
|--------|---|--|--|
|        |   | Record 11 of 1000 in page 1  |  |
| Buttor | Button Description                                  |  |  |
| +      |   | Add Record - enter a new record. At any point when you are working in the data                                 |  |
|        |   | viewer, click on this button to get a blank display for a record.  |  |
| -      |   | Delete Records - delete an existing record.  |  |
| ~      |   | Apply Changes - apply the changes.   |  |
| ×      |   | Discard Changes - remove all edits made to the current record.   |  |
| C      |   | Refresh - refresh the data.  |  |
|        | Stop - stop when loading enormous data from server. |  |  |
| H      |   | First Page - move to the first page.   |  |

| +  | Previous Page - move to the previous page.  |  |
|----|---|--|
| +  | Next Page - move to the next page.  |  |
| ¥  | Last Page - move to the last page.  |  |
| Ŧ  | First Record - move to the first record.  |  |
| Ť  | Previous Record - move one record back (if there is one) from the current record. |  |
| +  | Next Record - move one record ahead.  |  |
| Ŧ  | Last Record - move to the last record.  |  |
| ¢  | Setting - set number of records showing on each page.                             |  |
| ▦  | Grid View - switch to Grid View.  |  |
| ŪŪ | Form View - switch to Form View.  |  |

Use the **Setting** <sup>4</sup> button to enter to the edit mode.

### Limit records per page

Check this option if you want to limit the number of records showed on each page. Otherwise, all records will be displayed in one single page. And, set the value in the edit box. The number representing the number of records showed per page.

Note: This setting mode will take effect on current object only. To adjust the global settings, see Preferences.

### Record a of b in page c

Display the numbers representing the selected record and page.

- a the selected record.
- b number of records in the current page.
- c the current page.

### **Edit Records**

#### **Grid View**

Grid View is a spreadsheet-like view showing records and fields as rows and columns. The navigation bar allows you to switch the records quickly, insert or delete records.

### To add a record

Make sure that your cursor is situated in the first blank cell on the table, then enter the desired data. If you are adding the new record into an existing table, just simply click on an existing record and click + from the navigation bar or press COMMAND-+ to get a blank display for a record.

- 2. Watch the graphics symbol in the record selectors box just to the left of your record. It will change from **•**, which indicates that it is the current record, to **I**, which indicates that you are editing this record.
- 3. Just simply move to another record to save the record or click  $\checkmark$  from the navigation bar.

### To edit a record

- 1. Select the record that you wish to edit by clicking in the specific field you want to change.
- 2. Type in the new data for that field.
- 3. Just simply move to another record, the new data will overwrite the previous data or click ✓ from the navigation bar.

Note: Close the table is another way to save the records.

### To edit multiple cells with same data

- 1. Select a block of cells in the data grid.
- 2. Type in the new data.

Note: Changes will apply to multiple fields with compatible data type.

### To delete a record

- 1. Select the record that you wish to delete.
- 2. Just simply control-click and select **Delete Record** or click **f**rom the navigation bar.

### **Form View**

Form View displays a single record at a time from a table. The navigation bar allows you to switch the records quickly, insert or delete records.

### To add a record

- 1. Click + from the navigation bar or press COMMAND-+ to get a blank display for a record.
- 2. Enter the desired data.
- 3. Click  $\checkmark$  from the navigation bar to save the record.

### To edit a record

- 1. Go to the record that you wish to edit.
- 2. Type in the new data for the specific field you want to change.
- 3. Click 💙 from the navigation bar. The new data will overwrite the previous data.

Note: Close the table is another way to save the records.

### To delete a record

- 1. Go to the record that you wish to delete.
- 2. Just simply control-click and select **Delete Record** or click **f**rom the navigation bar.

### **Edit Records with Special Handling**

To set the cell value to an empty string or NULL, click on a cell to enter edit mode, and then control-click the cell and select **Set to Empty String** or **Set to NULL**.

To view images in the grid, just simply choose View -> Display -> Show Image in Grid.

Note: Available only for MySQL, Oracle, PostgreSQL, SQL Server and MariaDB.

Hint: To view/edit images in an ease way, see Image Editor.

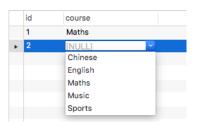

To edit a Date/Time record, just simply click .... to open the editor for editing. Choose/enter the desired data. The editor used in cell is determined by the field type assigned to the column.

Note: Available only for MySQL, Oracle, PostgreSQL, SQL Server and MariaDB.

| Date   | Time                       | DateTime/Timestamp  |
|--|----------------------------|---|
| May 2017       4 ● ▶         Su Mo Tu We Th Fr Sa         30 1 2 3 4 5 6         7 8 9 10 11 12 13         14 15 16 17 18 19 20         21 22 23 24 25 26 27         28 29 30 31 1 2 3         4 5 6 7 8 9 10         22/ 5/ 2017         Cancel | 12:54:09 PM C<br>Cancel OK | $\begin{array}{c cccc} May 2017 & \bullet \bullet \\ \hline Su Mo Tu We Th Fr Sa \\ \hline 30 & 1 & 2 & 3 & 4 & 5 & 6 \\ \hline 7 & 8 & 9 & 10 & 11 & 12 & 13 \\ 14 & 15 & 16 & 17 & 18 & 19 & 20 \\ \hline 21 & 22 & 23 & 24 & 25 & 26 & 27 \\ \hline 28 & 29 & 30 & 31 & 1 & 2 & 3 \\ \hline 4 & 5 & 6 & 7 & 8 & 9 & 10 \\ \hline \hline 22/ & 5/ & 2017, & 4:42:30 \text{ PM} \end{array}$ |

To edit an Enum record, just simply choose the record from the drop-down menu.

Note: Available only for MySQL, PostgreSQL and MariaDB.

To edit a Set record, just simply click ... to open the editor for editing. Select the records from the list. To remove the records, uncheck them in the same way.Check **Null** or **Empty String** to set the value as Null or Empty String.

Note: Available only for MySQL and MariaDB.

To view BFile content, just simply choose View -> Display -> Preview BFile.

Note: Available only for Oracle.

To generate UUID/GUID, control-click the selected cell and select Generate UUID.

Note: Available only for PostgreSQL and SQL Server.

### Edit Records with Foreign Key (Foreign Key Data Selection - Available only in Non-Essentials Edition)

**Foreign Key Data Selection** is a useful tool for letting you to get the available value from the reference table in an easy way. It allows you to show additional records from the reference table and search for particular records.

To include data to the record, just simply click .... to open the editor for editing.

| 3 |        | :        | 2       | 142    |          | . 0.99    |       | 2005-06-15      | 201         |

### **Copy Data from Grid View**

Data that being copied from Navicat goes into the clipboard with the fields delimited by tabs and the records delimited by carriage returns. It allows you to easily paste the clipboard contents into any application you want. Spreadsheet applications in general will notice the tab character between the fields and will neatly separate the clipboard data into rows and columns.

To select data using keyboard shortcuts

| COMMAND-A        | Toggle the selection of all rows and columns in the data grid.  |
|------------------|---|
| SHIFT-UP ARROW   | Toggle the selection of rows as you move up in the data grid.   |
| SHIFT-DOWN ARROW | Toggle the selection of rows in the data grid as you move down. |

To select data using mouse actions

- Select the desired records by holding down the COMMAND key while clicking on each row.
- Select range of records by clicking the first row you want to select and holding down the SHIFT key together with moving your cursor to the last row you wish to select.
- Select a block of cells.

Note: After you have selected the desired records, just simply press COMMAND-C or choose Edit -> Copy.

#### **Paste Data into Grid View**

Data are copied into the clipboard will be arranged as below format:

- Data are arranged into rows and column.
- Rows and columns are delimited by carriage returns/tab respectively.
- Columns in the clipboard have the same sequence as the columns in the data grid you have selected.

When pasting data into Navicat, you can replace the contents of current records and append the clipboard data into the table. To replace the contents of current records in a table, you must select the rows in the data grid whose contents must be replaced by the data in the clipboard. Just simply press COMMAND-V or choose **Edit** -> **Paste**. Navicat will paste all the content in the clipboard into the selected rows. The paste action cannot be undone if you do not enable transaction.

#### **Copy Records as Insert/Update Statements**

To copy records as Insert/Update statement, control-click the selected records and select **Copy As** -> **Insert Statement** or **Update Statement**. Then, you can paste the statements in any editors.

#### **Copy Field Name**

To copy field names as tab separated values, control-click the selected columns/records and select **Copy As** -> **Tab Separated Values (Field Name only)**. If you want to copy data only or both field names and data, you can choose **Tab Separated Values (Data only)** or **Tab Separated Values (Field Name and Data)** respectively.

### Sort / Find / Replace Records

### **Sort Records**

Server stores records in the order they were added to the table. Sorting in Navicat is used to temporarily rearrange records, so that you can view or update them in a different sequence.

Move over the column caption whose contents you want to sort by, click the right side of the column and select **Sort** Asc, Sort Desc or Remove Sort.

| Find      | ) (a     | ~name                      |           | 2 matches < > Done                  |
| +         | × c      | Find Data<br>/ Find Column | kila`     |                                     |

There are some additional options for Find and Replace, click Q:

| Option                  | Description   |
|-------------------------|---|
| Highlight Matched Cells | Highlight all matches in the viewer.                                |
| Incremental Search      | Find matched text for the search string as each character is typed. |
| Match Case              | Enable case sensitive search.                                       |

# **Filter Records**

Use either of the following methods to filter the data in the grid:

- Click on a cell to enter edit mode. Control-click the cell and select **Filter** -> **Field xxx Value** from the pop-up menu to filter records by the current value in the cell.
- You can also customize your filter in a more complicated way by clicking Y from the toolbar. The Filter Wizard becomes visible at the top of the grid, where you can see the active filtering condition and easily enable or disable it by clicking a check box at the left.

# Manipulate Raw Data

Navicat normally recognize what user has input in a table as normal string, any special characters or functions would be processed as plain text (that is, its functionality would be skipped).

Editing data in **Raw Mode** provides an ease and direct method to apply server built-in functions. To access Raw Mode, just simply choose **View** -> **Display** -> **Raw Mode**.

Note: Available only for MySQL, PostgreSQL, SQLite, SQL Server and MariaDB.

|   | CustNo | Company                      | Addr1                  |
|---|--------|------------------------------|------------------------|
| Ι | 1351   | CONCAT('Sight Diver00', 'X') | '1 Neptune Lane'       |
|   | 1380   | 'Blue Jack Aqua Center'      | '23-738 Paddington     |
|   | 1384   | 'VIP Divers Club'            | '32 Main St.'          |
|   | 1510   | 'Ocean Paradise'             | 'PO Box 8745'          |
|   | 1513   | 'Fantastique Aquatica'       | 'Z32 999 #12A-77 A.A.' |

# Format Data View

Use the following methods to format the table:

Hint: Form View only supports Show/Hide Columns.

### **Move Columns**

- 1. Click on the column header and hold down the left mouse button.
- 2. Move the pointer to the desired location.
- 3. Release the mouse and the column will move.

| payment_id | staff | _id eus <b>tor</b> | ner_id rental_id |
|------------|-------|--------------------|------------------|
| 1          | 1     | 1                  | 76               |
| 2          | 1     | 3                  | 573              |
| 3          | 1     | 3                  | 1185             |
| 4          | 2     | 3                  | 1422             |
| 5          | 2     | 1                  | 1476             |
| 6          | 1     | 1                  | 1725             |

### Set Column Width

- Click right border at top of column and drag either left or right.
- Double-click right border at top of column to obtain the best fit for the column.
- Control-click the column you want to set the column width with and select **Set Column Width** or select from the **View** menu. Specify width in the **Set All Columns Width** dialog.

Hint: The result applies on all columns.

### **Set Row Height**

Control-click anywhere on the table grid and select **Set Row Height** or select from the **View** menu. Specify row height in the **Set Row Height** dialog.

Hint: This action applies on the current table grid only.

### Show/Hide Columns

If there are many columns in the table and you want to hide some of them from the grid/form, just simply control-click anywhere on the grid/form and select **Show/Hide Columns** or select from the **View** menu. Select the columns that you would like to hide.

The hidden columns will disappear from the grid/form.

To unhide the columns, just simply control-click anywhere on the grid/form and select **Show/Hide Columns** or select from the **View** menu. Select the columns that you would like to redisplay.

| payment_id                                    |   | payment_id | customer_id | rental_id | payment_date |
|---|---|------------|-------------|-----------|--------------|
| customer_id                                   |   | 2          | 3           | 573       | 2005-05-28   |
| staff_id                                      |   | 3          | 3           | 1185      | 2005-06-15   |
| <ul> <li>rental_id</li> <li>amount</li> </ul> |   | 4          | 3           | 1422      | 2005-06-15   |
| payment_date                                  | • | 5          | 1           | 1476      | 2005-06-15   |
| <ul> <li>last_update</li> </ul>               |   | 6          | 1           | 1725      | 2005-06-16   |
|   |   | 7          | 1           | 2308      | 2005-06-18   |

### Show/Hide ROWID

If you want to display or hide the rowid (address) of every row, control-click anywhere on the table grid and select **Show/Hide ROWID** or select from the **View** menu.

The ROWID column will be showed in the last column.

Note: Available only for Oracle and SQLite.

# MongoDB

# MongoDB Data Viewer

MongoDB Data Viewer displays the data as a grid or a tree, or in JSON format. To switch the view, click  $\blacksquare$ ,  $\boxdot$  or  $\square$  at the bottom.

The toolbar of the data viewer provides the following functions for managing data:

| Button     | Description   |
|------------|---|
|            | Start a transaction. If Auto begin transaction is enabled in Preferences, transaction   |
|            | will be started automatically when opening the data viewer.                             |
|            | Make permanent all changes performed in the current transaction.                        |
|            | Undo work done in the current transaction.  |
|            | Activate the assistant editors for viewing and editing data.                            |
|            | Available only for Grid View and Tree View.   |
| Y          | Filter records by creating and applying filter criteria for the data grid.              |
| ₽          | Sort records by custom order.   |
| <  >       | [Tree View] Expand all embedded documents and arrays.                                   |
| > <        | [Grid View] Collapse all embedded documents.  |
|            | [Tree View] Collapse all embedded documents and arrays.                                 |
| 4          | [Grid View] Use the specified type color set on the Type Color pane to highlight cells. |
|            | Import data from files.   |
| E <b>!</b> | Export data to files.   |
| <b>1</b>   | Analyze the collection.   |

# **Use Navigation Bar**

Data Viewer provides a convenient way to navigate among the documents/pages using the Navigation Bar buttons.

| + - 🗸 × c          | db.getCollection("departments").find().li $\mathbf{k} \leftarrow 1 \rightarrow \mathbf{k} \leftarrow \mathbf{H}$ |  |  |  |  |  |  |
|--------------------|--|--|--|--|--|--|--|
|                    | Document 13 of 27 in page 1  |  |  |  |  |  |  |
| Button Description |  |  |  |  |  |  |  |
| +                  | Add Document - enter a new document. At any point when you are working in  |  |  |  |  |  |  |
| -                  | the data viewer, click on this button to get a blank display for a document.                                     |  |  |  |  |  |  |
| _                  | Delete Documents - delete an existing document.  |  |  |  |  |  |  |
| ~                  | Apply Changes - apply the changes.   |  |  |  |  |  |  |
| ×                  | <b>Discard Changes</b> - remove all edits made to the current document.  |  |  |  |  |  |  |
| C                  | Refresh - refresh the data.  |  |  |  |  |  |  |
|                    | Stop - stop when loading enormous data from server.  |  |  |  |  |  |  |
| *                  | First Page - move to the first page.   |  |  |  |  |  |  |
| +                  | Previous Page - move to the previous page.   |  |  |  |  |  |  |
| <b>→</b>           | Next Page - move to the next page.   |  |  |  |  |  |  |
| -11                | Last Page - move to the last page.   |  |  |  |  |  |  |
| Ŧ                  | First Document - move to the first document.   |  |  |  |  |  |  |
| <b>†</b>           | Previous Document - move one document back (if there is one) from the current                                    |  |  |  |  |  |  |
|                    | document.  |  |  |  |  |  |  |
| +                  | Next Document - move one document ahead.   |  |  |  |  |  |  |
| Ŧ                  | Last Document - move to the last document.   |  |  |  |  |  |  |
| ٥                  | Setting - set number of documents showing on each page.  |  |  |  |  |  |  |
| Ħ                  | Grid View - switch to Grid View.   |  |  |  |  |  |  |
| ¥.                 | Tree View - switch to Tree View.   |  |  |  |  |  |  |
| {}                 | JSON View - switch to JSON View.   |  |  |  |  |  |  |

Use the **Setting** <sup>(\*)</sup> button to enter to the edit mode.

### Limit *documents* per page

Check this option if you want to limit the number of documents showed on each page. Otherwise, all documents will be displayed in one single page. And, set the value in the edit box. The number representing the number of documents showed per page.

Note: This setting mode will take effect on current object only. To adjust the global settings, see Preferences.

### Document $a \mbox{ of } b \mbox{ in page } c$

Display the numbers representing the selected document and page.

a - the selected document.

b - number of documents in the current page.

c - the current page.

# Grid View

Grid View is a spreadsheet-like view showing documents and fields as rows and columns. The navigation bar allows you to switch the documents quickly, insert or delete documents.

### To add a document using the grid

- 1. Click on an existing document and click + from the navigation bar or press COMMAND-+ to get a blank display for a document.
- 2. Enter the desired data.
- 3. Watch the graphics symbol in the document selectors box just to the left of your document. It will change from
  , which indicates that it is the current document, to I, which indicates that you are editing this document.
- 4. Just simply move to another document to save the document or click 💙 from the navigation bar.

Note: If your collection is empty, a window will pop up for you to add documents.

### To add a document using the pop-up window

- 1. Control-click the grid and select Add Document.
- 2. Write the document in the pop-up window.
- 3. Click Validate to ensure the document is correct.
- 4. Click Save.

### To edit a document using the grid

- 1. Select the document that you wish to edit by clicking in the specific cell you want to change.
- 2. Type in the new data for that cell.
- 3. Just simply move to another document or click 💙 from the navigation bar, the new data will overwrite the previous data.

### To edit a document using the pop-up window

- 1. Control-click the document that you wish to edit and select Edit Document.
- 2. Edit the document in the pop-up window.

- 3. Click Validate to ensure the document is correct.
- 4. Click Save.

Note: Close the collection is another way to save the documents.

### To edit multiple cells with same data

- 1. Select a block of cells in the data grid.
- 2. Type in the new data.

Note: Changes will apply to multiple fields with compatible data type.

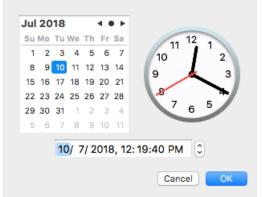

### To delete a document

- 1. Select the document that you wish to delete.
- 2. Just simply control-click and select **Delete Document** or click **f** from the navigation bar.

### **Edit Documents with Special Handling**

To set the cell value to an empty string or NULL, click on a cell to enter edit mode, and then control-click the cell and select **Set to Empty String** or **Set to NULL**.

To edit a DateTime data, just simply click ... to open the editor for editing. Choose/enter the desired data.

To change the type of a cell value, click on a cell to enter edit mode, and then control-click the cell and select **Value Type**. Then, select the desired type.

### **Copy Data from Navicat**

Data that being copied from Navicat goes into the clipboard with the fields delimited by tabs and the documents delimited by carriage returns. It allows you to easily paste the clipboard contents into any application you want. Spreadsheet applications in general will notice the tab character between the fields and will neatly separate the clipboard data into rows and columns.

To select data using keyboard shortcuts

| COMMAND-A        | Toggle the selection of all rows and columns in the data grid.  |
|------------------|---|
| SHIFT-UP ARROW   | Toggle the selection of rows as you move up in the data grid.   |
| SHIFT-DOWN ARROW | Toggle the selection of rows in the data grid as you move down. |

To select data using mouse actions

- Select the desired documents by holding down the COMMAND key while clicking on each row.
- Select range of documents by clicking the first row you want to select and holding down the SHIFT key together with moving your cursor to the last row you wish to select.
- Select a block of cells.

Note: After you have selected the desired documents, just simply press COMMAND-C or choose Edit -> Copy.

### Paste Data into Navicat

Data are copied into the clipboard will be arranged as below format:

- Data are arranged into rows and column.
- Rows and columns are delimited by carriage returns/tab respectively.
- Columns in the clipboard have the same sequence as the columns in the data grid you have selected.

When pasting data into Navicat, you can replace the contents of current documents and append the clipboard data into the collection. To replace the contents of current documents in a collection, you must select the rows in the data grid whose contents must be replaced by the data in the clipboard. Just simply press COMMAND-V or choose **Edit** -> **Paste**. Navicat will paste all the content in the clipboard into the selected rows. The paste action cannot be undone if you do not enable transaction.

### **Copy Field Name**

To copy field names as tab separated values, control-click the selected fields/documents and select **Copy As** -> **Tab Separated Values (Field Name only)**. If you want to copy data only or both field names and data, you can choose **Tab Separated Values (Data only)** or **Tab Separated Values (Field Name and Data)** respectively.

### **Filter Documents**

Use either of the following methods to filter the data in the grid:

- Click on a cell to enter edit mode. Control-click the cell and select Filter -> Field xxx Value from the pop-up menu to filter documents by the current value of the selected field.
- You can also customize your filter in a more complicated way by clicking Y from the toolbar. The Filter Wizard becomes visible at the top of the grid, where you can see the active filtering condition and easily enable or disable it by clicking a check box at the left.

### **Format Grid View**

Use the following methods to format the collection grid:

### **Highlight Cells based on Types**

Grid View allows highlighting cells based on data types to make particular cells easy to identify. The Type Color pane is on the right side of the grid. If the grid window is docked to the Navicat main window, you can click the  $\mathfrak{S}$  icon in the Information pane to set the color.

To apply the color, click the 🗳 button on the toolbar or check the **Enable Coloring** option on the Type Color pane.

#### Expand/Collapse Embedded Documents

Grid View allows embedded documents to be expanded alongside other columns for easier data analysis. To expand or collapse an embedded document, just simply click on the cell with embedded document and click or , or control-click the cell and select **Expand**, **Collapse** or **Collapse All Embedded Documents**.

|   | 60  | IT                  | 103             |
|---|-----|---------------------|-----------------|
|   | 70  | Public Relations    | 204             |
|   | 80  | Sales               | 145             |
| • | 90  | (Document) 2 Fields | <b>&gt;</b> 100 |
|   | 100 | Finance             | 108             |
|   | 110 | Accounting          | 205             |
|   | 120 | Treasury            | (NULL)          |

### **Expand Arrays**

Grid View allows showing all elements in an array. To expand array elements, just simply click on the cell with array elements and click

|   | (NULL)             | 1700          |  |
|---|--------------------|---------------|--|
|   | (NULL)             | 1700          |  |
|   | (NULL)             | 1700          |  |
| ۲ | (Array) 3 Elements | <li>1700</li> |  |
|   | (NULL)             | 1700          |  |
|   | (NULL)             | 1700          |  |
|   | (NULL)             | 1700          |  |

All array elements display on a new grid. You can view, add or delete the elements here. Click the collection name to jump back to the collection grid.

| departments | > | MANAGER_ID |
|-------------|---|------------|
| MANAGER_ID  |   |            |
| 101         |   |            |
| 103         |   |            |
| 105         |   |            |
|             |   |            |

### Move Columns

- Click on the column header and hold down the left mouse button.
- Move the pointer to the desired location.
- Release the mouse and the column will move.

| DEPARTMENT_NAME     | DEPARTMENT_ID 🗸 | MANAGER_ID | LOCATION_ID |
|---------------------|-----------------|------------|-------------|
| Administration      | 10              | 200        | 1700        |
| Marketing           | 20              | 201        | 1800        |
| Purchasing          | 30              | 114        | 1700        |
| Human Resources     | 40              | 203        | 2400        |
| Shipping            | 50              | 121        | 1500        |
| IT                  | 60              | 103        | 1400        |
| Public Relations    | 70              | 204        | 2700        |
| Sales               | 80              | 145        | 2500        |
| (Document) 2 Fields | 90              | 100        | 1700        |

### Set Column Width

- Click right border at top of column and drag either left or right.
- Double-click right border at top of column to obtain the best fit for the column.
- Control-click the grid and select Set Column Width or select from the View menu. Specify width in the Set All Column Width dialog.

Hint: The result applies on all columns.

### **Set Row Height**

Control-click anywhere on the collection grid and select **Set Row Height** or select from the **View** menu. Specify row height in the **Set Row Height** dialog.

**Hint:** This action applies on the current collection grid only.

### Show/Hide Columns

If there are many columns in the collection and you want to hide some of them from the collection grid, just simply control-click anywhere on the collection grid and select **Show/Hide Columns** or select from the **View** menu. Select the columns that you would like to hide.

The hidden columns will disappear from the collection grid.

To unhide the columns, just simply control-click anywhere on the collection grid and select **Show/Hide Columns** or select from the **View** menu. Select the columns that you would like to redisplay.

| id            |   | DEPARTMENT_ID | MANAGER_ID | LOCATION_ID |
|---------------|---|---------------|------------|-------------|

| DEPARTMENT_N  | • | 20            | 201        | 1800        |
| MANAGER_ID    |   | 30            | 114        | 1700        |
| LOCATION_ID   |   | 40            | 203        | 2400        |
|               |   | 50            | 121        | 1500        |
|               |   | 60            | 103        | 1400        |
|               |   | 70            | 204        | 2700        |
|               |   | 80            | 145        | 2500        |

# **Tree View**

Tree View displays documents in a hierarchical view. The navigation bar allows you to switch the documents quickly, insert or delete documents.

### To add a document

- 1. Click + from the navigation bar or press COMMAND-+ to get a blank display for a document.
- 2. Enter the desired data.
- 3. Click 💙 from the navigation bar to save the document .

**Note:** If your collection is empty, you need to click I to add a new field.

### To edit a document

- 1. Go to the document that you wish to edit.
- 2. Click on a field name, a value or a type to modify.
- 3. Click  $\checkmark$  from the navigation bar to apply the changes.

### To add a field or an item

- 1. Go to the document that you wish to edit.
- 2. Click 📕 to add a new field/item.
- 3. Enter the desired data.

### To delete a field or an item

- 1. Go to the document that you wish to edit.
- 2. Control-click the field/item you want to delete and select **Delete Value**.

Note: Close the collection is another way to save the documents.

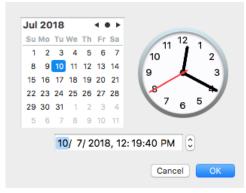

### To delete a document

- 1. Go to the document that you wish to delete.
- 2. Just simply click **f**rom the navigation bar.

### **Edit Documents with Special Handling**

To set the value to NULL, control-click the selected item and select Value Type -> NULL.

To edit a DateTime data, just simply click ... to open the editor for editing. Choose/enter the desired data.

### **Format Tree View**

### Expand/Collapse Embedded Documents & Arrays

All embedded Documents and arrays are represented as nodes. The nodes can be expanded or collapsed by clicking the node icon.

# **JSON** View

JSON View displays documents in JSON format. The navigation bar allows you to switch the documents quickly, insert or delete documents.

### To add a document

- 1. Click + from the navigation bar or press COMMAND-+.
- 2. Write the document in the pop-up window.
- 3. Click Validate to ensure the document is correct.
- 4. Click Save.

### To edit a document

- 1. Control-click the document that you wish to edit and select Edit Document.
- 2. Edit the document in the pop-up window.
- 3. Click Validate to ensure the document is correct.
- 4. Click Save.

### To delete a document

- 1. Click on the document that you wish to delete.
- 2. Just simply click from the navigation bar.

# Sort / Find / Replace Documents

### **Sort Documents**

Server stores documents in the order they were added to the collection. Sorting in Navicat is used to temporarily rearrange documents, so that you can view or update them in a different sequence.

Move over the field caption whose contents you want to sort by, click the right side of the field and select **Sort Asc**, **Sort Desc** or **Remove Sort**.

| _id                      | EMPLOYEE_ID | <ul> <li>FIRST_NAME</li> </ul>                           | LAST_NAME |

### **Find and Replace**

### **Find Documents**

The Find bar is provided for quick searching for the text in the viewer. Just simply choose **Edit-> Find -> Find** or press COMMAND-F. Then, enter a search string. The search starts at the cursor's current position to the end of the file.

For Grid View or Tree View, you need to click  $\curvearrowright$  and choose **Find Data**.

To find for the next text, just simply click > or press COMMAND-G.

### **Replace Documents**

In the Find bar, choose **Replace** or press OPTION-COMMAND-F and enter the text you want to search and replace. Click **Replace** or **Replace All** to replace the first occurrence or all occurrences automatically. If you clicked **Replace All**, you can click ✓ to apply the changes or × to cancel the changes.

### **Find Fields**

In Grid View or Tree View, you can search for fields in the collection. Just simply choose **Edit** -> **Find** -> **Find** or press COMMAND-F. Click <sup>Q</sup>\* and choose **Find Column**. Then, enter a search string.

There are some additional options for Find and Replace, click Q.

| Option                  | Description   |
|-------------------------|---|
| Highlight Matched Cells | Highlight all matches in the viewer.                                |
| Incremental Search      | Find matched text for the search string as each character is typed. |
| Match Case              | Enable case sensitive search.                                       |
| Regular Expression      | Search regular expressions.   |
| Whole Word              | Return the objects that match the entire word of the search string. |

# **Assistant Editors**

Navicat provides powerful assistant editors to view and edit TEXT, BLOB and BFile fields content. The editor allows you to view, update, insert, or delete data in a table or a collection. Click Text, III Hex, IIII Hex, IIII Hex, Web from the toolbar to activate the appropriate viewer/editor.

Note: Oracle BFile fields cannot be edited. MongoDB JSON View does not support assistant editors.

The **Text** pane allows you to edit data as a simple text. To change the syntax highlight, simply control-click the empty space and select **Language**. Use the ✓ button on the navigation bar to update the changed records or documents.

The **Hex** pane allows you to edit data in hexadecimal mode. Use the ✓ button on the navigation bar to update the changed records or documents.

The **Image** pane allows you to show data as image. Use the **Load**, **Save to disk** and **Clear** buttons to load/remove the image from a file, and save the image to a file.

The Web pane allows you to show data with HTML codes as in a web browser.

# **Filter Wizard**

Filter Wizard allows you to facilitate creating and applying filter criteria that you specify for the data grid. Moreover, it allows you to save filter criteria as a profile for future use. Click **Y** from the toolbar to activate the filter.

### **Create Filter**

1. To add a new condition to the criteria, just simply click +. If you need to add conditions in parentheses, click

Hint: To add parentheses to existing conditions, simply control-click on the selected conditions and select Group with Bracket. To remove the parentheses, control-click a bracket and select Delete Bracket or Delete Bracket and Conditions.

2. Click on the field name (next to the checkbox) and choose a field from the list.

3. Click on the operator (next to the field name) and choose a filter operator. You can choose **[Custom]** from the list to enter the condition manually.

| Filter Operator        | Operator Description                                   |
|------------------------|--|
| =                      | The field is equal to 'value'.                         |
| !=                     | The field is not equal to 'value'.                     |
| <                      | The field is less than 'value'.                        |
| <=                     | The field is less than or equal to 'value'.            |
| >                      | The field is greater than 'value'.                     |
| >=                     | The field is greater than or equal to 'value'.         |
| contains               | The field contains 'value'.                            |
| contains (case         | The field contains 'value' (case insensitive).         |
| insensitive)           | Available only for PostgreSQL.                         |
| does not contain       | The field does not contain 'value'.                    |
| does not contain (case | The field does not contain 'value' (case insensitive). |
| insensitive)           | Available only for PostgreSQL.                         |
| begin with             | The field starts with 'value'.                         |
| does not begin with    | The field does not start with 'value'.                 |
| end with               | The field ends with 'value'.                           |
| does not end with      | The field does not end with 'value'.                   |
| is null                | The field is NULL.                                     |
| is not null            | The field is NOT NULL.                                 |
| is empty               | The field is empty.                                    |
| is not empty           | The field is not empty.                                |
| is between             | The field is between 'value1' and 'value2'.            |
| is not between         | The field is not between 'value1' and 'value2'.        |
| is in list             | The field is in the list of ('value1','value2',).      |
| is not in list         | The field is not in the list of ('value1','value2',).  |
| exists                 | The field exists.                                      |
|                        | Available only for MongoDB.                            |
| does not exist         | The field does not exist.                              |
|                        | Available only for MongoDB.                            |
| is field type          | The field type is 'value'.                             |
|                        | Available only for MongoDB.                            |
| is not field type      | The field type is not 'value'.                         |
|                        | Available only for MongoDB.                            |

4. Click on **?** to activate the appropriate editor and enter the criteria values. The editor used in the criteria values box is determined by the data type assigned to the corresponding field.

**Hint:** For MongoDB, you can change the editor type in the criteria values box.

5. Click on the logical operator (next to the criteria values) to choose **and** or **or**.

- 6. Repeat step 1-5 to add another new condition.
- 7. Click ✓ to see the result of the filtering you made.

**Hint:** If you want to reverse the conditions, control-click the selected conditions and select **Toggle Negator**. (Available only for MySQL, Oracle, PostgreSQL, SQLite, SQL Server and MariaDB)

### **Save Profile**

You are allowed to save filter criteria to profiles for future use. Just simply control-click on the Filter Wizard and select **Load Profile**, **Delete Profile**, **Save Profile** or **Save Profile As**.

# Chapter 7 - Query

# About Query

A query is used to extract data from the database in a readable format according to the user's request. Navicat provides powerful tools for working with queries: Query Editor for editing the query text directly, and Query Builder, Find Builder or Aggregate Builder for building queries visually. You can save your queries for setting automation tasks. In the main window, click **Query** to open the query object list. You can also click **New Query** in the main toolbar to create a new query without opening any connections.

To open a query using an external editor, control-click it and select **Open with External Editor**. You can set the file path of an external editor in Preferences.

**Hint:** Queries (.sql or .js) are stored under the Settings Location. To open the folder, control-click a query and select **Show in Finder**. If the connection is synchronized to Navicat Cloud, its queries are stored in the Cloud.

### **Query Designer**

| Query Designer is the basic Navicat tool for working with que | eries. |
|---|--------|
|---|--------|

| Button                  | Description  |
|-------------------------|--|
| MySQL, Oracle, PostgreS | QL, SQLite, SQL Server and MariaDB                                     |
| 8- <sub>8</sub>         | Open the SQL Builder for building queries visually.                    |
| Ē                       | Format the codes with the Beautify SQL settings in Editor.             |
| MongoDB                 |  |
| <b>F</b>                | Open the Find Builder for building queries visually.                   |
| ΞΣ                      | Open the Aggregate Builder for building queries visually.              |
| Ē                       | Format the codes in Editor.  |
| <b>\$</b>               | [Grid View] Use the specified type color set on the Type Color pane to |
|                         | highlight cells.   |
| Common                  |  |
| ()                      | Show the Code Snippet pane.  |
|                         | Activate the assistant editors for viewing and editing data.           |
|                         | Export the result of the query.  |
| •                       | Execute the query: Run, Run Current Statement, or Run Selected         |
|                         | (when highlighted code).   |
|                         | MongoDB does not support Run Current Statement.                        |
|                         | Stop the executing query.  |
|                         | Show the Query Plan of the query: Explain or Explain Selected (when    |
|                         | highlighted code).   |

### Open an external file in Navicat

1. Control-click anywhere in the Objects tab and select **Open External Query**. from the pop-up menu.

- 2. Select the file.
- 3. Click Open.

### Save an opened external file as a Navicat query

- 1. In Query Designer, choose File -> Save to Navicat.
- 2. Enter the query name and choose the save location.
- 3. Click OK.

### Save a Navicat query as an external file

- 1. In Query Designer, choose File -> Save As External File.
- 2. Choose the save path and enter the file name.
- 3. Click Save.

# RDBMS

# **SQL Editor**

SQL Editor allows you to create and edit SQL text, prepare and execute selected queries. You can define multiple SQL statements in one query window. Drag-and-drop or double-click an identifier in the right **Identifiers** pane to add it to the editor.

Hint: SELECT statement will be automatically generated in SQL Editor while you build in SQL Builder.

Navicat provides a wide range advanced features, such as compelling code editing capabilities, smart code-completion, SQL formatting, and more.

### **SQL Formatting**

To change the SQL statement format, simply choose from the Format menu -

### Indent

Increase/decrease indent for the selected lines of codes.

### Comment

Comment/uncomment the selected lines of codes.

### **Convert Case**

Format the selected codes into upper/lower case.

Beautify SQL (Available only in Non-Essentials Edition)

Format the selected codes with the Beautify SQL settings.

Beautify SQL With (Available only in Non-Essentials Edition)

Change the SQL beautifier options.

| Option / Button     | Description                                |
|---------------------|--|
| Short Brace Length  | Set the length of the short brace.         |
| Upper case keywords | Format all the SQL keywords to upper case. |
| Beautify            | Save and apply the SQL beautifier options. |

Minify SQL (Available only in Non-Essentials Edition)

Minify the format of the SQL in the SQL Editor.

### Code Completion (Available only in Non-Essentials Edition)

Code completion feature in Navicat pops up a list of suggestions as you type your SQL statement in the editor. It assists you with statement completion and the available properties of database objects, for example databases, tables, fields, views etc with their appropriate icons and information. You can update the code suggestions with latest database information by choosing Edit -> Code Completion -> Update Code Completion Info.

To invoke code completion, just simply press '.' for the available properties of database object currently in the scope.

When the suggestion list appears, press TAB to insert the first item. You can also select the needed item using UPPER ARROW or DOWN ARROW and then press TAB or ENTER.

| 1 | SELECT                                      |                           |  |  |  |  |
|---|---|---------------------------|--|--|--|--|
| 2 | sakila.customer.customer_id,                |                           |  |  |  |  |
| 3 | sakila.customer.store_id,                   | sakila.customer.store_id, |  |  |  |  |
| 4 | sakila.customer.first_name,                 |                           |  |  |  |  |
| 5 | sakila.customer.last_name,                  |                           |  |  |  |  |
| 6 | sakila.customer.email,                      |                           |  |  |  |  |
| 7 | sakila.customer.                            |                           |  |  |  |  |
| 8 | FROM store_id tinyint(3) unsigned           | sakila.customer           |  |  |  |  |
| 9 | sakila.custo                                | sakila.customer           |  |  |  |  |
|   | last_name varchar(45)                       | sakila.customer           |  |  |  |  |
|   | first_name varchar(45)                      | sakila.customer           |  |  |  |  |
|   | email varchar(50)                           | sakila.customer           |  |  |  |  |
|   | <pre>customer_id smallint(5) unsigned</pre> | sakila.customer           |  |  |  |  |
|   | create_date datetime                        | sakila.customer           |  |  |  |  |
|   | <pre>address_id smallint(5) unsigned</pre>  | sakila.customer           |  |  |  |  |
|   | active tinyint(1)                           | sakila.customer           |  |  |  |  |
|   | SelectAll Snippet - General                 |                           |  |  |  |  |
|   | CreateFunction Snippet - MySQL              |                           |  |  |  |  |

In addition, code completion can be invoked by typing a character or pressing ESC on your keyboard for SQL keywords/database objects.

If you select a snippet name from the list, the saved code will be inserted to the editor.

| 1 | SELI             | ECT   |                    |

|   |                  | <pre>session_ssl_status</pre>   | sys                |
|   | 100              | SCHEMA_PRIVILEGES   | information_schema |

Hint: Resize the suggestion list by dragging the lower right corner.

You can enable or disable the code completion feature in Preferences.

### **Clipboard Stack**

When you copy or cut some codes as usual in the editor, the copied content will also be added to Clipboard Stack. Clipboard Stack can store up to 10 items and use the last-in-first-out logic. To paste an item from Clipboard Stack, you can press COMMAND-SHIFT-V. Press COMMAND-SHIFT-V multiple times to cycle through Clipboard Stack.

### **Code Folding**

Code folding feature enables you to collapse blocks of code such that only the first line of the block appears in SQL Editor.

A block of code that can be folded is indicated by an icon  $\Box$  to the left of the first line of the block. A vertical line extends from the icon to the bottom of the foldable code. In contrast, a folded block of code is indicated by an icon  $\Box$  to left of the code block. You can fold the block by clicking  $\Box$  or expand it by clicking  $\Box$ .

### **Brace Highlight**

Navicat supports to highlight the matching brace in the editor, i.e. () .

Note: The cursor must be on a brace to show the highlight.

### **Find and Replace**

### Find

The Find bar is provided for quick searching for the text in the editor. Just simply choose **Edit** -> **Find** -> **Find** from the menu or press COMMAND-F, and then enter a search string.

Incremental searching is used here. As you type, the matched text is found and highlighted instantly. This saves your time from typing the entire text.

| Fi | nd 🗘 🔍                       | 🔕 🔺 🕨 Done |
|----|------------------------------|------------|
| 1  | SELECT                       |            |
| 2  | sakila.customer.customer_id, |            |
| 3  | sakila.customer.store_id,    |            |
| 4  | sakila.customer.first_name,  |            |
| 5  | sakila.customer.last_name,   |            |
| 6  | sakila.customer.email        |            |
| 7  | FROM                         |            |
| 8  | sakila.customer              |            |
| 9  |                              |            |

The search starts at the cursor's current position to the end of the file.

To find the previous or next occurrence, just simply click 4 or .

### Replace

To open the Replace bar, simply choose **Edit** -> **Find** -> **Find** and **Replace** from the menu bar or press OPTION-COMMAND-F. Then, enter the text you want to search and replace.

Click the **Replace** button to replace the first occurrence.

Click the **Replace All** button to replace all occurrences automatically.

| Replace ᅌ | Q~id S |             | Done    |
|-----------|--------|-------------|---------|
|           | ID     | Replace All | Replace |

| Option             | Description   |
|--------------------|---|
| Regular Expression | Search regular expressions.   |
| Match Case         | Enable case sensitive search.                                       |
| Whole Words        | Return the objects that match the entire word of the search string. |

### **Copy with Quotes**

To copy the SQL statement with quotes, just simply control-click the highlighted SQL. Then, select **Copy with Quotes** and choose the format.

### Word Wrap

In the Word Wrap mode, the horizontal scrollbar is removed. SQL statement that exceed the width of the editor window size wraps to the next line. To enable Word Wrap, choose **View** -> **Word Wrap**.

### Zoom In/Zoom Out

Navicat has the ability to zoom in or zoom out the SQL in the editor. The zooming options are available from the **View** menu. The same effect can be achieved with keyboard shortcuts.

Zoom In: [COMMAND-+]

Zoom Out: [COMMAND--]

Reset: [COMMAND-0]

Note: Editors that are opened in different tabs or windows will not be effected by the zoom.

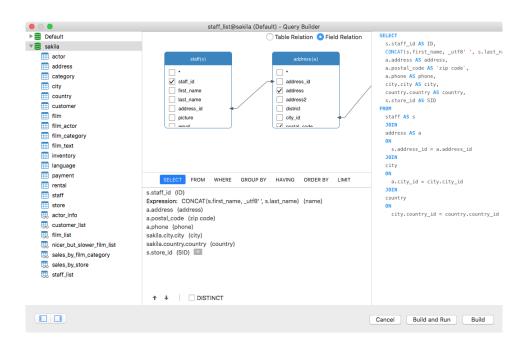

# SQL Builder (Available only in Non-Essentials Edition)

Navicat provides a useful tool called **SQL Builder** for building queries, views and materialized views visually. It allows you to create and edit queries without knowledge of SQL. Even if you are familiar with SQL, the convenient and fluent graphical interface makes it easier to create relations and visualize the query.

In Query Designer, click the  $extsf{T}$  button to open the visual SQL Builder.

All database objects are displayed on the left **Object** pane. Whereas on the middle pane, it is divided into two portions: the upper **Diagram** pane, and the lower **Criteria** pane. When building the query, you can view the auto-generated query on the right **SQL** pane.

**Note:** SQL Builder supports SELECT statement only. Use SQL Editor for creating other complex queries (e.g. INSERT, UPDATE, DELETE).

### Add Objects to Query

The first step is to decide which tables and views you need to add to the query.

To add tables and views to the query, use one of the following methods:

- Drag them from the Object pane to the Diagram pane.
- Double-click them on the Object pane.

You can set aliases for tables, views and subqueries by double-clicking the object title on the Diagram pane and entering the name to use as an alias for the object name.

After you have added objects to the diagram, you can use the **FROM** tab to adjust the query to your needs.

- To change the object, click the object and select an identifier.
- To add the table alias, click **<Alias>**.

|       | SELECT      | FROM            | WHERE     | GROUP BY            | HAVING | ORDER BY | LIMIT |  |
|-------|-------------|-----------------|-----------|---------------------|--------|----------|-------|--|
| sakil | a.staff (s) |                 |           |                     |        |          |       |  |
|       |             |                 |           |                     |        |          |       |  |
| JOIN  | [s.addre    | ss id = a.      | address i | d1                  |        |          |       |  |
|       |             |                 |           |                     |        |          |       |  |
|       |             |                 |           |                     |        |          |       |  |
|       |             |                 |           |                     |        |          |       |  |
| d     |             |                 |           |                     |        |          |       |  |
| 4     |             |                 |           |                     |        |          |       |  |
| _     |             |                 |           |                     |        |          |       |  |
|       |             | -               |           | manager and a later |        |          |       |  |
| JUIN  | [city.cou   | intry a =       | country.c | ountry_iaj          |        |          |       |  |
| cokil | a.country   | <alian></alian> | + 0.      |                     |        |          |       |  |
| Sakii | a.country   | Salla52         |           |                     |        |          |       |  |
|       |             |                 |           |                     |        |          |       |  |
|       |             |                 |           |                     |        |          |       |  |

You can control-click an object on the Diagram pane and select **Remove**, or simply press DELETE key to remove the selected object from the query.

When you remove an object, Query Builder automatically removes joins that involve that object.

### **Choose Output Fields**

To include fields in the query, use one of the following methods:

- Check the left checkbox of a field name you want to add to the query on the Diagram pane.
- To include all the fields for an object, check the \* checkbox on the Diagram pane.
- To add all fields for all objects, click III on the SELECT tab and select All fields(\*).

The selected fields display on the **SELECT** tab. You can specify additional output field options.

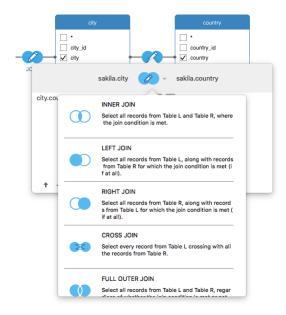

- Check the **DISTINCT** checkbox to force the query to return distinct results.
- To add the field alias, click <Alias> and enter the name.
- Click the identifier and select the **Aggregate** function.
- Use the up arrow and down arrow buttons to change the order of fields.

### **Set Field Association**

Query Builder will automatically join the tables as per the foreign key relations. If you want to associate database objects manually, just select a field from an object and drag it to a field in another object. A connector line appears between the two objects to visually represent the relationship and the join type.

There are two views to show the connector lines: Table Relation and Field Relation. The **Field Relation** view allows you to identify matching fields in two tables, while the **Table Relation** view displays the join relationship between the two tables.

All joins is initially created as INNER JOIN by default. To change the association, click or double-click the connector line on the Diagram pane or click the JOIN keyword on the **FROM** tab, and then select a join type. If a join type is not listed, you can enter a customized one in the **Custom** textbox.

To remove a join, control-click the connector line and select **Remove**.

To modify the join condition, control-click a connector line and select Edit Join, or click the condition on the FROM tab.

|   | SELECT      | FROM                      | WHERE    | GROUP BY     | HAVING | ORD | ER BY |
|---|-------------|---------------------------|----------|--------------|--------|-----|-------|
| sakila.staff (s)<br>LEFT JOIN [s.address_<br>sakila.address (a)   |             | dress_id]                 |          |              |        |     |       |
| JOIN [a.citv id = citv.ci<br>sakila.city <alias><br/>JOIN [city.country_id =<br/>sakila.country (c) +</alias> | In<br>c.c D | sert<br>sert Bra<br>emove | cket     |              |        |     |       |
|   |             | dit SQL<br>onvert T       | ō Subqu  | ery          |        |     |       |
|   | C           | lear And                  | Convert  | t To USING ( | Clause |     |       |
|   |             | roup Wi<br>ngroup         | th Brack | et           |        |     |       |

The pop-up menu options of the FROM tab:

| Option                  | Description   |
|-------------------------|---|
| Insert                  | Add an identifier, an expression or a subquery.         |
| Insert Bracket          | Add a pair of parentheses.                              |
| Remove                  | Remove the identifier, expression or subquery.          |
| Clear and Convert to    | Remove the ON condition and convert it to USING clause. |
| USING Clause            |   |
| Clear and Convert to ON | Remove the USING condition and convert it to ON clause. |
| Clause                  |   |
| Group with Bracket      | Add parentheses to group the selected conditions.       |
| Ungroup                 | Remove the parentheses.                                 |

### **Set Filter Criteria**

When retrieving data, you may want to set up a filtering expression. To filter data returned by the query, control-click a field on the Diagram pane and select **WHERE** and an operator.

The condition is added to the **WHERE** tab. You can edit the value there by clicking **<Value>**. If you want to add a condition with parentheses, click . You can change a logical operator (and/or) by clicking it. Use the up arrow and down arrow buttons to change the order of conditions.

| SELECT FROM             | WHERE GROUP BY HAVING ORDER BY LIMIT                |
|-------------------------|---|
| s.staff_id < 10 OR<br>( |   |
| s.store id = 2 AND      | Toggle Negator                                      |
| s.active <> 1 + 0.      | Insert<br>Insert Custom<br>Insert Bracket<br>Remove |
|                         | Group with Bracket<br>Ungroup                       |

The pop-up menu options of the WHERE tab:

| Option         | Description                           |
|----------------|---------------------------------------|
| Toggle Negator | Reverse the meaning of the condition. |
| Insert         | Add a condition.                      |

| Insert Custom      | Add a custom condition.                           |
|--------------------|---|
| Insert Bracket     | Add a pair of parentheses.                        |
| Remove             | Remove the condition.                             |
| Group with Bracket | Add parentheses to group the selected conditions. |
| Ungroup            | Remove the parentheses.                           |

### **Group Resulting Data**

You can set the conditions for grouping query records by control-clicking a field in the Diagram pane and selecting **GROUP BY** -> **Add Fields**.

The condition is added to the **GROUP BY** tab. Use the up arrow and down arrow buttons to change the order of fields.

On the **HAVING** tab, you can filter summarized data or grouped data. Select the identifiers, operators, aggregate or enter expressions to include in the condition. Use the up arrow and down arrow buttons to change the order of conditions.

The pop-up menu options of the HAVING tab:

| Option             | Description                                       |
|--------------------|---|
| Toggle Negator     | Reverse the meaning of the condition.             |
| Insert             | Add a condition.                                  |
| Insert Custom      | Add a custom condition.                           |
| Insert Bracket     | Add a pair of parentheses.                        |
| Remove             | Remove the condition.                             |
| Group with Bracket | Add parentheses to group the selected conditions. |
| Ungroup            | Remove the parentheses.                           |

### **Sort Resulting Data**

You can set the way of sorting query records by control-clicking a field on the Diagram pane and selecting **ORDER BY** -> **ASC** or **DESC**. The condition will be added to the ORDER BY tab.

### Limit Resulting Data

On the LIMIT tab, you can limit your query results to those that fall within a specified range.

### Offset

Specify the number of records to be skipped. It is optional.

### Limit

Specify the number of records to be displayed.

**Note:** Available only for MySQL, PostgreSQL, SQLite and MariaDB.

### Add Expressions/Subqueries

You can add an expression or a subquery to further limit the query results. On the **FROM** tab, click and select the **Expression/Subquery** tab.

After entered an expression or a subquery, confirm editing by pressing the ENTER key. It will be added to the Diagram pane indicates that the statement contains an expression or a subquery and identifies the columns it is on.

By clicking the *k* button, you will be switched to a subquery layer where you can build it visually in the same way as the main query.

You can always go back to the main query by clicking (Main Query).

### **View Generated SQL**

The **SQL** pane presents a read-only, formatted representation of the SQL generated by Query Builder. You can copy the SQL that appears in the SQL pane for use in other tools. In a subquery layer, you can enable **Show Current Layer Only** to show the subquery SQL.

### **Query Parameters**

Query supports using of parameters inside the query text. You can set query parameters to add variable values to a query each time you run it. The parameter should appear as an identifier with **\$** at its beginning, quote with **[**], e.g. [\$any\_name].

Execute the query and the **Input Parameters** dialog is provided for you to enter the desired data you wish to search. Check the **Raw Mode** option to pass the inputted values to the query without quotation marks.

# Debug Oracle Query (Available only in Non-Essentials Edition)

To debug an Oracle query, click 🚳 on the toolbar to launch the Oracle Debugger.

Enter the parameters if the query has input parameters.

### **Query Results**

You can run the query in any servers. Select the target connection, database and/or schema from the drop-down menu on the toolbar, and then click . If the query statement is correct, the query executes and, if the query statement is

supposed to return data, the **Result** tab opens with the data returned by the query. If an error occurs while executing the query, execution stops, the appropriate error message is displayed.

The **Result** tab displays the result data, returned by the query, as a grid. Data can be displayed in two modes: Grid View and Form View. See Data Viewer for details.

Note: Navicat supports to return 20 result sets.

You can choose to show results below the editor or in a new tab by choosing View -> Results -> Show Below Editor or Show in New Page.

You are allowed to run selected portion of query, just simply highlight SQL in SQL Editor and click **>**. To run the current statement your cursor is on (position the cursor within the desired statement), just simply click and hold the button and select **Run Current Statement**.

### **Custom Tab Name**

To customize the names of the result tabs, simply add -- NAME:tab\_name or /\*NAME:tab\_name\*/ before each SELECT statement in the SQL Editor.

|               | SQL Editor  | Message | actor | payment | Profile | Status |
|---------------|-------------|---------|-------|---------|---------|--------|
| 1 Name:act    | or          |         |       |         |         |        |
| 2 SELECT * FR | OM actor;   |         |       |         |         |        |
| 3             |             |         |       |         |         |        |
| 4 Name:pay    | ment        |         |       |         |         |        |
| 5 SELECT * FR | OM payment; |         |       |         |         |        |

### Show Profile and Status (Available only for MySQL and MariaDB)

To show the profile and status when running the query, simply choose **View** -> **Show Profile and Status** and click **b** on the toolbar.

The Profile tab displays the query profile: Table lock, System lock, Statistic, etc.

Note: For MySQL 5.0, supported from 5.0.37. For MySQL 5.1, supported from 5.1.24.

The Status tab displays the query status: Bytes received, Bytes sent, etc.

# MongoDB

### **Script Editor**

Script Editor allows you to create and edit a script, prepare and execute selected script. Drag-and-drop or double-click an identifier in the right **Identifiers** pane to add it to the editor.

Hint: Script will be automatically generated in Script Editor while you build in Find Builder or Aggregate Builder.

Navicat provides a wide range advanced features, such as compelling code editing capabilities, smart code-completion, script formatting, and more.

### **Script Formatting**

To change the script format, simply choose from the Format menu -

### Indent

Increase/decrease indent for the selected lines of codes.

### Comment

Comment/uncomment the selected lines of codes.

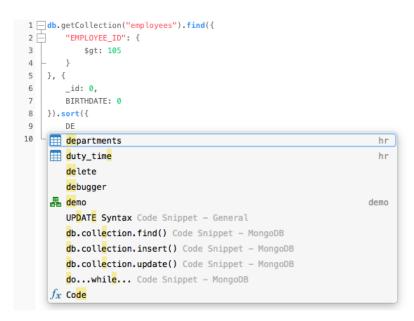

Beautify Script (Available only in Non-Essentials Edition)

Format the selected codes.

### Code Completion (Available only in Non-Essentials Edition)

Code completion feature in Navicat pops up a list of suggestions as you type your script in the editor. It assists you with database names, collection names, view names, document field names and shell methods with their appropriate icons and information. You can update the code suggestions with latest database information by choosing Edit -> Code Completion -> Update Code Completion Info.

Code completion can be invoked by typing a dot (.), a character or pressing ESC.

When the suggestion list appears, press TAB to insert the first item. You can also select the needed item using UPPER ARROW or DOWN ARROW and then press TAB or ENTER.

If you select a snippet name from the list, the saved code will be inserted to the editor.

| 1  | <mark>— db .</mark> 🤉 | <pre>getCollection("employees").find({</pre> |        |
|----|-----------------------|--|--------|
| 2  | Ė.                    | "EMPLOYEE_ID": {                             |        |
| 3  |                       | \$gt: 105                                    |        |
| 4  | +                     | }  |        |
| 5  | }, +                  | [  |        |
| 6  |                       | _id: 0,                                      |        |
| 7  |                       | BIRTHDATE: 0                                 |        |
| 8  | }).                   | sort({                                       |        |

|    |                       | <pre>continue</pre>                          |        |
|    |                       | COMMENTS Code Snippet - MongoDB              | [,]    |
|    |                       | constructor                                  |        |
|    | æ                     | <pre>config</pre>                            | config |
|    | -                     | cowcow                                       | COWCOW |
|    | $f_x$                 | Code   |        |
|    | $f_x$                 | Code (code, scope)                           |        |
|    |                       | db.collection.find() Code Snippet - MongoDB  |        |

Hint: Resize the suggestion list by dragging the lower right corner.

You can enable or disable the code completion feature in Preferences.

### **Clipboard Stack**

When you copy or cut some codes as usual in the editor, the copied content will also be added to Clipboard Stack. Clipboard Stack can store up to 10 items and use the last-in-first-out logic. To paste an item from Clipboard Stack, you can press COMMAND-SHIFT-V. Press COMMAND-SHIFT-V multiple times to cycle through Clipboard Stack.

### **Code Folding**

Code folding feature enables you to collapse blocks of code such that only the first line of the block appears in Script Editor.

A block of code that can be folded is indicated by an icon  $\Box$  to the left of the first line of the block. A vertical line extends from the icon to the bottom of the foldable code. In contrast, a folded block of code is indicated by an icon  $\boxplus$  to left of the code block. You can fold the block by clicking  $\Box$  or expand it by clicking  $\boxplus$ .

|                      | <pre>db.getCollection("employees").find({</pre> |
|----------------------|---|
| 2 庄 "EMPLOYEE_ID": { |   |
| 5                    | }, {  |
| 6                    | _id: 0,   |
| 7                    | BIRTHDATE: 0                                    |
| 8                    | <pre>}).sort({</pre>                            |
| 9                    | "DEPARTMENT_ID": 1                              |
| 10                   | -})   |

### **Brace Highlight**

Navicat supports to highlight the matching brace in the editor, i.e. () .

Note: The cursor must be on a brace to show the highlight.

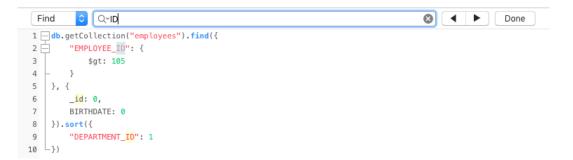

#### **Find and Replace**

#### Find

The Find bar is provided for quick searching for the text in the editor. Just simply choose **Edit** -> **Find** -> **Find** from the menu or press COMMAND-F, and then enter a search string.

Incremental searching is used here. As you type, the matched text is found and highlighted instantly. This saves your time from typing the entire text.

The search starts at the cursor's current position to the end of the file.

To find the previous or next occurrence, just simply click 4 or .

#### Replace

To open the Replace bar, simply choose **Edit** -> **Find** -> **Find** and **Replace** from the menu bar or press OPTION-COMMAND-F. Then, enter the text you want to search and replace.

Click the **Replace** button to replace the first occurrence.

Click the **Replace All** button to replace all occurrences automatically.

| Replace ᅌ | QID | 8 |       |         | Done    |
|-----------|-----|---|-------|---------|---------|
|           | NUM |   | Repla | ace All | Replace |

| Option             | Description   |
|--------------------|---|
| Regular Expression | Search regular expressions.   |
| Match Case         | Enable case sensitive search.                                       |
| Whole Words        | Return the objects that match the entire word of the search string. |

#### **Copy with Quotes**

To copy the script with quotes, just simply control-click the highlighted script. Then, select **Copy with quotes** and choose the format.

#### Word Wrap

In the Word Wrap mode, the horizontal scrollbar is removed. Script that exceed the width of the editor window size wraps to the next line. To enable Word Wrap, choose **View** -> **Word Wrap**.

#### Zoom In/Zoom Out

Navicat has the ability to zoom in or zoom out the script in the editor. The zooming options are available from the **View** menu. The same effect can be achieved with keyboard shortcuts.

Zoom In: [COMMAND-+]

Zoom Out: [COMMAND--]

Reset: [COMMAND-0]

Note: Editors that are opened in different tabs or windows will not be effected by the zoom.

## Find Builder (Available only in Non-Essentials Edition)

Navicat provides Find Builder for building queries visually to select documents in a collection or view. It allows you to create and edit queries without knowledge of the *find* command.

In Query Designer, click the 🖽 button to open the visual Find Builder.

|   | Find Builder              |                |         |
|---|---------------------------|----------------|---------|
| Collection/View:                              | employees                 | <b>v</b>       |         |
| Filt  | ter Projection Sort Limit | Script Preview |         |
| <pre>     EMPLOYEE_ID &gt; 200 Nu     (</pre> | lumber + 0+               |                |         |
| т 🕈   |                           |                |         |
|   |                           | Ca             | ncel OK |

Select the name of the collection or view to query from the **Collection/View** drop-down menu.

#### Filter

In this tab, you can specify selection filters for the query. Documents that meet the conditions will be returned. If you not specify the filter, all documents will be returned. See Filter Wizard for details.

#### **Projection**

In this tab, you can choose which fields to include or exclude in the returned documents. If you not specify the projection, all fields will be returned.

#### Sort

In this tab, you can sort the returned documents by fields in ascending or descending order.

#### Limit

In this tab, you can limit the maximum number of documents to return and set the number of documents to skip.

# Aggregate Builder (Available only in Non-Essentials Edition)

Navicat provides Aggregate Builder for building queries visually to return computed results. It allows you to create and edit queries without knowledge of the *aggregate* command.

In Query Designer, click the 🖽 button to open the visual Aggregate Builder.

| • • •                       |                           | Aggreg    | ate Builder    |   |        |    |
|-----------------------------|---------------------------|-----------|----------------|---|--------|----|
|                             | Collection/View:          | employees | ; ~            |   |        |    |
|                             |                           | Pipeline  | Script Preview |   |        |    |
| Operator Exp                | pression                  |           |                |   |        |    |
| \$match 🛟 {                 |                           |           |                |   |        |    |
| \$group {                   |                           |           |                |   |        |    |
| \$sort ‡ {<br>\$limit ‡ 100 | 0                         |           |                |   |        |    |
|                             |                           | Exp       | ression        |   |        |    |
| 3 field: {                  | PLOYEE_ID",<br>: "SALARY" |           |                |   |        |    |
|                             |                           |           |                | ( | Cancel | ОК |

Select the name of the collection or view to query from the Collection/View drop-down menu

#### **Pipeline**

In this tab, you can add aggregation pipeline stages. In the **Operator** column, select an expression operator. An expression template will be generated in the **Expression** column, you can modify the template.

# **Query Results**

You can run the query in any servers. Select the target connection and database from the drop-down menu on the toolbar, and then click 
If the query script is correct, the query executes and, if the query script is supposed to return data, the **Result** tab opens with the data returned by the query. If an error occurs while executing the query, execution stops, the appropriate error message is displayed.

The **Result** tab displays the result data, returned by the query, as a grid. Data can be displayed in three modes: Grid View, Tree View and JSON View. See Data Viewer for details.

Note: Navicat only returns the last result data.

You can choose to show results below the editor or in a new tab by choosing View -> Results -> Show Below Editor or Show in New Page.

You are allowed to run selected portion of query, just simply highlight script in the editor and click 🕨.

# Code Snippets (Available only in Non-Essentials Edition)

Code Snippets provide a easy way for you to insert reusable code into editor when writing statements or scripts. The Code Snippet pane is on the right side of the editor. If the editor window is docked to the Navicat main window, you can click the () icon in the Information pane to open the library.

The library includes built-in and user-defined snippets. Choose a label from the drop-down menu or enter a search string in the Search box to filter the list. If you want to show the available snippets according to your database type, you can control-click anywhere on the library and disable **Hide Snippets For Other Database Type**.

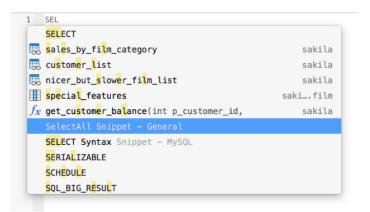

Built-in snippets are non-editable. A user-defined snippet can be edited by double-clicking it in the library and clicking **Edit**. If you want to hide the built-in snippets, you can control-click anywhere on the library and disable **Show Preset Snippets**.

#### **Use Code Snippets**

There are two ways to insert a snippet into the editor.

• You can start typing the name of a snippet in the editor. Smart code completion will pop up a list of suggestions for the word completion automatically. Select a snippet name from the list, the saved code will be inserted to the editor.

• You can simply drag and drop a snippet from the library into the editor.

After inserting the snippet with placeholders to the editor, you can easily navigate to them by clicking on one of the placeholders, and then using the TAB key and entering the information.

#### **Create Code Snippets**

You can create your own code snippets and add them to the library. To create a code snippet, select your desired code in the editor, then control-click and select **Create Snippet**, or simply drag and drop the selected code to the Code Snippet pane.

Alternatively, click () in the Code Snippet pane. If you use this method, you must manually enter the code in the New Snippet window; code selected in the editor is not automatically added to the Code box.

**Hint:** Code snippets (.nsnippet) are stored under the default path, e.g. ~/Library/Application Support/PremiumSoft CyberTech/Navicat CC/Common/Snippet.

| Option / Button   | Description  |
|-------------------|--|
| Untitled text box | Enter the name of the snippet that displays in the library and the code completion list. |
| Database Type     | Choose the database server type of the snippet.  |
| Label             | Choose an existing label or enter a new label name for the snippet.                      |
| Remarks           | Enter a description for the snippet that displays in the library.                        |
| Code              | Enter the code.  |
| To                | Add a placeholder by highlighting any words in the code and click this button. The       |
|                   | placeholder will be highlighted in light green.  |
| =0                | Remove a placeholder by highlighting it in the code and click this button.               |

# Chapter 8 - Model (Available only in Navicat Premium and Enterprise Edition)

# About Model

**Model** is a powerful tool for creating and manipulating database models. In the main window, click **Model** to open the model object list.

Note: Available only for MySQL, Oracle, PostgreSQL, SQLite, SQL Server and MariaDB.

Some of key features are listed here:

• Create and manipulate conceptual/logical/physical models.

Note: Only Navicat Premium supports conceptual and logical models.

- Reverse engineer a database/schema, tables or views to a physical model.
- Forward engineer a physical model to a sql file or database/schema.
- Create and edit table structures directly.

To create a model, click **b** from the object toolbar. The New Model window will pop up for you to select the **Database**, **Version** and/or **Edition**.

**Hint:** Model files (.ndm2/.ndml2/.ndmc2) are saved under the default path, e.g. ~/Library/Application Support/PremiumSoft CyberTech/Navicat CC/Navicat Premium/Profiles. To open the folder, control-click a model file and select **Show in Finder**. If the model is synchronized to Navicat Cloud, it is stored in the Cloud.

#### Open an external model file

- 1. Control-click anywhere in the Objects tab and select **Open External Model** from the pop-up menu.
- 2. Browse the file and click **Open** in the dialog window.

#### Save an opened external file as a Navicat model

- 1. In Model Designer, choose File -> Save to Navicat.
- 2. Enter the model name and choose the save location.
- 3. Click OK.

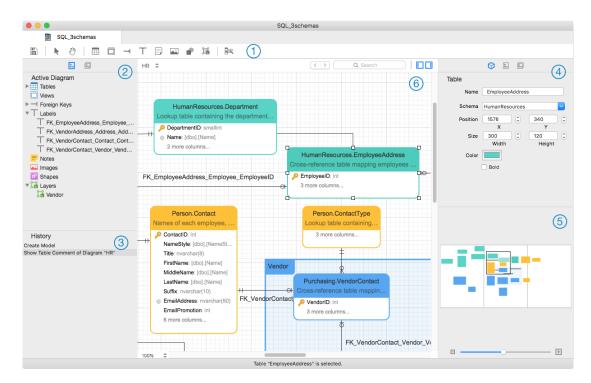

#### Save a Navicat model as an external file

- 1. In Model Designer, choose File -> Save As External File.
- 2. Choose the save path and enter the file name.

3. Click Save.

# Model Window

The Model Window consists of a toolbar, several panes and a diagram canvas for you to design your model. A model file can have more than one diagram. Each diagram is represented by a tab in the model. To create a new diagram, choose **Diagram** -> **New Diagram** from the menu bar.

#### 1 Toolbar

The Toolbar is located near the top of the Model Window. The buttons display in the toolbar depend on the model type (physical, logical and conceptual). You can use the toolbar to perform some basic tasks, such as adding tables, entities or views, applying Auto Layout feature, etc.

#### 2 Explorer Pane

The Explorer pane has two tabs: Decide and Active Diagram. The Model tab holds all tables or views in the model, including those used in each individual diagram. The Model tab holds all schemas, tables, views, entities in the model, including those used in each individual diagram. You can simply drag an object from the Model tab and drop to the active diagram canvas. The Active Diagram tab holds all the objects (tables, views, foreign keys, layers, notes, images, etc) added to the active diagram. If the Explorer pane is hidden, choose View -> Show Explorer from the menu bar.

#### 3 History Pane

The History pane shows all the actions that you have taken. Simply click an action to restore that state. If the History pane is hidden, choose **View** -> **Show Explorer** and **Show History** from the menu bar.

#### 4 Properties Pane

The Properties pane includes the 🗐 Model, 🗟 Diagram and 🎯 Object tabs for setting default properties for your model. You can edit the properties settings of the model, the active diagram and the selected objects quickly. If the Properties pane is hidden, choose View -> Show Properties from the menu bar.

| Option               | Description  |
|----------------------|--|
| Begin Style          | The style of the arrow's back.   |
| Black and white      | Check this box to change the diagram color to black and white.               |
| Bold                 | Check this box or press COMMAND-B to bold the table, view, entity,           |
|                      | foreign key, relation or shape.  |
| Border Color         | The color of the shape's border.   |
| Cap Style            | The cap style of the line/arrow.   |
| Cardinality          | The foreign key/relation cardinality of the table/entity.                    |
| Case Sensitive       | The case sensitivity of the table or view names. Available only for MySQL    |
|                      | and MariaDB models.  |
| Color                | The color of the object.   |
| Dash Style           | The dash style of the line/arrow.  |
| Database             | The database server type of the model.                                       |
| Database Version     | The database version of the model.   |
| Default Database     | The default database of the model.   |
| Default Schema       | The default schema of the model.   |
| End Style            | The style of the arrow's front.  |
| Entity Font          | The font and font size of tables/entities.                                   |
| Font                 | The font and font size of notes, labels or layers.                           |
| Font Color           | The font color of notes, labels or layers.                                   |
| Join Style           | The join style of the line/arrow.  |
| Model Type           | The type of the model.   |
| Model Version        | The version of the model.  |
| Name                 | The name of the object.  |
| Notation             | The notation of the diagram. The notation options are depended on the        |
|                      | model type.  |
| Note Style           | The style of the note. The value for this can be Note or Label.              |
| Opacity              | The transparency of the image/shape.   |
| Pages                | The width and height of the diagram (number of papers).                      |
| Position             | The number of pixels from the object to the left side (X) and the top (Y) of |
|                      | the canvas.  |
| Referenced           | The referenced (parent) table, view or entity.                               |
| Referencing          | The referencing (child) table, view or entity.                               |
| Schema               | The database/schema name of the table/view.                                  |
| Show entity comments | Check this box to show the entity comments in the diagram.                   |
| Show field comments  | Check this box to show the field comments in the diagram.                    |
| Show name            | Check this box to show the name of the foreign key, relation or shape.       |
| Show schema name     | Check this box to show the database/schema names of the tables/views in      |

|                         | the diagram.  |
|-------------------------|---|
| Show table comments     | Check this box to show the table comments in the diagram. |
| Show view relationships | Check this box to show the relationship line of the view. |
| Size                    | The width and height of the object.                       |
| Visible                 | Check this box to show the foreign key or relation lines. |

#### **5** Overview Pane

The Overview pane displays the whole active diagram in the canvas. To zoom in or zoom out the selected area of the diagram, adjust the slider. Same effect can be achieved with keyboard shortcuts:

Zoom In: [COMMAND-Mousewheel Up]

Zoom out: [COMMAND-Mousewheel Down]

If the Overview pane is hidden, choose View -> Show Properties and Show Overview from the menu bar.

#### 6 Diagram Canvas

You can design your diagram on the Diagram Canvas. All added objects can be moved (by dragging them with mouse or by keyboard), resized, aligned to the grid, etc.

# **Physical Models**

# **Create Physical Models**

Navicat allows you to create physical models, including tables, fields, views, foreign key constraints and other physical properties of the database/schema.

In the New Model window, choose the Model Type and select the target Database and Version if necessary.

After creating a physical model, you can compare and synchronize it to an existing database/schema or export it to a SQL file.

## Add Databases / Schemas

When creating a new model, a database/schema (named Default) is automatically created and it is the default database/schema. All newly added objects (tables and views) are belonged to the default database/schema.

You can view all databases/schemas with their objects as tree structure on the Explorer's Model tab.

The pop-up menu options of a database/schema in the Explorer's Model tab include:

| Option                   | Description   |
|--------------------------|---|
| New Database / New       | Create a database/schema.   |
| Schema                   |   |
| Delete Database / Delete | Delete the selected database/schema including its objects from the model. |
| Schema                   | The default database/schema cannot be deleted.                            |

| Rename                    | Change the name of the database/schema.                          |
|---------------------------|--|
| Set As Default Database / | Set the selected database/schema as the default database/schema. |
| Set As Default Schema     |  |

# Add Tables

To add a new table, click the <a>button</a> from the toolbar and click anywhere on the canvas. To add an existing table from the Explorer's Model tab, simply drag and drop the selected table from the Model tab to the canvas.

For Default diagram notation, the 🤌 icon means the field is a primary key. The 🔷 icon indicates that the field serves as an index.

Note: If you control-click a field, you can choose to add, insert, delete, rename the field and set the field as primary key.

The pop-up menu options of the table object in the canvas include:

| Option              | Description   |  |
|---------------------|---|--|
| Design Table        | Edit the table structure in a table designer, e.g. fields, indexes, foreign |  |
|                     | keys, etc. The tabs and options in the designer depend on the diagram       |  |
|                     | database type you are chosen.   |  |
| Add Related Objects | Add all related tables/views to the selected table.                         |  |
| Add Field           | Add fields to the existing table.   |  |
| Cut                 | Remove the table from the diagram and put it on the clipboard.              |  |
| Сору                | Copy the table from the diagram to the clipboard.                           |  |
| Paste               | Paste the content from the clipboard into the diagram.                      |  |
| Select All Tables   | Select all tables in the diagram.   |  |
| Delete              | Delete a table from the diagram or from both diagram and model.             |  |
| Rename              | Change the name of the table.   |  |
| Color               | Change the color of the table.  |  |
| Size to Fit         | Resize the table automatically to fit its contents.                         |  |
| Bring to Front      | Bring the table to the foreground.  |  |
| Send to Back        | Move the table to the background.   |  |

## Add Views

To add a new view, click the 🔲 button from the toolbar and click anywhere on the canvas. To add an existing view from the Explorer's Model tab, simply drag and drop the selected view from the Model tab to the canvas.

**Note:** If you control-click the view connector, you can choose to add or delete vertices and change its color, or go to the source view or the target table.

The pop-up menu options of the view object in canvas include:

| Option | Description |
|--------|-------------|
|--------|-------------|

| Design View         | Edit the view structure in a view designer. The tabs and options in the |  |
|---------------------|---|--|
|                     | designer depend on the diagram database type you are chosen.            |  |
| Add Related Objects | Add all related tables/views to the selected view.                      |  |
| Cut                 | Remove the view from the diagram and put it on the clipboard.           |  |
| Сору                | Copy the view from the diagram to the clipboard.                        |  |
| Paste               | Paste the content from the clipboard into the diagram.                  |  |
| Select All Views    | Select all views in the diagram.  |  |
| Delete              | Delete a view from the diagram or from both diagram and model.          |  |
| Rename              | Change the name of the view.  |  |
| Color               | Change the color of the view.   |  |
| Size to Fit         | Resize the view automatically to fit its contents.                      |  |
| Bring to Front      | Bring the view to the foreground.                                       |  |
| Send to Back        | Move the view to the background.  |  |

# Add Foreign Keys

To add a foreign key, click the  $\prec$  button from the toolbar and drag and drop a field from the child table to the parent table. To show/hide the linked name label, simply check/uncheck the **Show name** option in the Properties pane.

When you move your mouse over a foreign key connector, the border of the parent and the child tables turn to green and blue respectively. Also, the referenced fields and the referencing fields are highlighted.

The pop-up menu options of the foreign key in canvas include:

| Option                     | Description  |  |
|----------------------------|--|--|
| Design Relation            | Edit the foreign key in a table designer. The options in the designer depend |  |
|                            | on the diagram database type you are chosen.                                 |  |
| Cardinality on table_name1 | Set the cardinality on table_name1: None, One and Only One, Many, One        |  |
|                            | or Many, Zero or One, Zero or Many.  |  |
| Cardinality on table_name2 | Set the cardinality on table_name2: None, One and Only One, Many, One        |  |
|                            | or Many, Zero or One, Zero or Many.  |  |
| Add Vertex                 | Add a vertex on a foreign key connector.                                     |  |
| Delete Vertex              | Delete a vertex on a foreign key connector.                                  |  |
| Delete All Vertices        | Delete all vertices on a foreign key connector.                              |  |
| Paste                      | Paste the content from the clipboard into the diagram.                       |  |
| Select All Relations       | Select all foreign keys in the diagram.                                      |  |
| Delete                     | Delete a foreign key from both diagram and model.                            |  |
| Color                      | Change the color of the foreign key.   |  |

# **Logical Models**

# **Create Logical Models**

Navicat Premium allows you to create logical models, including entities, attributes and relations.

In the New Model window, choose Logical as Model Type.

# Add Entities

To add a new entity, click the 🖽 button from the toolbar and click anywhere on the canvas. To add an existing entity from the Explorer's Model tab, simply drag and drop the selected entity from the Model tab to the canvas.

For Default diagram notation, the  $\stackrel{P}{\sim}$  icon means the attribute is a primary key. The  $\stackrel{\circ}{\sim}$  icon indicates that the attribute serves as an index.

**Note:** If you control-click an attribute, you can choose to add, insert, delete, rename the attribute and set the attribute as primary key.

| <b>T</b> I |               | . C. (1       | and the sector due |                 |
|------------|---------------|---------------|--------------------|-----------------|
| The pop-up | menu options  | of the entity | object in the      | canvas include: |
| ine pop ap | monia optiono |               | 00,000             | ourrao mon      |

| Option              | Description   |
|---------------------|---|
| Design Entity       | Edit the entity structure in an Entity Designer, e.g. attributes and relations. |
| Add Related Objects | Add all related objects to the selected entity.                                 |
| Add Attribute       | Add attributes to the existing entity.  |
| Cut                 | Remove the entity from the diagram and put it on the clipboard.                 |
| Сору                | Copy the entity from the diagram to the clipboard.                              |
| Paste               | Paste the content from the clipboard into the diagram.                          |
| Select All Entities | Select all entities in the diagram.   |
| Delete              | Delete an entity from the diagram or from both diagram and model.               |
| Rename              | Change the name of the entity.  |
| Color               | Change the color of the entity.   |
| Size to Fit         | Resize the entity automatically to fit its contents.                            |
| Bring to Front      | Bring the entity to the foreground.   |
| Send to Back        | Move the entity to the background.  |

## Add Relations

To add a relation, click the  $\checkmark$  button from the toolbar and drag and drop an attribute from the child entity to the parent entity. To show/hide the linked name label, simply check/uncheck the **Show name** option in the Properties pane.

When you move your mouse over a relation connector, the border of the parent and the child entities turn to green and blue respectively. Also, the referenced attributes and the referencing attributes are highlighted.

The pop-up menu options of the relation in the canvas include:

| Option               | Description  |
|----------------------|--|
| Design Relation      | Edit the relation in an Entity Designer.                               |
| Cardinality on       | Set the cardinality on entity_name1: None, One and Only One, Many, One |
| entity_name1         | or Many, Zero or One, Zero or Many.                                    |
| Cardinality on       | Set the cardinality on entity_name2: None, One and Only One, Many, One |
| entity_name2         | or Many, Zero or One, Zero or Many.                                    |
| Add Vertex           | Add a vertex on a relation connector.                                  |
| Delete Vertex        | Delete a vertex on a relation connector.                               |
| Delete All Vertices  | Delete all vertices on a relation connector.                           |
| Paste                | Paste the content from the clipboard into the diagram.                 |
| Select All Relations | Select all relations in the diagram.                                   |
| Delete               | Delete a relation from both diagram and model.                         |
| Color                | Change the color of the relation.                                      |

# **Conceptual Models**

# **Create Conceptual Models**

Navicat Premium allows you to create conceptual models, including entities and relations.

In the New Model window, choose Conceptual as Model Type.

# Add Entities

To add a new entity, click the 🖽 button from the toolbar and click anywhere on the canvas. To add an existing entity from the Explorer's Model tab, simply drag and drop the selected entity from the Model tab to the canvas.

| Option              | Description   |
|---------------------|---|
| Add Related Objects | Add all related objects to the selected entity.                   |
| Cut                 | Remove the entity from the diagram and put it on the clipboard.   |
| Сору                | Copy the entity from the diagram to the clipboard.                |
| Paste               | Paste the content from the clipboard into the diagram.            |
| Select All Entities | Select all entities in the diagram.                               |
| Delete              | Delete an entity from the diagram or from both diagram and model. |
| Rename              | Change the name of the entity.                                    |
| Color               | Change the color of the entity.                                   |
| Size to Fit         | Resize the entity automatically to fit its contents.              |
| Bring to Front      | Bring the entity to the foreground.                               |
| Send to Back        | Move the entity to the background.                                |

The pop-up menu options of the entity object in the canvas include:

# Add Relations

To add a relation, click the  $\prec$  button from the toolbar and drag the child entity and drop to the parent entity. To show/hide the linked name label, simply check/uncheck the **Show name** option in the Properties pane.

When you move your mouse over a relation connector, the border of the parent and the child entities turn to green and blue respectively.

| The pop-up menu options of the relation in the canvas include: |  |
|--|--|
|  |  |

| Option               | Description  |
|----------------------|--|
| Cardinality on       | Set the cardinality on entity_name1: None, One and Only One, Many, One |
| entity_name1         | or Many, Zero or One, Zero or Many.                                    |
| Cardinality on       | Set the cardinality on entity_name2: None, One and Only One, Many, One |
| entity_name2         | or Many, Zero or One, Zero or Many.                                    |
| Add Vertex           | Add a vertex on a relation connector.                                  |
| Delete Vertex        | Delete a vertex on a relation connector.                               |
| Delete All Vertices  | Delete all vertices on a relation connector.                           |
| Paste                | Paste the content from the clipboard into the diagram.                 |
| Select All Relations | Select all relations in the diagram.                                   |
| Delete               | Delete a relation from both diagram and model.                         |
| Color                | Change the color of the relation.                                      |

# **Diagram Layout**

# Work with Diagram Canvas

#### **Show Grid Lines**

To turn the grid on in the diagram canvas, choose Diagram -> Show Grid Lines from the menu bar.

#### Snap to Grid

To align objects on the canvas with the grid, choose **Diagram** -> **Snap to Grid** from the menu bar.

#### **Change Diagram Notation**

To change the notation of the diagram, choose **Diagram -> Diagram Notation** from the menu bar.

**Note:** The options depend on the diagram type you are chosen.

| Option  | Description   |
|---------|---|
| Default | The default notation style used in Navicat.                         |
| Simple  | A simple notation style. The table or view will only show the name. |
| IDEF1X  | The ICAM DEFinition language information modeling method.           |
| UML     | Universal Modeling Language style.                                  |

| IE (Crow's Foot)        | Crow's Foot notation style.                                   |
|-------------------------|---|
| Black and White         | Change the color of the diagram to black and white.           |
| Show Schema Name        | Show the schema names of the tables and views in the diagram. |
| Show View Relationships | Show the relationship lines of views in the diagram.          |
| Show Entity Comments    | Show the entity comments in the diagram.                      |
| Show Table Comments     | Show the table comments in the diagram.                       |
| Show Field Comments     | Show the field comments in the diagram.                       |

#### **Change Diagram Dimensions**

To change the number of pages used in the diagram, choose **Diagram** -> **Diagram Dimensions** from the menu bar and set the **Width** and the **Height**.

#### **Align Objects**

To align objects on the canvas, select more than one object (tables, entities, views, notes, labels, images or shapes), then control-click and select Alignment -> Align Left, Align Center, Align Right, Align Top, Align Middle or Align Bottom.

#### **Change Objects Distribution**

To distribute objects on the canvas, select more than one object (tables, entities, views, notes, labels, images or shapes), then control-click and select **Distribute** -> **Horizontal** or **Vertical**.

#### Change Page Setup

To change paper size, orientation and margins, choose File -> Page Setup.

#### Apply Auto Layout

To automatically arrange objects on the canvas, click the <sup>BK</sup> button. To change the Auto Layout format settings, simply choose **Diagram** -> **Auto Layout With** from the menu bar and set the following options:

| Option                | Description  |
|-----------------------|--|
| Space Between Objects | The distance between the objects in the diagram.     |
| Number of Trials      | The quality of the auto layout output.               |
| Auto Dimension        | Choose the suitable diagram dimension automatically. |
| Tables resize to fit  | Resize the table to fit its content automatically.   |

## Add Labels

Labels are typically used to help document the diagram design process. For example, to explain a grouping table objects. To add a new label, click the  $\top$  button from the toolbar and click anywhere on the canvas.

The pop-up menu options of the label object in canvas include:

| Option | Description |
|--------|-------------|
|--------|-------------|

| Edit              | Change the content of the label.                               |
|-------------------|--|
| Cut               | Remove the label from the diagram and put it on the clipboard. |
| Сору              | Copy the label from the diagram to the clipboard.              |
| Paste             | Paste the content from the clipboard into the diagram.         |
| Select All Labels | Select all labels in the diagram.                              |
| Delete            | Delete a label from the diagram.                               |
| Size to Fit       | Resize the label automatically to fit its contents.            |
| Bring to Front    | Bring the label to the foreground.                             |
| Send to Back      | Move the label to the background.                              |

## Add Notes

Notes are typically used to help document the diagram design process. For example, to explain a grouping table objects. To add a new note, click the 🖹 button from the toolbar and click anywhere on the canvas.

The pop-up menu options of the note object in canvas include:

| Option           | Description   |
|------------------|---|
| Edit             | Change the content of the note.                               |
| Style            | Change the style of the note: Note or Label.                  |
| Cut              | Remove the note from the diagram and put it on the clipboard. |
| Сору             | Copy the note from the diagram to the clipboard.              |
| Paste            | Paste the content from the clipboard into the diagram.        |
| Select All Notes | Select all notes in the diagram.                              |
| Delete           | Delete a note from the diagram.                               |
| Color            | Change the color of the note.                                 |
| Size to Fit      | Resize the note automatically to fit its contents.            |
| Bring to Front   | Bring the note to the foreground.                             |
| Send to Back     | Move the note to the background.                              |

## Add Images

You can insert images (BMP, JPG, JPEG or PNG files) to your model for design or identification purposes. To add a new image, click the 🗳 button from the toolbar and click anywhere on the canvas. Then, select an image file in the Open dialog box.

The pop-up menu options of the image object in canvas include:

| Option  | Description  |  |
|---|--|--|
| Reset Size  | Reset the size of the image to its original size.  |  |
| Reset Aspect Ratio  | Maintain the image original width to height ratio. |  |
| Cut Remove the image the diagram and put it on the clipboard. |  |  |
| Сору  | Copy the image from the diagram to the clipboard.  |  |

| Paste             | Paste the content from the clipboard into the diagram. |
|-------------------|--|
| Select All Images | Select all images in the diagram.                      |
| Delete            | Delete an image from the diagram.                      |
| Bring to Front    | Bring the image to the foreground.                     |
| Send to Back      | Move the image to the background.                      |

## Add Shapes

Navicat includes some pre-defined shapes for creating database model diagrams: line, arrow, rectangle, ellipse, user, database, cloud, trigger, server, desktop or mobile. To add a new shape, click the **P** button from the toolbar and choose the type of shape. Then, click anywhere on the canvas. To show/hide the linked name label, simply check/uncheck the **Show name** option in the Properties pane.

The pop-up menu options of the shape object in canvas include:

| Option              | Description  |
|---------------------|--|
| Reset Aspect Ratio  | Maintain the shape original width to height ratio.                           |
|                     | Only for rectangle, ellipse, user, database, cloud, trigger, server, desktop |
|                     | and mobile.  |
| Add Vertex          | Add a vertex on a line or arrow.   |
|                     | Only for line and arrow.   |
| Delete Vertex       | Delete a vertex on a line or arrow.  |
|                     | Only for line and arrow.   |
| Delete All Vertices | Delete all vertices on a line or arrow.                                      |
|                     | Only for line and arrow.   |
| Cut                 | Remove the shape from the diagram and put it on the clipboard.               |
| Сору                | Copy the shape from the diagram to the clipboard.                            |
| Paste               | Paste the content from the clipboard into the diagram.                       |
| Select All Shapes   | Select all the shapes in the diagram.  |
| Delete              | Delete a shape from the diagram.   |
| Color               | Change the color of the shape.   |
| Border Color        | Change the color of the shape's border.                                      |
|                     | Only for rectangle, ellipse, user, database, cloud, trigger, server, desktop |
|                     | and mobile.  |
| Bring to Front      | Bring the shape to the foreground.   |
| Send to Back        | Move the shape to the background.  |

## Add Layers

Layers are used to help organize objects (e.g. tables, notes, images, etc) on the canvas. You can add all related objects to the same layer. For example, you may choose to add all your sales related tables to one layer. To add a new layer, click the 🗯 button from the toolbar and click anywhere on the canvas.

The pop-up menu options of the layer object in canvas include:

| Option            | Description  |
|-------------------|--|
| Cut               | Remove the layer from the diagram and put it on the clipboard. |
| Сору              | Copy the layer from the diagram to the clipboard.              |
| Paste             | Paste the content from the clipboard into the diagram.         |
| Select All Layers | Select all layers in the diagram.                              |
| Delete            | Delete a layer from the diagram.                               |
| Color             | Change the color of the layer.                                 |
| Size to Fit       | Resize the layer automatically to fit its contents.            |
| Bring to Front    | Bring the layer to the foreground.                             |
| Send to Back      | Move the layer to the background.                              |

# Reverse Engineering

Reverse Engineering is one of the key features of Model. This feature allows you to load already existing database structures to create new diagrams. It supports importing databases, schema, tables or views.

Navicat provides a step-by-step wizard for you to complete the task:

- 1. Choose File -> Import from Database.
- 2. Select a connection.
- 3. Select databases, schemas, tables or views you want to import.
- 4. Click Start.

You can also simply create a new model using reverse engineering in the Navicat main window. Control-click an opened database/schema, tables or views and select **Reverse Database to Model**, **Reverse Schema to Model**, **Reverse Tables to Model** or **Reverse Views to Model** from the pop-up menu.

# Forward Engineering

## Synchronize to Database

The **Synchronize to Database** feature allows you to compare a model with an existing database or schema, states the differences between their structures, and offers synchronizing the structures in model to the target connection.

Navicat provides a step-by-step wizard for you to complete the task:

- 1. Choose File -> Synchronize to Database.
- 2. Select the source database, schema, and select the target connection, database, schema.
- 3. Click **Options** and select the compare / advanced options.

- 4. Click **Compare** to show the differences between source and target objects.
- 5. Select the objects you want to synchronize.
- 6. Click **Deploy** to generate a set of scripts.
- 7. Click Execute.

#### **Choose Connections**

The first step is to define connections, databases and/or schemas for the source model and the target connection.

#### **Choose Comparing Options**

Then, click the **Options** button to select the compare / advanced options for the synchronization process.

Note: The following options depend on the diagram database type you are chosen and sort in ascending order.

#### Compare auto increment value

Check this option if you want to compare the auto increment values of tables.

#### Compare character set

Check this option if you want to compare the character sets of tables.

#### **Compare checks**

Check this option if you want to compare checks.

#### **Compare collation**

Check this option if you want to compare the collations of tables.

#### **Compare definers**

Check this option if you want to compare the definers of views.

#### **Compare excludes**

Check this option if you want to compare excludes.

#### Compare foreign keys

Check this option if you want to compare table foreign keys.

#### Compare identity last value

Check this option if you want to compare the identity last values of tables.

#### **Compare indexes**

Check this option if you want to compare indexes.

#### **Compare owners**

Check this option if you want to compare the owners of the objects.

#### **Compare partitions**

Check this option if you want to compare table partitions.

#### Compare primary keys

Check this option if you want to compare table primary keys.

#### **Compare rules**

Check this option if you want to compare rules.

#### **Compare storage**

Check this option if you want to compare table storages.

#### **Compare table options**

Check this option if you want to compare other table options.

#### **Compare tables**

Check this option if you want to compare tables.

#### **Compare triggers**

Check this option if you want to compare triggers.

#### **Compare uniques**

Check this option if you want to compare uniques.

#### **Compare views**

Check this option if you want to compare views.

#### **Drop with CASCADE**

Check this option if you want to drop the dependent database objects with the CASCADE option.

#### **Identifier Case Sensitivity**

Ignore or consider the case of identifiers when mapping, or use the server default setting.

#### **Start Comparison**

Click the **Compare** button to compare the source model and the target database.

#### **View Comparison Results**

After comparing structures, the tree view shows the differences between the source and target databases or schemas. All objects are checked in the tree view by default. Uncheck the objects you do not want to apply to the target. You can expand the table objects to view the detailed structure.

| Group by Operation 💲                         | sakila3.ndm2<br>sakila | → <b>(</b> | MySQL 5.7<br>sakila |
|--|------------------------|------------|---------------------|
| Source Object                                | (                      | Operation  | Target Object       |
| ▼  | ed)                    |            |                     |
| ▼ <mark>=</mark>                             |                        | +          | iii country         |
| country_id                                   |                        | =          | country_id          |
| country                                      |                        | =          | country             |
| name   |                        | =          | name                |
|  |                        | ×          | last_update         |
| (Primary Key)                                |                        | =          | (Primary Key)       |
| ✓ (Table Options)                            |                        | =          | (Table Options)     |
| ▶ <mark>=</mark> <u>m</u> city               |                        | +          | iii city            |
| ▶ ✓ + Objects to be created (0 of 0 selected | ed)                    |            |                     |
| ▶ 🗹 🗙 Objects to be deleted (1 of 1 selecte  | d)                     |            |                     |
| ▶ 🗌 = No operation (13 objects)              |                        |            |                     |

You can choose to group the objects in the tree views by object type or operation by selecting **Group by Object Type** or **Group by Operation**.

| Operation | Description  |  |
|-----------|--|--|
| +         | Object exists in both source and target databases/schemas, but they have             |  |
|           | different definition. The target object will be modified based on the source object. |  |
| +         | Object does not exist in the target database/schema. It will be created in the       |  |
|           | target.  |  |
| ×         | Object does not exist in the source database/schema. The target object will be       |  |
|           | deleted.   |  |
| =         | Object exists in both source and target databases/schemas and they have              |  |
|           | identical definition. No operation will be applied.                                  |  |

When you selected an object in the tree view, the **DDL Comparison** tab shows the DDL statements of that object in the source and the target, and the **Deployment Script** tab shows the detailed SQL statements of the object that will be executed in the target databases.

|         |  |      |
|         |  |      |
|         |  |      |
|         |  |      |
|         |  |      |
|         |  |      |
|         |  |      |
|         |  |      |
|         |  |      |
|         | Cancel   |      |
|         |  |      |
|         |  |      |
|         |  |      |
|         |  |      |
|         | Save Profile 👻 Load Profile Deployment Options 👻 Back Recompare Execute  | •    |
|         |  |      |

Then, click the **Execute** button to execute the scripts. The window will display the execution progress, execution time, and success or failure messages.

# Export SQL

After finishing your model, you can save table structures and relations from the model into a script file. The **Export SQL** feature generates a SQL file for the script. To start the Export SQL feature, choose **File** -> **Export SQL** from the menu bar.

#### **General Properties**

#### **Export to File**

Set the output file name and location.

#### Select objects to export

Choose objects in the model you wish to export.

#### **Advanced Properties**

Note: The following options depend on the diagram database type you are chosen and sort in ascending order.

#### Drop with CASCADE

Include drop object SQL statements with CASCADE option in the SQL file with this option in on.

#### Include auto increment

Include table auto increment in the SQL file with this option is on.

#### Include character set

Include table and field character set in the SQL file with this option is on.

#### Include checks

Include checks in the SQL file with this option is on.

#### Include collation

Include table collation in the SQL file with this option is on.

#### **Include Drop SQL**

Include drop object SQL statements in the SQL file with this option in on.

#### Include excludes

Include excludes in the SQL file with this option is on.

#### Include foreign keys

Include foreign keys in the SQL file with this option is on.

#### **Include indexes**

Include indexes in the SQL file with this option is on.

#### Include primary keys

Include primary keys in the SQL file with this option is on.

#### Include rules

Include rules in the SQL file with this option is on.

#### Include schema name

Include the schema name in the SQL file with this option is on. Otherwise, only object names are included in SQL statements.

#### **Include triggers**

Include triggers in the SQL file with this option is on.

#### **Include uniques**

Include uniques in the SQL file with this option is on.

#### **Server Version**

Select the server version for the SQL file.

# **Model Conversion**

Navicat allows you to convert your models from one database type to another database type, e.g. MariaDB 10.0 physical model to PostgreSQL 9.0 physical model.

During the conversion, all data types are converted automatically. The conversion process does not change the SQL syntax of views if converting from one database type to another. If the target database version is MySQL 4.0 or below, all views will be removed.

With Navicat Premium, you can also convert your models from one model type to another model type. If you covert a physical model to logical/conceptual model, all views will be converted to entities.

To convert an opened model file, choose **File** -> **Convert Model To**. Then, choose the **Model Type** and select the target **Database** and **Version** if necessary.

# Print & Export Model

#### Print to a printer

Choose File -> Print to send your diagram directly to the printer. You can set the printer option in the pop-up window.

#### Export to a file

Choose File -> Export To and choose the file format to create a PDF, PNG, SVG or JPG file of your diagram.

# Model Hints and Tips

Navicat provides some useful hints to work on the model more effectively.

#### Locate Object in the Diagram Canvas

Object selected in the Explorer's Diagram tab will be highlighted in the Diagram Canvas.

Double-click an object in the Explorer's Diagram tab will jump to the corresponding object in the Diagram Canvas.

#### **Delete Object from Model**

Select an object in the Diagram Canvas and press SHIFT-DELETE.

#### **Open Table/Entity/View Designer**

Double-click a table/entity/view in the Explorer's Model Tab or the Diagram Canvas.

#### Get Table/View Structure (SQL Statement)

Select and copy a table/view in the Diagram Canvas, and paste it to other text editors.

#### **Design Field without Table/Entity Designer**

Select and click a table/entity name and press DOWN ARROW to add/edit fields. Navicat will predict field types according to field names you entered.

#### INTEGER/int/int4/NUMBER

- suffix "id", "no" (if it is the first column, it will be predicted as a primary key)
- suffix "num"
- "qty", "number"
- exactly "age", "count"

#### DECIMAL(10,2)/decimal(10,2)/NUMBER/REAL/money

• suffix "price", "cost", "salary"

#### FLOAT/double/float8/NUMBER/REAL/float

• "size", "height", "width", "length", "weight", "speed", "distance"

#### DATE/datetime/date/TEXT/datetime2

• "date", "time"

#### VARCHAR(255)/varchar(255)/VARCHAR2(255)/TEXT

• other field names

Enter \* before the field name to recognize as primary key. e.g. \*itemNo:int.

Enter : between field name and field type to custom field type, e.g. itemName:varchar(255).

#### **Reorder Field**

Select a table/entity in Diagram Canvas, then press and hold the SHIFT key. Use  $\uparrow$  to drag the field to a desired location.

#### **Delete Field**

Select a table/entity in Diagram Canvas, then press and hold the SHIFT key. Use  $\uparrow$  to drag the desired field out of the table/entity.

#### Add Vertex to Foreign Key/Relation/Line/Arrow

Select a foreign key/relation/line/arrow in Diagram Canvas. Press and hold the SHIFT key and click on it to add vertex.

#### Delete Vertex on Foreign Key/Relation/Line/Arrow

Select a foreign key/relation/line/arrow in Diagram Canvas. Press and hold the SHIFT key and click on the vertex.

#### Switch to Hand Mode

Press and hold the SPACE key, then move the diagram.

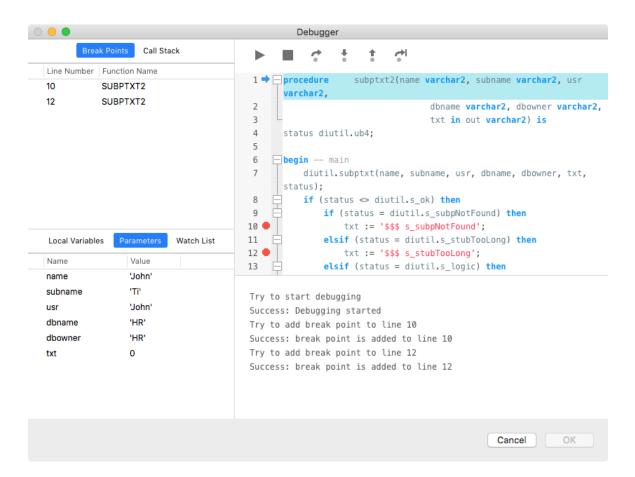

# Chapter 9 - Debugger (Available only in Non-Essentials Edition)

# About Debugger

Navicat provides two code debuggers: **Oracle PL/SQL Debugger** and **PostgreSQL PL/pgSQL Debugger**. With the debuggers, you can toggle breakpoints, fetch call stacks, view variable values, trace the code, etc.

# Oracle PL/SQL Debugger

Oracle PL/SQL Debugger provides step-by-step code debugging for functions, procedures, packages and queries. To launch the debugger, click the 🐱 button in the designer of the mentioned objects.

You can perform the most commonly used actions for debugging on the toolbar or menu:

| Button | Description  |  |  |
|--------|--|--|--|
|        | Start running code in debug mode. Enter the Input Parameters if necessary. The             |  |  |
|        | debugger executes your code until the end of the code or the next breakpoint is reached.   |  |  |
|        | Stop stepping the code. The execution will stop and cannot resume it.                      |  |  |
| t.     | Resume the execution. The current line will be executed. If the line is a procedure or     |  |  |
|        | function call, it will bypass the procedure or function. The counter will then move to the |  |  |
|        | next line of code.   |  |  |
| + •    | Resume the execution. The current line will be executed. If the line is a procedure or     |  |  |

|          | function call, the counter goes to the first statement in the procedure or function.       |
|----------|--|
|          | Otherwise, the counter will move to the next line of code.                                 |
| <b>†</b> | Resume the execution. The remaining part of the code within the current procedure or       |
|          | function will be executed. Subsequently, the counter will jump to the line which is just   |
|          | after the caller of the procedure or function.   |
| <b>*</b> | Resume the execution. The counter will jump to the last line of the procedure or function. |

The **Code** pane shows the code of the procedure or function. You can add/remove breakpoints for debugging by clicking <a>></a> in the grey area beside each statement.

The Breakpoints pane displays all the breakpoints.

The **Call Stack** pane displays a list of procedures and functions as they are called. To jump to a procedure or function, control-click it and select **Jump To**.

The **Local Variables** pane displays all local variables and their values. To add a variable to the watch list, control-click it and select **Add to Watch List**.

The **Parameters** pane displays the inputted parameters. To add a parameter to the watch list, control-click it and select **Add to Watch List**.

The **Watch List** pane displays information about the variables being watched, allowing you to delete or edit watch variables. To edit the value of a watch variable, control-click it and select **Set Value**. To delete a watch variable, control-click a variable and select **Remove Variable**.

The **Log** pane displays the message log when debugging the code and the results after the procedure or function has completed the execution.

# PostgreSQL PL/pgSQL Debugger

PostgreSQL PL/pgSQL Debugger provides step-by-step code debugging for PL/pgSQL procedures/functions. To launch the debugger, click the the button in the function designer.

| 0 🔴 🔵                            |   | Debugger  |
|----------------------------------|---|---|
| Break F<br>Line Number<br>4<br>7 | Function Name<br>unnest_rownum(anyarray)<br>unnest_rownum(anyarray) | <pre> BEGIN BEGIN</pre> |
| Name<br>\$1<br>id<br>element     | Parameters     watch List       Value     {A,B}       NULL     NULL | Try to start debugging<br>Success: Debugging started<br>Try to add break point to line 7<br>Success: break point is added to line 7<br>Try to add break point to line 4<br>Success: break point is added to line 4  |
|                                  |   | Cancel OK   |

You can perform the most commonly used actions for debugging on the toolbar or menu:

| Button   | Description  |  |  |  |
|----------|--|--|--|--|
|          | Start running code in debug mode. Enter the Input Parameters if necessary. The             |  |  |  |
|          | debugger executes your code until the end of the code or the next breakpoint is            |  |  |  |
|          | reached. Keyboard shortcut: F9   |  |  |  |
|          | Stop stepping the code. The execution will stop and cannot resume it.                      |  |  |  |
| ¢.       | Resume the execution. The current line will be executed. If the line is a procedure or     |  |  |  |
|          | function call, it will bypass the procedure or function. The counter will then move to the |  |  |  |
|          | next line of code. Keyboard shortcut: F10  |  |  |  |
| + -      | Resume the execution. The current line will be executed. If the line is a procedure of     |  |  |  |
|          | function call, the counter goes to the first statement in the procedure or function.       |  |  |  |
|          | Otherwise, the counter will move to the next line of code. Keyboard shortcut: F11          |  |  |  |
| <b>†</b> | Resume the execution. The remaining part of the code within the current procedure or       |  |  |  |
|          | function will be executed. Subsequently, the counter will jump to the line which is just   |  |  |  |
|          | after the caller of the procedure or function. Keyboard shortcut: COMMAND-F11              |  |  |  |

The **Code** pane shows the code of the procedure or function. You can add/remove breakpoints for debugging by clicking • in the grey area beside each statement.

The Breakpoints pane displays all the breakpoints.

The **Call Stack** pane displays a list of procedures or functions as they are called. To jump to a procedure or function, control-click it and select **Jump To**.

The Local Variables pane displays all local variables and their values. To add a variable to the watch list, control-click it and select Add to Watch List.

The **Parameters** pane displays the inputted parameters. To add a parameter to the watch list, control-click it and select **Add to Watch List**.

The **Watch List** pane displays information about the variables being watched, allows you to delete or edit watch variables. To edit the value of a variable, control-click it and select **Set Value**. To delete a variable, control-click it and select **Remove Variable**.

The **Log** pane displays the message log when debugging the code and the results after the procedure or function has completed the execution.

# **Chapter 10 - Data Migration Tools**

# **About Data Migration Tools**

Navicat provides a number of powerful tools for working with data, including Import Wizard, Export Wizard, Data Transfer, Data Synchronization, Structure Synchronization, Dump SQL File and Execute SQL File. With those tools, you can migrate your data between different servers, databases and formats easily.

# **Import Wizard**

## **About Import Wizard**

**Import Wizard** allows you to import data to tables/collections from CSV, TXT, XML, DBF and more. You can save your settings as a profile for future use or setting automation tasks. To open the Import Wizard window, click from the object toolbar.

Note: Navicat Essentials edition only supports to import text-based files, such as TXT, CSV, XML and JSON.

**Hint:** You can drag a supported file to the Table/Collection's Objects tab or a database/schema in the Navigation pane. Navicat will pop up the Import Wizard window automatically. If an existing table/collection is highlighted, Navicat will import the file to the highlighted table/collection. Otherwise, it will import the file to a new table/collection.

## **Choose File Format**

Select one of the available import types for the source file.

## **Choose Files**

Click Add File or Add URL to add import source files. Select the Encoding for the source file.

Note: You can add more than one file to import.

#### **ODBC**

#### Setting up an ODBC Data Source Connection

- 1. Install suitable ODBC Administrator and the corresponding driver for file.
- In Applications, select Utilities -> ODBC Administrator; or in Navicat, click the ODBC Administrator button in this step.
- 3. Click the Add button in the User DSN tab.
- 4. Select the appropriate ODBC driver and click the **OK** button.
- 5. Enter required information.
- 6. Click the Finish button to see your ODBC Driver in the list.

Note: You can consult with the driver provider about how to setup the DSN.

#### **Connecting to ODBC Data Source in Navicat**

- 1. Click ... in Import from.
- 2. Choose the data source from the Connection drop-down menu and provide valid username and password.
- 3. All available tables will be included in the list in the next step if connection is success.

# **Choose Record Format / File Options**

#### TXT, CSV

#### **Field Delimiter**

Specify the field separator.

#### **Record Delimiter**

Specify the record separator of the file.

#### **Text Qualifier**

Specify the character that encloses text values.

#### XML

#### Tag that identifies a table row / Tag that identifies a collection row

Define a tag to identify rows.

#### Consider tag attributes as table field / Consider tag attributes as collection field

For example:

<row age="17">

<id>1</id>

<name>sze</name>

#### </row>

With this option is on, Navicat will recognizes "age" as a field together with "id" and "name", otherwise, only "id" and "name" will be imported as fields.

Note: Navicat does not support multiple level of XML file.

#### Excel

Sheets will be shown in the list.

#### **ODBC**, Access

The **Add Query** button allows you to construct a query to import only certain rows from your source tables. In other words, import only rows that satisfy the criteria set by you. Tables or queries will be shown in the list.

## **Choose Format Options**

The following options depend on the file format chose in the first step.

#### **Field Name Row**

Indicate which row should Navicat recognize as field names.

#### **Data Row**

Indicate which row should Navicat start and stop reading the actual data.

Note: If no field names are defined for the file, uncheck the Field Name Row option.

#### **Date Format**

Specify the format for date.

#### Four Digit Years

Check this option to display four digits for years.

#### **Date Delimiter**

Specify the date separator.

#### **Time Delimiter**

Specify the time separator.

#### **Decimal Symbol**

Specify the decimal separator for decimal number.

#### **Thousand Separator**

Specify the thousand separator for number.

## Map Tables / Collections

You are allowed to define a new name or choose to import into an existing table/collection from the drop-down menu.

Note: If you type a new name in Target Table / Target Collection, the box in Is New will be shown YES automatically.

| Source File | Target Table | Is New |
|-------------|--------------|--------|
| jobs        | 📪 jobs1 🛟    | YES    |

For importing multiple tables/collections, all tables/collections will be shown in the list.

| Source File | Target Table | Is New    |  |
|-------------|--------------|-----------|--|
| countries   | countries    | <b>\$</b> |  |
| departments | departments  | ÷         |  |

| locations   | locations    | \$        |  |
| regions     | regions      | \$        |  |

# Map Fields

Navicat will make assumption on the field types and length in the source table/collection. You are allowed to choose desired type from the drop-down menu.

Hint: For importing multiple tables/collections, select other tables/collections from the drop-down menu.

|   | Source File Field | Target Table Field | Туре      |    | Length | Scale | Pr | rimary Key   |
|---|-------------------|--------------------|-----------|----|--------|-------|----|--------------|
| / | FIRST_NAME        | FIRST_NAME         | varchar   | \$ | 120    |       | 0  |              |
| / | LAST_NAME         | LAST_NAME          | varchar   | \$ | 150    |       | 0  |              |
| 1 | EMAIL             | EMAIL              | varchar   | ŧ  | 150    |       | 0  |              |
| 1 | PHONE_NUMBER      | PHONE_NUMBER       | varchar   | \$ | 120    |       | 0  |              |
|   | HIRE_DATE         | HIRE_DATE          | timestamp | \$ | 0      |       | 0  |              |
| 2 | JOB_ID            | JOB_ID             | varchar   | ŧ  | 60     |       | 0  |              |
| 1 | SALARY            | SALARY             | float8    | \$ | 0      |       | 0  |              |
|   | COMMISSION_PCT    | COMMISSION_PCT     | float8    | \$ | 0      |       | 0  |              |
|   | DEPARTMENT_ID     | DEPARTMENT_ID      | float8    | ŧ  | 0      |       | 0  |              |
| 1 | BIRTHDATE         | BIRTHDATE          | timestamp | \$ | 0      |       | 0  |              |
|   | EMPLOYEE_ID       | EMPLOYEE_ID        | int4      | \$ | 0      |       | 0  | $\checkmark$ |
| / | MANAGER_ID        | MANAGER_ID         | int4      | \$ | 0      |       | 0  |              |

If you are importing data into existing tables/collections, you might need to map the source field names manually to the target or control-click and select **Smart Match All**, **Ordinally Match All** and **Unmatch All** from the pop-up menu for quick mapping.

| Source File Field | EMPLOYEE ID    | Primary Key |  |  |  |
|-------------------|----------------|-------------|--|--|--|
| FIRST_NAME        | FIRST NAME     |             |  |  |  |
| LAST_NAME         | LAST NAME      | >           |  |  |  |
| EMAIL             | EMAIL          | >           |  |  |  |
| PHONE_NUMBER      | PHONE_NUMBER   |             |  |  |  |
| HIRE_DATE         | HIRE_DATE      | >           |  |  |  |
| JOB_ID            | ✓ JOB_ID       |             |  |  |  |
| SALARY            | SALARY         |             |  |  |  |
| COMMISSION_PCT    | COMMISSION_PCT | ;           |  |  |  |
| DEPARTMENT_ID     | MANAGER_ID     | : .         |  |  |  |
| BIRTHDATE         | DEPARTMENT_ID  | >           |  |  |  |
| EMPLOYEE_ID       | BIRTHDATE      | >           |  |  |  |
| MANAGER_ID        | MANAGER_ID     | •           |  |  |  |

| r                 |                    |          |            |
|-------------------|--------------------|----------|------------|
| Source File Field | Target Table Field | Pr       | rimary Key |
| FIRST_NAME        | FIRST_NAME         | \$       |            |
| LAST_NAME         | LAST_NAME          | <u>^</u> |            |
| EMAIL             | EMAIL Smart N      | latch /  | All        |
| PHONE_NUMBER      | PHONE Ordinall     | y Mato   | ch All     |
| HIRE_DATE         | HIRE_D Unmate      | h All    |            |
| JOB_ID            | JOB_ID             | IT AII   |            |
| SALARY            | SALARY             | \$       |            |
| COMMISSION_PCT    | COMMISSION_PCT     | \$       |            |
| DEPARTMENT_ID     | DEPARTMENT_ID      | \$       |            |
| BIRTHDATE         | BIRTHDATE          | \$       |            |
| EMPLOYEE_ID       | EMPLOYEE_ID        | \$       |            |
| MANAGER_ID        | MANAGER_ID         | \$       |            |

If you are importing via ODBC, the **Condition Query** button opens the **WHERE** dialog where you can specify a *WHERE* clause to import only certain rows from your source. In other words, import only rows that satisfy the criteria set by you.

Hint: Do not include the word WHERE in the clause.

## **Choose Import Mode**

Select the import mode that defines how the data being imported.

| npor       | t Mode   |
|------------|--|
| <b>O</b> A | Append: add records to the destination table                                 |
| N          | Note: Append will be used for new table whichever import mode is selected.   |
| ΟL         | Jpdate: update record in destination with matching record from source        |
|            | Append/Update: if record exists in destination, update it. Otherwise, add it |
|            | Delete: delete records in destination that match records in source           |
| 00         | Copy: delete all records in destination, repopulate from the source          |

Hint: To activate the remaining options, you must enable Primary Key in the previous step.

| Source File Field | Target Table Field |          | Primary Key  |
|-------------------|--------------------|----------|--------------|
| FIRST_NAME        | FIRST_NAME         | Ŷ        |              |
| LAST_NAME         | LAST_NAME          | $\hat{}$ |              |
| EMAIL             | EMAIL              | ¢        |              |
| PHONE_NUMBER      | PHONE_NUMBER       | Ŷ        |              |
| HIRE_DATE         | HIRE_DATE          |          |              |
| JOB_ID            | JOB_ID             | $\hat{}$ |              |
| SALARY            | SALARY             | $\hat{}$ |              |
| COMMISSION_PCT    | COMMISSION_PCT     | ¢        |              |
| DEPARTMENT_ID     | DEPARTMENT_ID      | $\hat{}$ |              |
| BIRTHDATE         | BIRTHDATE          | $\hat{}$ |              |
| EMPLOYEE_ID       | EMPLOYEE_ID        | $\hat{}$ | $\checkmark$ |
| MANAGER_ID        | MANAGER_ID         | Ŷ        |              |

Click the **Advanced** button for more settings. The following options depend on the connection server type.

#### Run multiple queries in each execution

Execute multiple SQL statements at once, which will make the import process faster.

#### Use empty string as NULL

Import NULL value if the source data field contains empty string.

#### Ignore foreign key constraint

Ignore the checking of foreign key constraints during the import process.

#### **Continue on error**

Ignore errors that are encountered during the import process.

## Save and Start Import

Click the **Start** button to begin the import process. The wizard will display the import progress, execution time, and success or failure messages.

After the import process finished, you can click the View Log button to open the log file.

Hint: Click the Save Profile button to save your settings as a profile.

# **Export Wizard**

## About Export Wizard

**Export Wizard** allows you to export data from tables, collections, views, or query results to any available formats. You can save your settings as a profile for future use or setting automation tasks. To open the Export Wizard window, click , or from the object toolbar.

**Note:** Navicat Essentials edition only supports to export text-based files, such as TXT, CSV, HTML, XML, SQL and JSON.

## **Choose File Format**

Select one of the available export formats for the target file.

## **Choose Saving Path**

You can set the exported file name and location in this step. Click the **Change** button to change the default export location.

Check the box next to the object name that you want to export. The highlighted object in the object pane is checked automatically. The file extension changes according to the selected export type in the first step. If you are exporting selected objects into the same target file, set them with the same file name, you can control-click the grid and select **Export Selected to Same File**. When the file format is Excel, each object will be exported as a sheet in the Excel file.

**Note:** For exporting query results, ensure the query is saved before running Export Wizard. Otherwise, no source object displayed in here.

#### Encoding

Select the encoding for the exported file.

#### Add timestamp

Check this option if you want your file name specifies the timestamp of the export is run. Select the date/time format from the drop-down menu.

| cities            | cities.xlsx          |  |
|-------------------|----------------------|--|
| iii countries     | countries.xlsx       |  |
| jobs_copy         | jobs_copy.xlsx       |  |
| 📰 spatial_ref_sys | spatial_ref_sys.xlsx |  |
| 🧱 jobs            | jobs.xlsx            |  |
| 🛄 duty_time       | hr.xlsx              |  |
| employees         | employees.xlsx       |  |
| Iocations         | locations.xlsx       |  |
| job_history       | hr.xlsx              |  |
| departments       | departments.xlsx     |  |
| regions           | regions.xlsx         |  |

## Choose Table / Collection Fields

You can select what fields to export. All the fields are selected in the list by default. If you want to omit some fields to be exported, uncheck the **All fields** option first and then uncheck those fields in the list.

Note: For exporting query result, the wizard will skip this step.

## **Choose Additional Options**

The following options depend on the file format chose in the first step.

#### Include column titles

Field names will be included into the exported file if this option is on.

#### Blank if zero

Leave it blank if the field content is 0.

#### Append on output file(s)

Append records to the existing file

#### Continue on error

Ignore errors that are encountered during the export process.

#### Record Delimiter, Field Delimiter, Text Qualifier

Specify the record separator, the field separator and the character that encloses text values.

#### Date Order, Date Delimiter

Specify the format for date and the date separator.

#### Zero Padding Date

Add a leading zero to pad days and months to two digits if necessary.

#### **Time Delimiter**

Specify the time separator.

#### **Decimal Symbol**

Specify the decimal separator for decimal number.

#### **Binary Data Encoding**

Set binary data are exported as Base64 encoded or no encoding in the file.

## Save and Start Export

Click the **Start** button to begin the export process. The wizard will display the export progress, execution time, and success or failure messages.

Hint: Click the Save Profile button to save your settings as a profile.

## Data Transfer (Available only in Non-Essentials Edition)

## About Data Transfer

Navicat allows you to transfer objects from one database/schema to another, or to a sql file (RDBMS) or a Javascript file (MongoDB). The target database and/or schema can be on the same server as the source or on another server. To open the Data Transfer window, choose **Tools** -> **Data Transfer** from the menu bar.

You can save your settings as a profile for future use or setting automation tasks. To open a saved profile, click the **Load Profile** button and select a profile from the list.

Hint: Profiles are saved under the default path, e.g. ~/Library/Application Support/PremiumSoft CyberTech/Navicat CC/Common/Profiles

**Hint:** You can drag tables/collections to a database/schema in the Navigation pane. If the target database/schema is within the same connection, Navicat will copy the tables/collections directly. Otherwise, Navicat will pop up the Data Transfer window.

## Choose Connections & Advanced Options (Step 1)

#### **Choose Source and Target Connections**

In the Data Transfer window, define connections, databases and/or schemas for **Source Database** and **Target Database**. You can click  $\rightleftharpoons$  to swap the source and target settings.

You can also transfer your selected database objects directly to a text file. Select the **File** option. Choose the target path, **SQL Format** and **Encoding** for the file.

**Note:** Navicat Premium supports transferring table with data across different server types, e.g. from MySQL to Oracle. If the source connection is MongoDB, Navicat Premium only can transfer data to MongoDB server.

#### **Choose Advanced Options**

Then, click the **Options** button to set the advanced options. The options depend on the source and target connection server types and sort in ascending order.

#### **Continue on error**

Ignore errors that are encountered during the transfer process.

#### Convert object name to

Check this option if you require convert object names to Lower case or Upper case during the process.

#### **Create collections**

Check this option if you want to create collections in the target database. Suppose this option is unchecked and collections already exist in the target database, then all data will be appended to the destination collections.

#### **Create tables**

Check this option if you want to create tables in the target database. Suppose this option is unchecked and tables already exist in the target database/schema, then all data will be appended to the destination tables.

#### Create target database/schema if not exist

Create a new database/schema if the database/schema specified in the target server does not exist.

#### Drop target objects before create

Check this option if database objects already exist in the target database and/or schema, the existing objects will be deleted once the data transfer starts.

#### Drop with CASCADE

Check this option if you want to drop the dependent database objects with the cascade option.

#### Include auto increment

Include auto increment in the table with this option is on.

#### Include character set

Include character set in the table with this option is on.

#### **Include checks**

Include checks in the table with this option is on.

#### **Include definers**

Include the definers of the objects with this option is on.

#### Include engine/table type

Include table type with this option is on.

#### Include excludes

Include exclusion constraints in the table with this option is on.

#### Include foreign key constraints

Include foreign keys in the table with this option is on.

#### **Include indexes**

Include indexes in the table with this option is on.

#### Include other collection options

Include other options in the collection with this option is on.

#### Include other table options

Include other options in the table with this option is on.

#### **Include owners**

Include the owners of the objects with this option is on.

#### Include rules

Include rules in the table with this option is on.

#### **Include triggers**

Include triggers in the table with this option is on.

#### Include uniques

Include uniques in the table with this option is on.

#### **Insert records**

Check this option if you require all records to be transferred to the destination database and/or schema.

#### Lock source tables

Lock the tables in the source database and/or schema during the data transfer process.

#### Lock target tables

Lock the tables in the target database and/or schema during the data transfer process.

#### Use complete insert statements

Insert records using complete insert syntax.

Example:

INSERT INTO `users` (`ID Number`, `User Name`, `User Age`) VALUES ('1', 'Peter McKindsy', '23');

INSERT INTO `users` (`ID Number`, `User Name`, `User Age`) VALUES ('2', 'Johnson Ryne', '56');

INSERT INTO `users` (`ID Number`, `User Name`, `User Age`) VALUES ('0', 'katherine', '23');

#### Use DDL from SHOW CREATE TABLE

If this option is on, DDL will be used from SHOW CREATE TABLE.

#### Use DDL from sqlite\_master

If this option is on, DDL will be used from the SQLITE\_MASTER table.

#### Use delayed insert statements

Insert records using DELAYED insert SQL statements.

Example:

INSERT DELAYED INTO `users` VALUES ('1', 'Peter McKindsy', '23');

INSERT DELAYED INTO `users` VALUES ('2', 'Johnson Ryne', '56');

INSERT DELAYED INTO `users` VALUES ('0', 'katherine', '23');

#### Use extended insert statements

Insert records using extended insert syntax.

Example: INSERT INTO `users` VALUES ('1', 'Peter McKindsy', '23'), ('2', 'Johnson Ryne', '56'), ('0', 'Katherine', '23');

#### Use hexadecimal format for BLOB

Insert BLOB data as hexadecimal format.

#### Use single transaction

Check this option if you want to use a single transaction during the data transfer process.

#### **Use transaction**

Check this option if you want to use transaction during the data transfer process.

## Choose Objects & Transfer Mode (Step 2)

#### **Choose Objects to Transfer**

All the database objects are unselected in the **Database Objects** list by default. Check the database objects that you want to transfer.

| Database Objects:                                     |                                     |
|---|-------------------------------------|
| Tables (0/17)   |                                     |
| All tables during execution (*)                       | Transfer Mode:                      |
| 🕨 🚍 🌐 Custom (4/17)                                   | 🔿 Auto 💽 Advanced                   |
| Views (0/8)   | Target Name: sales_by_film_category |
| All views during execution (*)                        | ✓ Transfer as table                 |
| 🔻 🚍 🔜 Custom (2/8)                                    | Number of rows per batch: 1000      |
| 🗌 🐯 actor_full_name                                   |                                     |
| 🗌 🐯 actor_info  |                                     |
| 🗹 聴 customer_list                                     |                                     |
| 🗌 🐯 film_list   |                                     |
| nicer_but_slower_film_list                            |                                     |
| 🗹 🚟 sales_by_film_category(Advanced)                  |                                     |
| sales_by_store  |                                     |
| □ 🐯 staff_list  |                                     |
| $\nabla f_x$ Functions (*)                            |                                     |
| $\checkmark f_x$ All functions during execution ( * ) |                                     |
| Final formula (0/6) $f_x$ Custom (0/6)                |                                     |
| Events (*)  |                                     |
| All events during execution (*)                       |                                     |
| Custom (0/1)  |                                     |

| All <objects> during execution</objects> | All the database objects being transferred to the target            |
|--|---|
| (*)                                      | database/schema, all newly added database objects will also be      |
|  | transferred without amending the data transfer profile.             |
| Custom                                   | Only the checked database objects will be transferred. However, if  |
|  | you add any new database objects in the source database and/or      |
|  | schema after you create your data transfer profile, the newly added |
|  | database objects will not be transferred unless you manually        |
|  | modify the Database Objects list.                                   |

#### **Choose Transfer Mode for Tables / Views**

You can customize the **Transfer Mode** for the selected table/view. If you choose **Auto**, Navicat will transfer the table/view using the default settings. If your want to customize the transfer settings, choose **Advanced** and set the following options:

| Options                  | Description  |  |  |  |  |
|--------------------------|--|--|--|--|--|
| Target Name              | Enter the name of the table / view that will be created in the target        |  |  |  |  |
|                          | database.  |  |  |  |  |
| All fields               | Transfer all fields in the table.  |  |  |  |  |
| Custom fields            | You can choose which fields to transfer. Click + and select the fields.      |  |  |  |  |
|                          | Change the name of the target field if necessary.                            |  |  |  |  |
| All rows                 | Transfer all records in the table.   |  |  |  |  |
| Number of rows per batch | Specify the number of rows of data per batch. If it is not enabled, all data |  |  |  |  |

|                          | in the table is sent to the target server as a single transaction.          |
|--------------------------|---|
| Custom recordsets        | Filter the records for transfer. Click + and enter a expression.            |
| Recordset Generator      | If your table is large, you may want to divide it to several record sets to |
|                          | avoid connection timeout. The Recordset Generator can divide the            |
|                          | records into a number of recordsets as evenly as possible between the       |
|                          | start and end values of a field. Set Field Name, Start Value, End Value     |
|                          | and Number of Recordsets in the pop-up window.                              |
| SQL Preview              | Show the SQL statements for returning the recordsets.                       |
| Use transaction for each | Use a transaction for each recordset during the data transfer process.      |
| recordset                |   |
| Transfer as table        | The view will be transferred to the target database as a new table.         |

## Confirm & Start Data Transfer (Step 3)

A summary table lists all selected objects that is being transferred to the target database.

|         | Source Object                      | Target Object              | Mode   |
|---------|------------------------------------|----------------------------|--|
|         | category                           | category                   | Advanced(Custom fields, All rows, Number of rows per batch: 1000 |
|         | film                               | film                       | Auto   |
|         | film_text                          | film_text                  | Auto   |
|         | language                           | language                   | Advanced(All fields, All rows)                                   |
| 00      | actor_info                         | actor_info                 | Advanced(Transfer as table, Number of rows per batch: 1000)      |
| 00      | film_list                          | film_list                  | Auto   |
| ~       | nicer_but_slower_film_list         | nicer_but_slower_film_list | Auto   |
| 00      | sales_by_film_category             | sales_by_film_category     | Auto   |
| 00      | sales_by_store                     | sales_by_store             | Auto   |
| 00      | staff_list                         | staff_list                 | Auto   |
| Рx      | All functions during execution (*) |                            |  |
| $\odot$ | All events during execution (*)    |                            |  |

Click the **Start** button to execute the data transfer process. The window will display the execution progress, execution time, and success or failure messages.

# Data Synchronization (Available only in Non-Essentials Edition)

## About Data Synchronization

Navicat allows you to transfer data from one database and/or schema to another with detailed analytical process. In other words, Navicat provides the ability for data in different databases and/or schemas to be kept up-to-date so that each repository contains the same information. To open the Data Synchronization window, choose **Tools** -> **Data Synchronization** from the menu bar.

You can save your settings as a profile for future use or setting automation tasks. To open a saved profile, click the **Load Profile** button and select a profile from the list.

Hint: Profiles are saved under the default path, e.g. ~/Library/Application Support/PremiumSoft CyberTech/Navicat CC/Common/Profiles

**Note:** SQL Server 2000 does not support this feature. For Oracle server, BLOB, CLOB, NCLOB, LONG and LONG RAW data are skipped during the data synchronization process. TIMESTAMP primary key cannot synchronize (insert, update) with Database Link to 9i server. RAW primary key cannot synchronize (insert, update, delete) with Database Link to any server, without error.

Hint: Navicat Premium and Navicat for MySQL support synchronizing between MySQL and MariaDB.

## Choose Connections & Comparing Options (Step 1)

#### **Choose Source and Target Connections**

In the Data Synchronization window, define connections, databases and/or schemas for **Source Database** and **Target Database**. You can click  $\stackrel{\checkmark}{\leftarrow}$  to swap the source and target settings.

#### **Choose Comparing Options**

Then, click the **Options** button to set the comparing options.

#### Insert

Insert records if the records do not exist in the target.

#### Delete

Delete extra records from the target.

#### Update

Update the target if the record is different from the source.

## Choose Table / Collection Mapping (Step 2)

In this step, only tables/collections which contain identical names between the source and target are mapped in the list by default. If you do not want some tables/collections to be synchronized, disable them manually from the drop-down menu.

Keys and fields which contain identical names are also mapped. You can change the mapping in the **Key Mapping** and **Field Mapping** columns.

## View Data Comparison Results (Step 3)

After comparing data, the window shows the number of records that will be inserted, updated or deleted in the target. Uncheck the **Show identical table and others** / **Show identical collection and others** option to hide the tables/collections with identical data and the tables/collections with different structures. All tables/collections with different data and all actions are checked by default. Uncheck the checkbox that you do not want to apply to the target.

| Show identical table and others<br>MySQL<br>sakila<br>MySQL<br>sakila<br>Testing Server 02<br>sakila |               |        |        |        |        |        |  |

When you selected a table/collection in the list, the bottom pane shows data in the source and target. Values that differ between the source and target are highlighted. To view multiple lines data, control-click the grid and select **Show Assistant Viewer**. Uncheck the records that you do not want to apply to the target.

Choose an option from the drop-down menu to show the data.

| Option     | Description   |  |  |  |
|------------|---|--|--|--|
| All Rows   | Show all records in the source and target.                                    |  |  |  |
| Difference | Show all records that are different in the source and target.                 |  |  |  |
| Insert     | Only show the records that do not exist in the target.                        |  |  |  |
| Update     | Only show the records that exist in both source and target, but they have     |  |  |  |
|            | different values.   |  |  |  |
| Delete     | Only show the records that do not exist in the source.                        |  |  |  |
| Same       | Show the records that exist in both source and target and they have identical |  |  |  |
|            | values.   |  |  |  |

Then, click the **Execute** button to execute the scripts. The window will display the execution progress, execution time, and success or failure messages.

# Structure Synchronization (Available only in Non-Essentials Edition)

## About Structure Synchronization

Navicat allows you to compare and modify the table structures and other objects with detailed analytical process. In other words, Navicat compares objects between two databases and/or schemas and states the differential in structure. To open the Structure Synchronization window, choose **Tools** -> **Structure Synchronization** from the menu bar.

You can save your settings as a profile for future use. To open a saved profile, click the **Load Profile** button and select a profile from the list.

Hint: Profiles are saved under the default path, e.g. ~/Library/Application Support/PremiumSoft CyberTech/Navicat CC/Common/Profiles

**Note:** Available only for MySQL, Oracle, PostgreSQL, SQL Server and MariaDB. Navicat Premium and Navicat for MySQL support synchronizing between MySQL and MariaDB.

## Choose Connections & Comparing Options (Step 1)

#### **Choose Source and Target Connections**

In the Structure Synchronization window, define connections, databases and/or schemas for **Source Database** and **Target Database**. You can click  $\stackrel{\Rightarrow}{\leftarrow}$  o swap the source and target settings.

#### **Choose Comparing Options**

Then, click the **Options** button to set the database/schema comparing options. The options depend on the connection server type and sort in ascending order.

#### Compare auto increment value

Check this option if you want to compare the auto increment values of tables.

#### Compare character set

Check this option if you want to compare the character sets of tables.

#### **Compare checks**

Check this option if you want to compare checks.

#### **Compare collation**

Check this option if you want to compare the collations of tables.

#### **Compare definers**

Check this option if you want to compare the definers.

#### **Compare events**

Check this option if you want to compare events.

#### **Compare excludes**

Check this option if you want to compare table excludes.

#### Compare foreign keys

Check this option if you want to compare table foreign keys.

#### **Compare functions**

Check this option if you want to compare functions.

#### Compare identity last value

Check this option if you want to compare the identity last values of tables.

#### Compare indexes

Check this option if you want to compare indexes.

#### **Compare owners**

Check this option if you want to compare the owners of the objects.

#### **Compare partitions**

Check this option if you want to compare table partitions.

#### Compare primary keys

Check this option if you want to compare table primary keys.

#### **Compare rules**

Check this option if you want to compare rules.

#### **Compare sequences**

Check this option if you want to compare sequences.

#### **Compare storage**

Check this option if you want to compare storage.

#### **Compare table options**

Check this option if you want to compare other table options.

#### **Compare tables**

Check this option if you want to compare tables.

#### Compare tablespace and physical attributes

Check this option if you want to compare tablespace and physical attributes.

#### **Compare triggers**

Check this option if you want to compare triggers.

#### **Compare uniques**

Check this option if you want to compare table uniques.

#### **Compare views**

Check this option if you want to compare views.

#### **Drop with CASCADE**

Check this option if you want to drop the dependent database objects with the CASCADE option.

#### **Identifier Case Sensitivity**

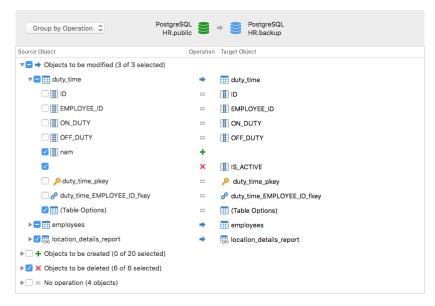

Ignore or consider the case of identifiers when mapping, or use the server default setting.

#### **Start Comparison**

Click the **Compare** button to compare the source and target databases.

## View Structure Comparison Results (Step 2)

After comparing structures, the tree view shows the differences between the source and target databases or schemas. All objects are checked in the tree view by default. Uncheck the objects you do not want to apply to the target. You can expand the table objects to view the detailed structure.

You can choose to group the objects in the tree views by object types or operations by selecting **Group by Object Type** or **Group by Operation**.

| Operation | Description   |  |
|-----------|---|--|
| +         | Object exists in both source and target databases/schemas, but they have different      |  |
|           | definition. The target object will be modified based on the source object.              |  |
| +         | Object does not exist in the target database/schema. It will be created in the target.  |  |
| ×         | Object does not exist in the source database/schema. The target object will be deleted. |  |
| =         | Object exists in both source and target databases/schemas and they have identical       |  |
|           | definition. No operation will be applied.   |  |

When you selected an object in the tree view, the **DDL Comparison** tab shows the DDL statements of that object in the source and the target, and the **Deployment Script** tab shows the detailed SQL statements of the object that will be executed in the target databases.

| uty_time   |
|--|
| duty_time  |
|  |
| ID ID  |
| EMPLOYEE_ID  |
| ON_DUTY  |
| I OFF_DUTY   |
|  |
| IS_ACTIVE  |
| Deployment Script  |
| duty_time  |
| <pre>1 CREATE TABLE "backup"."duty_time" ( 2 "ID" int4 NOT NULL, 3 "EMPLOYEE_ID" float8, 4 "ON_DUTY" timestamp(6), 5 "OFF_DUTY" timestamp(6), 6 "IS_ACTIVE" varchar(255) COLLATE "pg_catalog"." 7 CONSTRAINT "duty_time_pkey" PRIMARY KEY ("ID"), 8 CONSTRAINT "duty_time_DKey" PRIMARY KEY ("ID"), 10 ; 11 </pre> |
|  |

Click the **Deploy** button to show the scripts of all selected objects.

## Edit & Execute Selected Scripts (Step 3)

You can view all scripts that will be executed in the target database in the **Deployment Script** tab.

| Deployment Options Button   | Description   |  |
|-----------------------------|---|--|
| Deployment Options          | Continue on error - Ignore errors that are encountered during the |  |
|                             | execution process if necessary.                                   |  |
| Edit Script                 | Open the Edit Deployment Script window to rearrange the order     |  |
|                             | of the scripts.   |  |
| Copy Script to Clipboard    | Copy all scripts from the Deployment Script tab to the clipboard. |  |
| Open Script in Query Editor | Open a new query window and display the scripts.                  |  |

In the Edit Deployment Script window, use the arrow buttons to move the scripts.

| 0 0 0                 | Structure Synchronization   |   |

| 22                    |   | , |
| Com                   | Cancel OK   |   |
| Save P                | Profile   Deployment Script  Back Recompare Execute   |   |

Then, click the **Execute** button to execute the scripts. The window will display the execution progress, execution time, and success or failure messages.

# Dump & Execute SQL / Script File

The **Dump SQL File**, **Execute SQL File**, **Dump Script File** and **Execute Script File** features allow you to dump your database, schema, tables or collections to a SQL or .js file or execute SQL or .js files in your connection, database or schema.

#### To dump a file

- In the main window, control-click an opened database/schema or control-click the selected tables/collections, and select Dump SQL File or Dump Script File -> Structure Only or Structure + Data.
- 2. Browse the save location and enter a file name.
- 3. Click Save.

#### To execute a file

- In the main window, control-click an opened connection, database or schema and select Execute SQL File or Execute Script File.
- 2. Browse your SQL or .js file, choose the encoding of the file and enable appropriate options.

| Option                  | Description  |  |
|-------------------------|--|--|
| Continue on error       | Ignore errors that are encountered during the execution process. |  |
| Run multiple queries in | Execute multiple SQL statements at once, which will make the     |  |

| each execution     | execution process faster. |
|--------------------|---------------------------|
| SET AUTOCOMMIT=0 / | Disable auto commit mode. |
| No Auto Commit     |                           |

3. Click Start.

**Hint:** You can drag and drop a .sql or .js file to an opened connection, database or schema in the Navigation pane. Navicat will pop up the Execute SQL File or Execute Script File window automatically.

# MongoImport & MongoExport

## About MongoImport & MongoExport

MongoDB provides two utilities for import and export data: MongoImport and MongoExport. You can import or export the data according to the specified conditions.

## MongoImport

MongoImport allows you to import data from a JSON, CSV or TSV file into MongoDB database.

Note: You must have mongoimport executable for this feature to work.

#### To import a file

- 1. In Navicat main window, control-click your database and select MongoImport.
- 2. In the **General** and **Advanced** tabs, select the input file path, the target collection, the file type, and the appropriate import options.
- 3. Click the **Start** button to begin the import process. The **Message Log** tab will display the import progress, execution time, and success or failure messages.

You can save your settings as a profile for future use or setting automation tasks. To open a saved profile, click the **Load Profile** button and select a profile from the list.

Hint: Profiles are saved under the default path, e.g. ~/Library/Application Support/PremiumSoft CyberTech/Navicat CC/Common/Profiles

## MongoExport

MongoExport allows you to export MongoDB collections to a JSON or CSV file.

Note: You must have mongoexport executable for this feature to work.

#### To export collections

1. In Navicat main window, control-click your database and select MongoExport.

- 2. In the **General** and **Advanced** tabs, select the export file path, the source collection, the file type, and the appropriate export options.
- 3. Click the **Start** button to begin the export process. The **Message Log** tab will display the export progress, execution time, and success or failure messages.

You can save your settings as a profile for future use or setting automation tasks. To open a saved profile, click the **Load Profile** button and select a profile from the list.

Hint: Profiles are saved under the default path, e.g. ~/Library/Application Support/PremiumSoft CyberTech/Navicat CC/Common/Profiles

# Chapter 11 - Charts (Available only in Navicat Premium and Enterprise Edition)

# About Charts

Charts feature allows you to create visual representations of your database data. In the main window, click Charts to open the workspace object list.

Note: Available only for MySQL, Oracle, PostgreSQL, SQLite, SQL Server and MariaDB.

Some of key features are listed here:

- Support 20 chart types.
- Customize multiple pages dashboard.
- Visualize live data.
- Add interactive controls.

**Hint:** Workspace files (.ncharts) are saved under the default path, e.g. ~/Library/Application Support/PremiumSoft CyberTech/Navicat CC/Navicat Premium/Profiles. To open the folder, control-click a workspace file and select **Show in Finder**.

#### Open an external workspace file

- 1. Control-click anywhere in the Objects tab and select **Open External Workspace** from the pop-up menu.
- 2. Browse the file and click **Open** in the dialog window.

#### Save an opened external file as a Navicat workspace

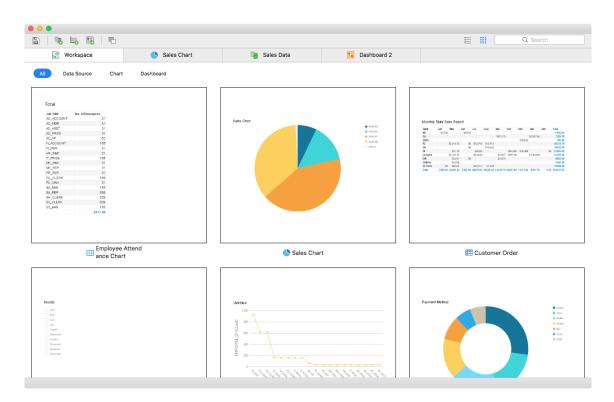

- 1. In Workspace Designer, choose File -> Save to Navicat.
- 2. Enter the workspace name and choose the save location.
- 3. Click OK.

#### Save a Navicat workspace as an external file

- 1. In Workspace Designer, choose File -> Save As External File.
- 2. Choose the save path and enter the file name.
- 3. Click Save.

# Workspace

A workspace is the place that comprises dashboards, charts and data sources. You can create multiple dashboards, charts and data sources in a workspace.

#### **Customize Workspace**

You can view and sort items in the workspace. To change from one view to another, click the **List** or **# Grid** button at the bottom of the window. Alternatively, choose **View** -> **List** or **Grid**.

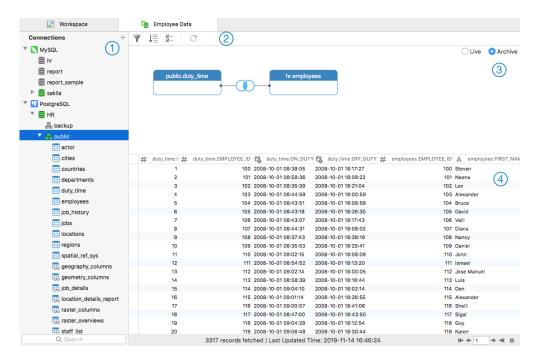

List View displays additional information about each item. You can sort items in List View, click the column header by which you want to sort the items.

Grid View displays your items as a grid of thumbnail images. You can filter the items by clicking a category (All, Data Source, Chart, Dashboard) in this view.

# **Data Source**

## **About Data Source**

Data sources reference tables in your connections and can select data from tables on different server types. The fields in the dataset can be used to construct a chart. When building a chart, you will need to specify the data source that the chart uses.

## 1 Connection Pane

The Connection pane is the basic way to navigate with connections, databases, tables, queries. If the Connection pane is hidden, choose **View** -> **Show Connection** from the menu bar.

#### 2 Data Source Toolbar

The Data Source Toolbar provides controls that you can use to manipulate the data.

#### ③ Design Pane

The Design pane allows you to build the data source visually.

Navicat provides two modes for connecting your data: Live and Achieve.

**Live** mode retrieves data from your servers whenever the data source is being used / loaded. It offers the convenience of real-time updates, with any changes in the underlying data reflected.

**Archive** mode retrieves data from your servers during the data source creation, and stored the retrieved data in the workspace for later use by building charts.

#### 4 Preview Pane

The Preview pane displays the data of the data source.

## **Create Data Source**

The essential steps to create a data source are:

- 1. In the Workspace window, click 👼.
- 2. Enter the name of the data source and select the desired connections or existing data sources.

- 3. Click OK.
- 4. A tab will open for you to edit the data source.
- 5. Drag and drop tables / queries from the Connections pane to the Design pane.
- 6. Drag and drop a node to another to create the join.
- 7. Configure the join type and join fields if necessary.

| public.duty_time | hr.employees           |           |                        |
|------------------|------------------------|-----------|------------------------|
|                  |                        | Join Edit |                        |
|                  | duty_t                 | ime 🚺 🗸   | employees              |
|                  | Left field             | Operator  | Right field            |
|                  | .duty_time.EMPLOYEE_ID |           | .employees.EMPLOYEE_ID |
|                  | + - * *                |           | Cancel OK              |

**Hint:** After creating the join, you can change the join settings at any time by clicking the join icon on the connector.

- 8. Choose Live mode or Archive mode.
- 9. Click Apply & Refresh Data to view the data.

#### Add Query to Data Source

You can save query results for creating a new dataset.

#### To create a new query

- 1. On the Connections pane, double-click New Query.
- 2. Enter the name of the query and write the statement in SQL Editor. You can also use Query Builder to build the query visually.

#### To add an existing query

- 1. On the Connections pane, double-click **New Query**.
- 2. Click Existing Queries.
- 3. Drag and drop a query from the left pane to the editor.

## Filter / Sort / Project Data

If your data source has many data or fields, you may find it easier to limit the data or fields to just the ones you want so you can simplify the data selections.

#### **Filter Data**

Filter pane allows you to facilitate creating and applying filter criteria that you specify for the data. Click **Y** from the toolbar to activate the Filter pane.

1. To add a new condition to the criteria, just simply click 📑. If you want to add a condition with parentheses, click 💁.

Hint: To add parentheses to existing conditions, simply control-click on the selected conditions and select Group with Bracket. To remove the parentheses, control-click a bracket and select Delete Bracket or Delete Bracket and Conditions.

- 2. Click on the field name (next to the checkbox) and choose a field from the list.
- 3. Click on the operator (next to the field name) and choose a filter operator.

| Filter Operator     | Operator Description                                  |
|---------------------|---|
| =                   | The field is equal to 'value'.                        |
| !=                  | The field is not equal to 'value'.                    |
| <                   | The field is less than 'value'.                       |
| <=                  | The field is less than or equal to 'value'.           |
| >                   | The field is greater than 'value'.                    |
| >=                  | The field is greater than or equal to 'value'.        |
| contains            | The field contains 'value'.                           |
| does not contain    | The field does not contain 'value'.                   |
| begin with          | The field starts with 'value'.                        |
| does not begin with | The field does not start with 'value'.                |
| end with            | The field ends with 'value'.                          |
| does not end with   | The field does not end with 'value'.                  |
| is null             | The field is NULL.                                    |
| is not null         | The field is NOT NULL.                                |
| is empty            | The field is empty.                                   |
| is not empty        | The field is not empty.                               |
| is between          | The field is between 'value1' and 'value2'.           |
| is not between      | The field is not between 'value1' and 'value2'.       |
| is in list          | The field is in the list of ('value1','value2',).     |
| is not in list      | The field is not in the list of ('value1','value2',). |

4. Click on <?> to activate the appropriate editor and enter the criteria values. The editor used in the criteria values box is determined by the data type assigned to the corresponding field.

- 5. Click on the logical operator (next to the criteria values) to choose and or or.
- 6. Repeat step 1-5 to add another new condition.
- 7. Click Apply & Refresh Data to see the result of the filtering you made.

Hint: If you want to reverse the meaning of the conditions, control-click the selected conditions and select **Toggle Negator**.

#### Sort Data

Navicat offers the ability to sort and order data. Click  $\downarrow \equiv$  from the toolbar to activate the Sort pane.

- 1. To add a new criteria, just simply click 💻.
- 2. Click on the field name (next to the checkbox) and choose a field from the list.
- 3. Click on the sorting order to choose ASC or DESC.
- 4. Repeat step 1-3 to add another new criteria.
- 5. Click Apply & Refresh Data to see the result of the sorting you made.

#### **Project Data**

You can choose which fields to include or exclude in the data source. Click  $\mathbb{B}^-$  from the toolbar to activate the Projection pane.

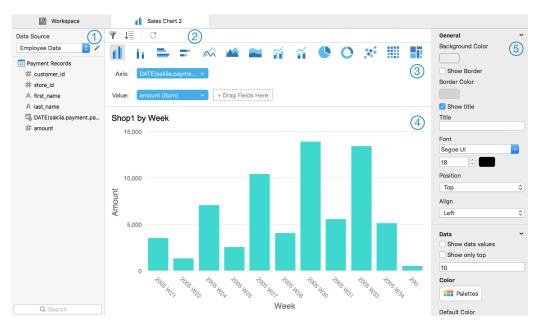

- 1. Choose to **Include** or **Exclude** fields.
- 2. To add a new criteria, just simply click 💻
- 3. Click on the field name (next to the checkbox) and choose a field from the list.
- 4. Repeat step 2-3 to add another new criteria.
- 5. Click **Apply & Refresh Data** to see the result of the projection you made.

# Chart

## About Chart

A chart provides visual representations of the data in your data source. It maps to a single data source, and can display correlations between several fields in the data. You can even make the chart interactive by adding a control chart.

Note: You must add a data source before you can begin building charts.

#### 1 Data Source Pane

The Data Source pane is the basic way to navigate with the data sources. If the Data Source pane is hidden, choose **View** -> **Show Data Source** from the menu bar.

#### 2 Chart Toolbar

The Chart Toolbar provides controls that you can use to manipulate the data.

## ③ Metric Pane

The Metric pane allows you to choose the chart type and add fields to the shelves from the Data Source Pane. If the Metric pane is hidden, choose **View** -> **Show Metric** from the menu bar.

#### 4 Preview Pane

The Preview pane displays the chart.

#### 5 Properties Pane

The Properties pane includes the basic layout settings, data format settings and so on. The properties vary with the type of the chart. If the Properties pane is hidden, choose **View** -> **Show Properties** from the menu bar.

## **Build Chart**

The essential steps to create a chart are:

- 1. In the Workspace window, click 🖳
- 2. Select the data source and enter the name of the chart.
- 3. A tab will open for you to edit the chart.
- 4. Choose the Chart Type on the middle pane.

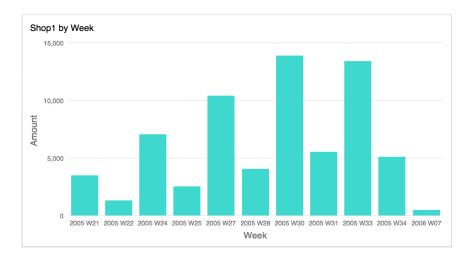

#### d. h. -1 123 O $\infty$ ĩ ĩ

Hint: The type of chart you will use is normally determined by the type of the data.

- 5. Drag fields to the corresponding shelf in the Metric pane to set axis, values, etc.
- 6. Select the properties on the right pane which can be further customized for your chart.

Hint: Each chart type has different properties.

7. The chart shows on the Preview pane.

#### **Set Field Alias**

You can create aliases for fields so that their labels appear differently in the chart.

- 1. Click the down arrow in the field box.
- 2. Select Set Alias.

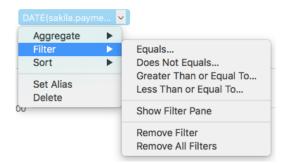

3. Enter the alias name.

## Filter / Sort Data

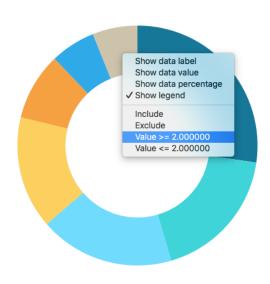

#### **Filter Data**

You can filter the data in 3 ways:

• Click the down arrow in the field box and select Filter.

- Use the Filter pane.
- Control-click a series / data points on the chart.

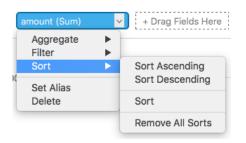

Hint: If you want to clear the filter, you need to use the Filter pane.

#### Sort Data

You can sort the data in 2 ways:

• Click the down arrow in the field box and select Sort.

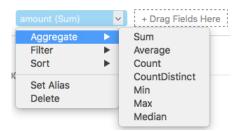

• Use the Sort pane.

## Apply Aggregate Function

Aggregate functions allow you to summarize or change the granularity of your data.

1. Click the down arrow in the field box.

2. Select **Aggregate** and choose a aggregate function.

| Function  | Description  |
|---|--|
| Number  |  |
| Sum   | Return the sum of all values. Null values are ignored.               |
| Average   | Return the average of all the values. Null values are ignored.       |
| Count   | Return the number of items. Null values are not counted.             |
| Count(Distinct)                                 | Return the number of distinct items. Null values are not counted.    |
| Min   | Return the minimum value across all records. Null values are         |
|   | ignored.   |
| Мах   | Return the maximum value across all records. Null values are         |
|   | ignored.   |
| Median  | Return the median value across all records. Null values are ignored. |
| DateTime  |  |
| Count   | Return the number of items. Null values are not counted.             |
| Count(Distinct)                                 | Return the number of distinct items. Null values are not counted.    |
| Year  | Return the year of the date (0000-9999).                             |
| Quarter Return the quarter of the year (Q1-Q4). |  |
| Month Return the month of the date (01-12).     |  |
| Week  | Return the week of the year (W01-W52, start of week is Sunday).      |
| Day   | Return the day of the date (01-31).                                  |
| Hour  | Return the hour of the time (00-23).                                 |
| Minute  | Return the minute of the time (00-59).                               |
| Second  | Return the second of the time (00-59).                               |
| String  |  |
| First   | Return the value of the first record.                                |
| Last  | Return the value of the last record.                                 |
| Count   | Return the number of items. Null values are not counted.             |
| Count(Distinct)                                 | Return the number of distinct items. Null values are not counted.    |

# Chart Types

## About Chart Types

Navicat provides a variety of different chart types so data can be displayed in a meaningful way.

Here is a complete list of available chart types:

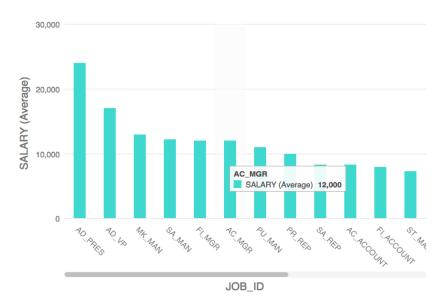

- Vertical Bar Chart
- Vertical Stacked Bar Chart
- Horizontal Bar Chart
- Horizontal Stacked Bar Chart
- Line Chart
- Area Chart
- Stacked Area Chart
- Bar and Line Chart
- Stacked Bar and Line Chart
- Pie Chart
- Donut Chart
- Scatter Chart
- Heatmap
- Treemap
- Value
- Trend
- KPI
- Table
- Pivot Table
- Control

## **Bar Chart**

A bar chart provides high-level overviews of data trends by comparing values within a specific category.

- Vertical Bar Chart
- Vertical Stacked Bar Chart
- Horizontal Bar Chart

#### • Horizontal Stacked Bar Chart

## **Chart Properties**

Once you have selected a chart type, you can customize the chart by changing its properties:

| Option                | Description  |
|-----------------------|--|
| General               |  |
| Background Color      | Set the background color of the chart area.                            |
| Show Border           | Display the outer chart border.  |
| Border Color          | Set the color of the outer chart border.                               |
| Show title            | Display the chart's main title.  |
| Title                 | Specify the title of the chart.  |
| Title Font            | Set the font style of the title.                                       |
| Position              | Set the position of the title.   |
| Align                 | Set the horizontal alignment of the title.                             |
| Data                  |  |
| Show data values      | Display the values of the data series.                                 |
| Use 100% stacked      | Use 100% stacked bars to show values for hierarchical data. (Each bar  |
|                       | height is 100%, and the colored bar segments represent the components' |
|                       | relative contributions to the total bar.)                              |
| Show data percentages | Display the data percentages of the bars.                              |
| Data Label Color      | Set the color of the data labels on the bars.                          |
| Value Option          | Select the value that will be displayed on the chart.                  |
| Show only top #       | Only the top # data are displayed.                                     |
| Color                 | Set the color palette of the data series.                              |
| All Data Colors       | Allow setting the color for each series.                               |
| Data Formats - Number |  |
| Prefix                | Add prefix characters to all the numeric data on the chart.            |
| Unit                  | Choose the unit to shorten the numeric data.                           |

| Suffix                   | Specify the suffix to label the customized unit.   |
|--------------------------|--|
| Divider                  | Specify the divider for the customized unit.   |
| Thousand Separator       | Choose the thousands separator for numeric data.   |
| Decimal Separator        | Choose the decimal separator for numeric data.   |
| Decimal Places           | Specify decimal places for numeric data.   |
| Negatives                | Choose the format negative numbers are displayed.  |
| Data Formats - DateTime  | )<br>}   |
| Date / Time              | Choose the date and time format of the data.   |
| Custom                   | Customize the date and time format.  |
| X-Axis                   |  |
| Show X-Axis title        | Display the title of X-Axis.   |
| X-Axis Title             | Specify the title of X-Axis.   |
| Font                     | Set the font style of X-Axis title.  |
| Show title at the end of | Display the title at the end of X-Axis.  |
| axis                     |  |
| Continuous               | Use a continuous axis. The data series are positioned according to their                 |
|                          | domain value.  |
| Show X-Axis labels       | Display labels on X-Axis.  |
| Show X-Axis              | Display X-Axis line.   |
| X-Axis Color             | Set the color of X-Axis line.  |
| Y-Axis                   |  |
| Show Y-Axis title        | Display the title of Y-Axis.   |
| Y-Axis title             | Specify the title of Y-Axis.   |
| Font                     | Set the font style of Y-Axis title.  |
| Show title at the end of | Display the title at the end of Y-Axis.  |
| axis                     |  |
| Show Y-Axis labels       | Display labels on Y-Axis.  |
| Show Y-Axis              | Display Y-Axis line.   |
| Y-Axis Color             | Set the color of Y-Axis line.  |
| Show grid line           | Display the grid line of Y-Axis.   |
| Use custom range         | Set the range of the grid lines. Enter values in <b>Start</b> and <b>End</b> . The graph |
|                          | drawing beyond this range will be clipped off.   |
| Use Custom Interval      | Change the Interval on Y-Axis.   |
| Tick Interval            | Set the interval of the tick marks in axis units.  |
| Legend                   |  |
| Show legend              | Display the legend container.  |
| Position                 | Set the position for the legend.   |
| Align                    | Set the horizontal alignment of the legend.  |

## Line / Area Chart

A line or area chart displays information as a series of data points connected by straight line segments.

- Line Chart
- Area Chart
- Stacked Area Chart

#### **Chart Properties**

Once you have selected a chart type, you can customize the chart by changing its properties:

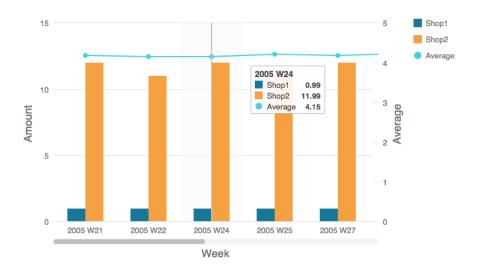

| Option                | Description  |
|-----------------------|--|
| General               |  |
| Background Color      | Set the background color of the chart area.                            |
| Show Border           | Display the outer chart border.  |
| Border Color          | Set the color of the outer chart border.                               |
| Show title            | Display the chart's main title.  |
| Title                 | Specify the title of the chart.  |
| Title Font            | Set the font style of the title.                                       |
| Position              | Set the position of the title.   |
| Align                 | Set the horizontal alignment of the title.                             |
| Data                  |  |
| Show Values           | Display the values of the data points.                                 |
| Show Area Values      | Display the values of the data points.                                 |
| Value Option          | Select the value that will be displayed on the chart.                  |
| Show markers          | Display the marker points on the line / area.                          |
| Use 100% stacked      | Use 100% stacked areas to show values for hierarchical data. (The area |
|                       | height is 100%, and the colored area segments represent the            |
|                       | components' relative contributions to the total area.)                 |
| Show only top #       | Only the top # data are displayed.                                     |
| Color                 | Set the color palette of the data series.                              |
| Data Formats - Number |  |

| Prefix                   | Add prefix characters to all the numeric data on the chart.                              |
|--------------------------|--|
| Unit                     | Choose the unit to shorten the numeric data.   |
| Suffix                   | Specify the suffix to label the customized unit.   |
| Divider                  | Specify the divider for the customized unit.   |
| Thousand Separator       | Choose the thousands separator for numeric data.   |
| Decimal Separator        | Choose the decimal separator for numeric data.   |
| Decimal Places           | Specify decimal places for numeric data.   |
| Negatives                | Choose the format negative numbers are displayed.  |
| Data Formats - DateTime  |  |
| Date / Time              | Choose the date and time format of the data.   |
| Custom                   | Customize the date and time format.  |
| X-Axis                   |  |
| Show X-Axis title        | Display the title of X-Axis.   |
| X-Axis Title             | Specify the title of X-Axis.   |
| Font                     | Set the font style of X-Axis title.  |
| Show title at the end of | Display the title at the end of X-Axis.  |
| axis                     |  |
| Continuous               | Use a continuous axis. The data series are positioned according to their                 |
|                          | domain value.  |
| Show X-Axis labels       | Display labels on X-Axis.  |
| Show X-Axis              | Display X-Axis line.   |
| X-Axis Color             | Set the color of X-Axis line.  |
| Y-Axis                   |  |
| Show Y-Axis title        | Display the title of Y-Axis.   |
| Y-Axis title             | Specify the title of Y-Axis.   |
| Font                     | Set the font style of Y-Axis title.  |
| Show title at the end of | Display the title at the end of Y-Axis.  |
| axis                     |  |
| Show Y-Axis labels       | Display labels on Y-Axis.  |
| Show Y-Axis              | Display Y-Axis line.   |
| Y-Axis Color             | Set the color of Y-Axis line.  |
| Show grid line           | Display the grid line of Y-Axis.   |
| Use custom range         | Set the range of the grid lines. Enter values in <b>Start</b> and <b>End</b> . The graph |
|                          | drawing beyond this range will be clipped off.   |
| Use Custom Interval      | Change the Interval on Y-Axis.   |
| Tick Interval            | Set the interval of the tick marks in axis units.  |
| Legend                   | ·  |
| Show legend              | Display the legend container.  |
| Position                 | Set the position for the legend.   |
| Align                    | Set the horizontal alignment of the legend.  |

## **Combination Chart**

Mixing bar and line chart in the same visual is a good way to emphasize the difference between series while still maintaining their relationship.

- Bar and Line Chart
- Stacked Bar and Line Chart

#### **Chart Properties**

Once you have selected a chart type, you can customize the chart by changing its properties:

| Option               | Description   |
|----------------------|---|
| General              |   |
| Background Color     | Set the background color of the chart area.                           |
| Show Border          | Display the outer chart border.                                       |
| Border Color         | Set the color of the outer chart border.                              |
| Show title           | Display the chart's main title.                                       |
| Title                | Specify the title of the chart.                                       |
| Title Font           | Set the font style of the title.                                      |
| Position             | Set the position of the title.  |
| Align                | Set the horizontal alignment of the title.                            |
| Data                 |   |
| Show bar data values | Display the values of the data series for the bars.                   |
| Use 100% stacked bar | Use 100% stacked bars to show values for hierarchical data. (Each bar |
|                      | height is 100%, and the colored bar segments represent the            |
|                      | components' relative contributions to the total bar.)                 |
| Show bar data        | Display the data percentages of the bars.                             |
| percentages          |   |
| Bar Data Label Color | Set the color of the data labels on the bars.                         |
| Show Line Values     | Display the data value for the line.                                  |

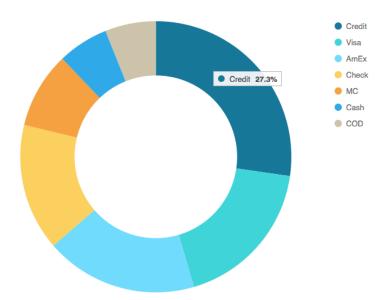

| Value Option              | Select the values that will be displayed on the chart.                   |
|---------------------------|--|
| Show line markers         | Display the marker points on the line.                                   |
| Show only top #           | Only the top # data are displayed.                                       |
| Color                     | Set the color palette of the data series.                                |
| All Bar Data Colors       | Allow setting the color for each series.                                 |
| Data Formats - Number     | ·  |
| Prefix                    | Add prefix characters to all the numeric data on the chart.              |
| Unit                      | Choose the unit to shorten the numeric data.                             |
| Suffix                    | Specify the suffix to label the customized unit.                         |
| Divider                   | Specify the divider for the customized unit.                             |
| Thousand Separator        | Choose the thousands separator for numeric data.                         |
| Decimal Separator         | Choose the decimal separator for numeric data.                           |
| Decimal Places            | Specify decimal places for numeric data.                                 |
| Negatives                 | Choose the format negative numbers are displayed.                        |
| Data Formats - DateTime   |  |
| Date / Time               | Choose the date and time format of the data.                             |
| Custom                    | Customize the date and time format.                                      |
| X-Axis                    |  |
| Show X-Axis title         | Display the title of X-Axis.   |
| X-Axis Title              | Specify the title of X-Axis.   |
| Font                      | Set the font style of X-Axis title.                                      |
| Show title at the end of  | Display the title at the end of X-Axis.                                  |
| axis                      |  |
| Continuous                | Use a continuous axis. The data series are positioned according to their |
|                           | domain value.  |
| Show X-Axis labels        | Display labels on X-Axis.  |
| Show X-Axis               | Display X-Axis line.   |

| Thousand Separator      | Choose the thousands separator for numeric data.            |  |
| Decimal Separator       | Choose the decimal separator for numeric data.              |  |
| Decimal Places          | Specify decimal places for numeric data.                    |  |
| Negatives               | Choose the format negative numbers are displayed.           |  |
| Data Formats - DateTime |   |  |

| Date / Time              | Choose the date and time format of the data.   |
|--------------------------|--|
| Custom                   | Customize the date and time format.  |
| X-Axis                   |  |
| Show X-Axis title        | Display the title of X-Axis.   |
| X-Axis Title             | Specify the title of X-Axis.   |
| Font                     | Set the font style of X-Axis title.  |
| Show title at the end of | Display the title at the end of X-Axis.  |
| axis                     |  |
| Continuous               | Use a continuous axis. The data series are positioned according to their                 |
|                          | domain value.  |
| Show X-Axis labels       | Display labels on X-Axis.  |
| Show X-Axis              | Display X-Axis line.   |
| X-Axis Color             | Set the color of X-Axis line.  |
| Show grid line           | Display the grid line of X-Axis.   |
| Use custom range         | Set the range of the grid lines. Enter values in <b>Start</b> and <b>End</b> . The graph |
|                          | drawing beyond this range will be clipped off.   |
| Use Custom Interval      | Change the Interval on X-Axis.   |
| Tick Interval            | Set the interval of the tick marks in axis units.  |
| Y-Axis                   |  |
| Show Y-Axis title        | Display the title of Y-Axis.   |
| Y-Axis title             | Specify the title of Y-Axis.   |
| Font                     | Set the font style of Y-Axis title.  |
| Show title at the end of | Display the title at the end of Y-Axis.  |
| axis                     |  |
| Continuous               | Use a continuous axis. The data series are positioned according to their                 |
|                          | domain value.  |
| Show Y-Axis labels       | Display labels on Y-Axis.  |
| Show Y-Axis              | Display Y-Axis line.   |
| Y-Axis Color             | Set the color of Y-Axis line.  |
| Show grid line           | Display the grid line of Y-Axis.   |
| Use custom range         | Set the range of the grid lines. Enter values in Start and End. The graph                |
|                          | drawing beyond this range will be clipped off.   |
| Use Custom Interval      | Change the Interval on Y-Axis.   |
| Tick Interval            | Set the interval of the tick marks in axis units.  |
| Legend                   |  |
| Show legend              | Display the legend container.  |
| Position                 | Set the position for the legend.   |
| Align                    | Set the horizontal alignment of the legend.  |

# Heatmap

A heatmap represents data in a tabular format as a range of color. A more intense color represents a larger aggregated value for a particular data point.

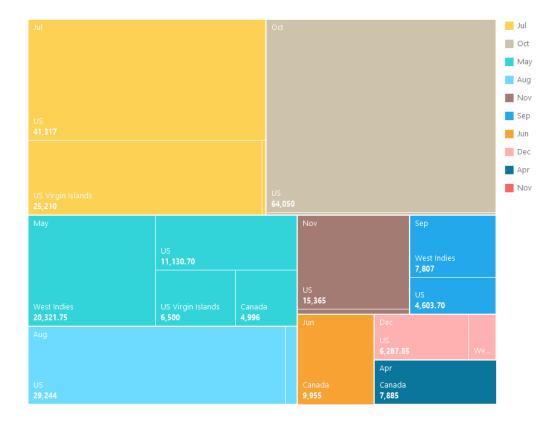

#### **Chart Properties**

| Option                | Description   |
|-----------------------|---|
| General               |   |
| Background Color      | Set the background color of the chart area.                 |
| Show Border           | Display the outer chart border.                             |
| Border Color          | Set the color of the outer chart border.                    |
| Show title            | Display the chart's main title.                             |
| Title                 | Specify the title of the chart.                             |
| Title Font            | Set the font style of the title.                            |
| Position              | Set the position of the title.                              |
| Align                 | Set the horizontal alignment of the title.                  |
| Data                  |   |
| Show data values      | Display the values of the data series.                      |
| Data Label Color      | Set the color of the data label.                            |
| Diverging             | Use diverging color scale.                                  |
| Min Color             | Set the color of the minimum value in the colormap.         |
| Center Color          | Set the color of the value at which to center the colormap. |
| Max Color             | Set the color of the maximum value in the colormap.         |
| Min Value             | Specify the minimum value.                                  |
| Max Value             | Specify the maximum value.                                  |
| Data Formats - Number |   |

| Prefix                  | Add prefix characters to all the numeric data on the chart. |
|-------------------------|---|
| Unit                    | Choose the unit to shorten the numeric data.                |
| Suffix                  | Specify the suffix to label the customized unit.            |
| Divider                 | Specify the divider for the customized unit.                |
| Thousand Separator      | Choose the thousands separator for numeric data.            |
| Decimal Separator       | Choose the decimal separator for numeric data.              |
| Decimal Places          | Specify decimal places for numeric data.                    |
| Negatives               | Choose the format negative numbers are displayed.           |
| Data Formats - DateTime |   |
| Date / Time             | Choose the date and time format of the data.                |
| Custom                  | Customize the date and time format.                         |
| Column                  |   |
| Show column title       | Display the title of the column.                            |
| Column Title            | Specify the title of the column.                            |
| Column Title Font       | Set the font style of the column title.                     |
| Show column label       | Display the column label.                                   |
| Column Label Color      | Set the color of the column label.                          |
| Row                     |   |
| Show row title          | Display the title of the row.                               |
| Row Title               | Specify the title of the row.                               |
| Row Title Font          | Set the font style of the row title.                        |
| Show row label          | Display the row label.                                      |
| Row Label Color         | Set the color of the row label.                             |
| Legend                  |   |
| Show legend             | Display the legend container.                               |
| Position                | Set the position for the legend.                            |
|                         |   |

# Treemap

A treemap is an alternative way of visualizing the hierarchical structure while also displaying quantities for each category via area size.

#### **Chart Properties**

| Option                | Description                                      |
|-----------------------|--|
| General               |  |
| Background Color      | Set the background color of the chart area.      |
| Show Border           | Display the outer chart border.                  |
| Border Color          | Set the color of the outer chart border.         |
| Show title            | Display the chart's main title.                  |
| Title                 | Specify the title of the chart.                  |
| Title Font            | Set the font style of the title.                 |
| Position              | Set the position of the title.                   |
| Align                 | Set the horizontal alignment of the title.       |
| Data                  |  |
| Show data point name  | Display the names of the data points.            |
| Show data values      | Display the values of the data points.           |
| Show data percentages | Display the data percentages of the data points. |
| Data Label Color      | Set the color of the data label.                 |
| Color                 | Set the color palette of the data points.        |
| Legend                |  |
| Show legend           | Display the legend container.                    |
| Position              | Set the position for the legend.                 |
| Align                 | Set the horizontal alignment of the legend.      |
| Data Formats - Number |  |

| Prefix                  | Add prefix characters to all the numeric data on the chart. |
|-------------------------|---|
| Unit                    | Choose the unit to shorten the numeric data.                |
| Suffix                  | Specify the suffix to label the customized unit.            |
| Divider                 | Specify the divider for the customized unit.                |
| Thousand Separator      | Choose the thousands separator for numeric data.            |
| Decimal Separator       | Choose the decimal separator for numeric data.              |
| Decimal Places          | Specify decimal places for numeric data.                    |
| Negatives               | Choose the format negative numbers are displayed.           |
| Data Formats - DateTime |   |
| Date / Time             | Choose the date and time format of the data.                |
| Custom                  | Customize the date and time format.                         |

# Value

A value displays a single aggregated value from a data field, e.g. total.

Total

# \$259,619.25

## **Chart Properties**

| Option                | Description   |
|-----------------------|---|
| General               |   |
| Background Color      | Set the background color of the chart area.                 |
| Show Border           | Display the outer chart border.                             |
| Border Color          | Set the color of the outer chart border.                    |
| Show title            | Display the chart's main title.                             |
| Title                 | Specify the title of the chart.                             |
| Title Font            | Set the font style of the title.                            |
| Position              | Set the position of the title.                              |
| Align                 | Set the horizontal alignment of the title.                  |
| Data                  |   |
| Data Label Font       | Set the font style of the data label.                       |
| Data Formats - Number |   |
| Prefix                | Add prefix characters to all the numeric data on the chart. |
| Unit                  | Choose the unit to shorten the numeric data.                |
| Suffix                | Specify the suffix to label the customized unit.            |
| Divider               | Specify the divider for the customized unit.                |
| Thousand Separator    | Choose the thousands separator for numeric data.            |
| Decimal Separator     | Choose the decimal separator for numeric data.              |

| Decimal Places          | Specify decimal places for numeric data.          |
|-------------------------|---|
| Negatives               | Choose the format negative numbers are displayed. |
| Data Formats - DateTime |   |
| Date / Time             | Choose the date and time format of the data.      |
| Custom                  | Customize the date and time format.               |

# Trend

A trend displays that the current value is trending up or down compared to the previous value, and the percentage change.

#### **Chart Properties**

| Option                | Description   |
|-----------------------|---|
| General               |   |
| Background Color      | Set the background color of the chart area.                         |
| Show Border           | Display the outer chart border.                                     |
| Border Color          | Set the color of the outer chart border.                            |
| Show title            | Display the chart's main title.                                     |
| Title                 | Specify the title of the chart.                                     |
| Title Font            | Set the font style of the title.                                    |
| Position              | Set the position of the title.                                      |
| Align                 | Set the horizontal alignment of the title.                          |
| Data                  |   |
| Show previous value   | Display the previous value.   |
| Show difference       | Display the Value / Percentage difference between the current value |
|                       | and the previous value.   |
| Show Indicator        | Display the up or down indicator.                                   |
| Main Label Font       | Set the font style of the main label.                               |
| Previous Value Color  | Set the color of the previous value.                                |
| Target Met Color      | Set the color of the indicator and the percentage when the value is |
|                       | trending up.  |
| Target Missed Color   | Set the color of the indicator and the percentage when the value is |
|                       | trending down.  |
| Data Formats - Number |   |
| Prefix                | Add prefix characters to all the numeric data on the chart.         |
| Unit                  | Choose the unit to shorten the numeric data.                        |

| Suffix             | Specify the suffix to label the customized unit.  |  |
|--------------------|---|--|
| Divider            | Specify the divider for the customized unit.      |  |
| Thousand Separator | Choose the thousands separator for numeric data.  |  |
| Decimal Separator  | Choose the decimal separator for numeric data.    |  |
| Decimal Places     | Specify decimal places for numeric data.          |  |
| Negatives          | Choose the format negative numbers are displayed. |  |

# KPI

A KPI displays a comparison between a key value and its target value with a progress bar.

## **Chart Properties**

| Option               | Description   |  |  |
|----------------------|---|--|--|
| General              |   |  |  |
| Background Color     | Set the background color of the chart area.                             |  |  |
| Show Border          | Display the outer chart border.   |  |  |
| Border Color         | Set the color of the outer chart border.                                |  |  |
| Show title           | Display the chart's main title.   |  |  |
| Title                | Specify the title of the chart.   |  |  |
| Title Font           | Set the font style of the title.  |  |  |
| Position             | Set the position of the title.  |  |  |
| Align                | Set the horizontal alignment of the title.                              |  |  |
| Data                 |   |  |  |
| Main Label Displayed | Display the Actual value or the Comparison percentage in the main labor |  |  |
| Main Label Font      | Set the font style of the main label.                                   |  |  |
| Sub Label Color      | Set the color of the sub-label on the bar.                              |  |  |
| Target Caption       | Specify the caption of the target label.                                |  |  |
| Target Label Color   | Set the color of the target label.                                      |  |  |
| Target Met Color     | Set the color of the bar when the value reaches the target.             |  |  |
| Target Missed Color  | Set the color of the bar when value does not reach the target.          |  |  |
| Data Formats - Numbe | r   |  |  |
| Prefix               | Add prefix characters to all the numeric data on the chart.             |  |  |
| Unit                 | Choose the unit to shorten the numeric data.                            |  |  |

| Suffix             | Specify the suffix to label the customized unit.  |  |
|--------------------|---|--|
| Divider            | Specify the divider for the customized unit.      |  |
| Thousand Separator | Choose the thousands separator for numeric data.  |  |
| Decimal Separator  | Choose the decimal separator for numeric data.    |  |
| Decimal Places     | Specify decimal places for numeric data.          |  |
| Negatives          | Choose the format negative numbers are displayed. |  |

# Table

A table represents data in a tabular view and calculates the total at the end of each column.

| Job Title  | No. of Employees |
|------------|------------------|
| AC_ACCOUNT | 31               |
| AC_MGR     | 31               |
| AD_ASST    | 31               |
| AD_PRES    | 31               |
| AD_VP      | 62               |
| FI_ACCOUNT | 155              |
| FI_MGR     | 31               |
| HR_REP     | 31               |
| IT_PROG    | 155              |
| MK_MAN     | 31               |

#### **Chart Properties**

| Option                    | Description                                     |  |  |
|---------------------------|---|--|--|
| General                   |   |  |  |
| Background Color          | Set the background color of the chart area.     |  |  |
| Show Border               | Display the outer chart border.                 |  |  |
| Border Color              | Set the color of the outer chart border.        |  |  |
| Show title                | Display the chart's main title.                 |  |  |
| Title                     | Specify the title of the chart.                 |  |  |
| Title Font                | Set the font style of the title.                |  |  |
| Position                  | Set the position of the title.                  |  |  |
| Align                     | Set the horizontal alignment of the title.      |  |  |
| Data                      |   |  |  |
| Font                      | Set the font style of the field names and data. |  |  |
| Show Alternate Row        | Apply color to alternate rows.                  |  |  |
| Colors                    |   |  |  |
| Show Vertical Grid Line   | Display the vertical grid line.                 |  |  |
| Show Horizontal Grid Line | Display the horizontal grid line.               |  |  |

| Color                   | Set the color palette of the data series.                   |  |  |
|-------------------------|---|--|--|
| Data Formats - Number   |   |  |  |
| Prefix                  | Add prefix characters to all the numeric data on the chart. |  |  |
| Unit                    | Choose the unit to shorten the numeric data.                |  |  |
| Suffix                  | Specify the suffix to label the customized unit.            |  |  |
| Divider                 | Specify the divider for the customized unit.                |  |  |
| Thousand Separator      | Choose the thousands separator for numeric data.            |  |  |
| Decimal Separator       | Choose the decimal separator for numeric data.              |  |  |
| Decimal Places          | Specify decimal places for numeric data.                    |  |  |
| Negatives               | Choose the format negative numbers are displayed.           |  |  |
| Data Formats - DateTime |   |  |  |
| Date / Time             | Choose the date and time format of the data.                |  |  |
| Custom                  | Customize the date and time format.                         |  |  |
| Total                   |   |  |  |
| Show Total              | Display totals in the last row of the table.                |  |  |
| Total Color             | Set the color of the total values.                          |  |  |

# **Pivot Table**

A pivot table shows measure values for the intersection of two dimensions and represents data in a tabular view.

#### Monthly State Sales Report

| State     | Apr     | May        | Jun     | Jul      | Aug      | Sep      | Oct      | Total     |
|-----------|---------|------------|---------|----------|----------|----------|----------|-----------|
| BC        | \$7,885 |            | \$9,955 |          |          |          |          | 17840.00  |

## **Chart Properties**

| Option           | Description                                 |  |  |
|------------------|---|--|--|
| General          |   |  |  |
| Background Color | Set the background color of the chart area. |  |  |
| Show Border      | Display the outer chart border.             |  |  |
| Border Color     | Set the color of the outer chart border.    |  |  |
| Show title       | Display the chart's main title.             |  |  |
| Title            | Specify the title of the chart.             |  |  |
| Title Font       | Set the font style of the title.            |  |  |
| Position         | Set the position of the title.              |  |  |

| Align                     | Set the horizontal alignment of the title.                                |  |  |
|---------------------------|---|--|--|
| Data                      |   |  |  |
| Font                      | Set the font style of the field names and data.                           |  |  |
| Show Alternate Row        | Apply color to alternate rows.  |  |  |
| Colors                    |   |  |  |
| Show Vertical Grid Line   | Display the vertical grid line.   |  |  |
| Show Horizontal Grid Line | Display the horizontal grid line.   |  |  |
| Color                     | Set the color palette of the data series.                                 |  |  |
| Data Formats - Number     |   |  |  |
| Prefix                    | Add prefix characters to all the numeric data on the chart.               |  |  |
| Unit                      | Choose the unit to shorten the numeric data.                              |  |  |
| Suffix                    | Specify the suffix to label the customized unit.                          |  |  |
| Divider                   | Specify the divider for the customized unit.                              |  |  |
| Thousand Separator        | Choose the thousands separator for numeric data.                          |  |  |
| Decimal Separator         | Choose the decimal separator for numeric data.                            |  |  |
| Decimal Places            | Specify decimal places for numeric data.                                  |  |  |
| Negatives                 | Choose the format negative numbers are displayed.                         |  |  |
| Data Formats - DateTime   |   |  |  |
| Date / Time               | Choose the date and time format of the data.                              |  |  |
| Custom                    | Customize the date and time format.                                       |  |  |
| Total                     |   |  |  |
| Show Row Total            | Display totals in the last row of the table.                              |  |  |
|                           | Enter the name of the row total and set the color of the name and values. |  |  |
| Show Column Total         | Display totals in the last column of the table.                           |  |  |
|                           | Enter the name of the column total and set the color of the name and      |  |  |
|                           | values.   |  |  |

# Control

A control allows you to filter the data series of all charts in a dashboard during presentation.

| Month     |  |  |
|-----------|--|--|
| April     |  |  |
| May       |  |  |
| June      |  |  |
| July      |  |  |
| August    |  |  |
| September |  |  |
| October   |  |  |
| November  |  |  |
| December  |  |  |
| November  |  |  |

### **Chart Properties**

| Option                  | Description   |  |  |
|-------------------------|---|--|--|
| General                 |   |  |  |
| Background Color        | Set the background color of the chart area.                 |  |  |
| Show Border             | Display the outer chart border.                             |  |  |
| Border Color            | Set the color of the outer chart border.                    |  |  |
| Show title              | Display the chart's main title.                             |  |  |
| Title                   | Specify the title of the chart.                             |  |  |
| Title Font              | Set the font style of the title.                            |  |  |
| Position                | Set the position of the title.                              |  |  |
| Align                   | Set the horizontal alignment of the title.                  |  |  |
| Data                    |   |  |  |
| Data Label Color        | Set the color of the data label.                            |  |  |
| Style                   | Show the data as a list or a range.                         |  |  |
| Data Formats - Number   |   |  |  |
| Prefix                  | Add prefix characters to all the numeric data on the chart. |  |  |
| Unit                    | Choose the unit to shorten the numeric data.                |  |  |
| Suffix                  | Specify the suffix to label the customized unit.            |  |  |
| Divider                 | Specify the divider for the customized unit.                |  |  |
| Thousand Separator      | Choose the thousands separator for numeric data.            |  |  |
| Decimal Separator       | Choose the decimal separator for numeric data.              |  |  |
| Decimal Places          | Specify decimal places for numeric data.                    |  |  |
| Negatives               | Choose the format negative numbers are displayed.           |  |  |
| Data Formats - DateTime |   |  |  |
| Date / Time             | Choose the date and time format of the data.                |  |  |
| Custom                  | Customize the date and time format.                         |  |  |

# **DateTime Formats**

The following table shows specifiers you can use to create user-defined data formats for DateTime fields in a chart.

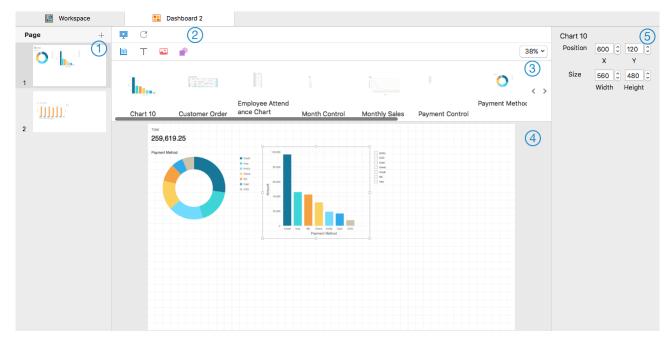

| Specifier | Description   |
|-----------|---|
| D         | Display the day as a number without a leading zero (1-31).                        |
| DD        | Display the day as a number with a leading zero (01-31).                          |
| Μ         | Display the month as a number without a leading zero (1-12).                      |
| MM        | Display the month as a number with a leading zero (01-12).                        |
| MMM       | Display the month as an abbreviation (Jan-Dec).                                   |
| MMMM      | Display the month as a full month name (January-December).                        |
| YY        | Display the year in two-digit numeric format with a leading zero (00-99).         |
| YYYY      | Display the year in four-digit numeric format (0000-9999).                        |
| h         | Display the hour as a number without a leading zero using the 12-hour clock       |
|           | (1-12).   |
| hh        | Display the hour as a number with a leading zero using the 12-hour clock (01-12). |

| Н  | Display the hour as a number without a leading zero using the 24-hour clock       |
|----|---|
|    | (0-23).   |
| НН | Display the hour as a number with a leading zero using the 24-hour clock (00-23). |
| m  | Display the minute as a number without a leading zero (0-59).                     |
| mm | Display the minute as a number with a leading zero (00-59).                       |
| S  | Display the second as a number without a leading zero (0-59).                     |
| SS | Display the second as a number with a leading zero (00-59).                       |
| wd | Display the day as a single letter abbreviation (S-S).                            |
| Wd | Display the day as an abbreviation (Sun-Sat).                                     |
| WD | Display the day as a full name (Sunday-Saturday).                                 |
| w  | Display the week of the year (1-52, start of week is Sunday).                     |
| WW | Display the week of the year (W01-W52, start of week is Sunday).                  |
| q  | Display the quarter of the year (1-4).  |
| QQ | Display the quarter of the year (Q1-Q4).  |
| р  | Display an uppercase AM with any hour before noon; display an uppercase PM        |
|    | with any hour between noon and 11:59 P.M.   |

# Dashboard

# About Dashboard

Dashboard is a collection of charts which allows you to create and view your data visualizations. When you modify a chart, any dashboards containing it will reflect the changes.

# 1 Pages Pane

The Pages pane shows thumbnail images of each page in the dashboard. If the Pages pane is hidden, choose **View** -> **Show Pages** from the menu bar.

## ② Dashboard Toolbar

The Dashboard Toolbar provides controls that you can use to refresh the data and present the dashboard.

## 3 Control List Pane

The Control List pane allows you to design the dashboard, such as adding charts, labels, images. If the Control List pane is hidden, choose **View** -> **Show Control List** from the menu bar.

#### 4 Design Pane

You can design your dashboard on the Design pane. All added objects can be moved (by dragging them with mouse or by keyboard), resized, aligned to the grid, etc.

## 9 Properties Pane

The Properties pane includes the basic layout settings. The properties vary with the type of the object. If the Properties pane is hidden, choose **View** -> **Show Properties** from the menu bar.

# **Build Dashboard**

The essential steps to create a dashboard are:

- 1. In the Workspace window, click 🖳
- 2. Enter the name of the dashboard.
- 3. Click OK.
- 4. A tab will be opened for your newly created dashboard.
- 5. Design your dashboard.
- 6. Select the properties on the right pane which can be further customized for your dashboard.

Note: Each object has different properties.

**Hint:** You can refresh dashboard to update data in charts with the most current data from their respective data sources. To manually refresh the dashboard, click *C*.

#### **Working with Grids**

#### Show Grid

To turn the grid on in the dashboard, choose View -> Show Grid from the menu bar.

#### Snap to Grid

To align objects on the dashboard with the grid, choose View -> Show Grid from the menu bar.

#### **Arrange Objects**

#### Move Objects Forward / Backward

To send an object to the back of the dashboard, control-click it and select Send to Back.

To send an object one step toward the back, control-click it and select **Send Backward**.

To bring an object to the front of the dashboard, control-click it and select Bring to Front.

To bring an object one step closer to the front, control-click it and select Bring Forward.

#### **Align Objects**

To align objects on the dashboard, select more than one object, then control-click and select Alignment -> Align Left, Align Center, Align Right, Align Top, Align Middle or Align Bottom.

#### **Change Objects Distribution**

To distribute objects on the dashboard, select more than one object, then control-click and select **Distribute** -> **Horizontal** or **Vertical**.

## Add Pages

The Pages pane shows all pages in the dashboard. It displays thumbnails of your dashboard pages.

#### To add a new page

- 1. On the Dashboard tab, click the + button on the Pages pane.
- 2. A blank page will be added and selected.

#### **Properties**

The available properties of a page:

| Option     | Description  |
|------------|--|
| Page Size  | Customize the size of pages in the dashboard.                        |
| Background | Set the background color of pages. If you choose Image Fill, you can |
|            | choose the image file and the scaling option.                        |
| Opacity    | Set the opacity of the image.  |

# Add Charts

Charts provide visual representations of the data in your data source.

#### To add a chart

1. On the Dashboard tab, click

- 2. All available charts in the workspace will be shown as thumbnails. If no charts are available, click us to create one. For detailed instructions on creating charts, see Build Charts.
- 3. Drag a chart to the Design pane.

#### **Properties**

The available properties of a chart:

| Option   | Description                          |  |
|----------|--------------------------------------|--|
| Position | Customize the position of the chart. |  |
| Size     | Customize the size of the chart.     |  |

# **Add Text Labels**

Text labels are typically used to help document the dashboard, such as adding a dashboard title, URL links.

#### To add a text label

- 1. On the Dashboard tab, click T.
- 2. Place it on the dashboard.
- 3. Enter the caption.

#### **Properties**

The available properties of a text label:

| Option           | Description                                      |
|------------------|--|
| Position         | Customize the position of the label.             |
| Size             | Customize the size of the label.                 |
| Caption          | Enter the caption of the label.                  |
| Alignment        | Specify the text alignment of the label caption. |
| Font             | Set the font style of the label caption.         |
| Bold             | Apply a bold style to the label caption.         |
| Italic           | Apply an italic style to the label caption.      |
| Background Color | Set the background color of the label.           |
| URL              | Enter URL path to display a hyperlink.           |

# Add Images

You can insert images (BMP, JPG, JPEG or PNG files) to your dashboard for design or identification purposes.

#### To add an image

1. On the Dashboard tab, click -

2. Select an image file in the Open dialog box.

#### **Properties**

The available properties of an image:

| Option        | Description                                     |
|---------------|---|
| Opacity       | Set the opacity of the image.                   |
| Position      | Customize the position of the image.            |
| Size          | Customize the size of the image.                |
| Original Size | Reset the image to its original size.           |
| URL           | Enter URL path to set the image as a hyperlink. |

# Add Shapes

Navicat includes some pre-defined shapes for creating a dashboard: line, arrow.

#### To add a shape

- 1. On the Dashboard tab, click 📄 and choose a shape type.
- 2. Place it on the dashboard.

#### **Properties**

The available properties of a shape:

| Option            | Description                              |
|-------------------|--|
| Position          | Customize the position of the shape.     |
| Color             | Set the color of the shape.              |
| Line Width        | Choose the thickness of the line/arrow.  |
| Cap Style         | Choose the cap style of the line/arrow.  |
| Dash Style        | Choose the dash style of the line/arrow. |
| Join Style        | Choose the join style of the line/arrow. |
| Begin Arrow Style | Choose the style of the arrow's back.    |
| End Arrow Style   | Choose the style of the arrow's front.   |

# **Present Dashboard**

You can present the dashboard using the whole screen. The title bar, toolbar, tab bar, Pages pane, Control List and Properties pane will be hidden while in this mode. To open a dashboard in present view, click **P**.

If you have added a control chart to your dashboard, you can filter the data series of all charts by using the control.

To exit present view, press the ESC key and the workspace window will be returned to its previous state.

# Print & Export Dashboard

#### Print to a printer

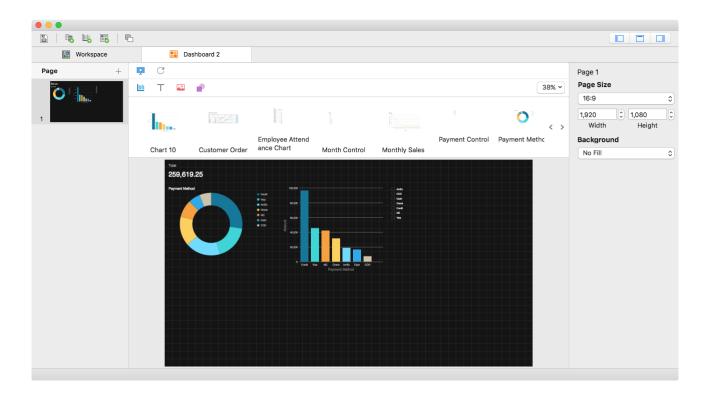

Choose **File** -> **Print** to send your dashboard pages directly to the printer. You can set the printer option in the pop-up window.

#### Export to a file

Choose File -> Export and choose the file format to create a PDF, PNG, SVG or JPG file of your dashboard pages.

# Switch Theme

Charts are not affected by the OS system theme. If you want use a Dark theme for your charts, click 🗖 to change the theme.

# Chapter 12 - Automation (Available only in Non-Essentials Edition)

# **About Automation**

Navicat allows you to automate executing jobs at one or more regular intervals. Automation can be created for Query, Backup, Data Transfer, Data Synchronization, Import, Export, MongoDump, MongoImport, MongoExport, MapReduce. You can define a list of jobs to be performed within one batch job, either run it manually, at the specified time or periodically. In the main window, click **G Automation** to open the automation object list.

**Hint:** Batch Job files are saved under the default path, e.g. ~/Library/Application Support/PremiumSoft CyberTech/Navicat CC/Navicat Premium/Profiles

**Hint:** You can run a batch job in Terminal with this command: *ProgramPath --batch-jobs BatchJobName* 

Example: ./"Navicat Premium.app"/Contents/MacOS/"Navicat Premium" -batchjob job1

# Create Batch Job (Step 1)

#### Add Jobs to Batch Job

In the bottom pane of the **General** tab, select the job type, and then browse the connection, database and/or schema to locate jobs if necessary.

| • •  |   |  |  |                                    |
|--|---|--|--|------------------------------------|
| ₽<br>₽<br>Untitled   |   |  |  |                                    |
|  |   | No No  |  |                                    |
|  | General   | Advanced Mess  | age Log  |                                    |
| Selected Job   | Гуре  | Connection Type  | Connection   | Project Name                       |
| <ul> <li>data_sync_profile</li> <li>data_transfer_profile</li> <li>import_job_location</li> <li>sales_report</li> <li>Backup public</li> <li>Backup sakila</li> <li>export_job_duty</li> <li>Backup hr</li> <li>dump_hr</li> </ul> | Data Sync<br>Data Transfer<br>Import<br>Query<br>Backup<br>Backup<br>Export Table<br>Backup<br>MongoDump  | MYSQL<br>PREMIUM<br>ORA<br>MYSQL<br>PGSQL<br>MYSQL<br>PGSQL<br>MYSQL<br>MONGODB  | Production Server<br>MySQL<br>PostgreSQL<br>MySQL<br>PostgreSQL<br>Testing Server 02 | Project DT-0052<br>Project DT-0052 |
| <ul> <li>Data Transfer</li> <li>Data Sync</li> <li>Backup</li> <li>Export</li> <li>Import</li> <li>Query</li> <li>MongoExport</li> <li>MongoImport</li> <li>MapReduce</li> </ul>   | <ul> <li>► Control Team</li> <li>► MysQL</li> <li>► hr</li> <li>➡ report</li> </ul> | MH-0015<br>DT-0052 (adamsm<br>n A<br>n B<br>esting Server 02<br>esting Server 02<br>uction Server<br>ttions<br>n RDS for MySQL | staff_list Q   | luery<br>luery<br>luery            |

Move selected jobs or all jobs from the **Available Job** list to the **Selected Job** list by clicking  $\overset{\boxtimes}{\leftarrow}$  or  $\overset{\boxtimes}{\leftarrow}$ . To delete selected jobs or all jobs from the Selected Jobs list, click  $\overset{\Box}{\leftarrow}$  or  $\overset{\boxtimes}{\leftarrow}$ . You are allowed to run profiles from different servers in a single batch job.

To rearrange the sequence of the selected jobs, drag a job to the desired location in the Selected Job list.

If you want to backup whole server, you can select the connection and select Backup Server xxx.

Exported files can be added to the batch job as mail attachment. Select the job in the Selected Job list and click  $\mathcal{P}_{\bullet}$  or  $\mathcal{P}_{\bullet}$  to add or remove the mail attachment.

#### **Set Email Notification**

Navicat allows you to generate and send personalized emails with results returned from a schedule. The results can be emailed to multiple recipients. Check the **Send Email** option in the **Advanced** tab and enter required information.

#### From

Specify email address of sender. For example, someone@navicat.com.

#### To, CC

Specify email addresses of each recipient, separating them with a comma or a semicolon (;).

#### Subject

Specify the email subject with customized format.

#### Body

Write email content.

#### Host (SMTP Server)

Enter your Simple Mail Transfer Protocol (SMTP) server for outgoing messages.

#### Port

Enter the port number you connect to your outgoing email (SMTP) server.

#### **Use authentication**

Check this option and enter Username and Password if your SMTP server requires authorization to send email.

#### **Secure Connection**

Specify the connection to use **TLS**, **SSL** secure connection or **Never**.

#### Send Test Mail

Navicat will send you a test mail indicating success or failure.

#### Save / Run Batch Job

Before setting schedule, click the 🖺 button to save the batch job.

You can run the batch job manually by clicking the button. The **Message Log** tab displays the execution progress, execution time, and success or failure messages.

# Schedule Batch Job (Step 2)

You can click  $\bigcirc$  to set schedule for running a batch job and click  $\bigcirc$  to remove the schedule.

"Hour" and "Minute" fields must be specified. If a field is left without a value, then all the values will be used. For example, if the "Weekday" field is empty, then the system will treat the field to be entered with "0, 1, 2, 3, 4, 5, 6". Use commas to separate values. For example, "0, 1, 3, 6". Use hyphen, without spaces to indicate values. For example, "0-4".

Example: The batch job will be executed at 6:30pm every weekday.

| 000   | Schedule |      |
|---|----------|------|
| Run the Batch Job whenever the clock<br>matches this pattern: |          |      |
| Hour*:  | 18       | 0-23 |
| Minute*:  | 30       | 0-59 |
| Weekday:  | 1-5      | 0-6  |
| Day:  |          | 1-31 |
| Month:  |          | 1-12 |
|   |          |      |
| ?   | Cancel   | ОК   |

**Note:** Please save the batch job before setting schedule. Passwords must be saved in the Connection window before running your schedule.

| Host:          | 192.168.1.68    |
|----------------|-----------------|
| Port:          | 3357            |
| User Name:     | root            |
| Edit Password: | 0 0 0 0 0 0 0 0 |
|                | ✓ Save Password |

# Chapter 13 - Backup & Restore

# About Backup & Restore

A secure and reliable server is closely related to performing regular backups, as failures will probably occur sometimes - caused by attacks, hardware failure, human error, power outages, etc.

Navicat provides a built-in backup and restore tool for users to backup/restore MySQL, PostgreSQL, SQLite and MariaDB database objects. For Oracle, SQL Server and MongoDB, users can use the following features:

- Oracle Data Pump
- SQL Server Backup & Restore
- MongoDump & MongoRestore

# Built-in Backup & Restore Tool (Available only in Non-Essentials Edition)

# About Built-in Backup & Restore Tool

The built-in backup & restore tool allows you to backup/restore database objects for your database. You can save your settings as a profile for future use or setting automation tasks. In the main window, click **Backup** to open the backup object list.

Hint: Backup files are saved under the Settings Location. To open the folder, control-click a backup file and select Show in Finder.

Note: Available only for MySQL, PostgreSQL, SQLite and MariaDB.

# Backup

#### **General Properties**

In this tab, you can view the server and database information. Enter a comment for the backup file if necessary.

#### **Object Selection**

In this tab, choose database objects you wish to backup.

| All <objects> during execution</objects> | All the database objects being backed up, all newly added database  |
|--|---|
| (*)                                      | objects will also be backed up without amending the backup profile. |
| Custom                                   | Only the checked database objects will be backed up. However, if    |
|  | you add any new database objects in the database and/or schema      |
|  | after you create your backup profile, the newly added database      |

| objects will not be backed up unless you manually modify the Objects |
|--|
| list.  |

#### **Advanced Properties**

Note: The following options depend on the connection server type and sort in ascending order.

#### Lock all tables

Lock all objects while backup is being processed.

#### Use single transaction (InnoDB only)

If a table uses InnoDB storage engine, with this option is on, Navicat uses transaction before the backup process starts.

#### Use specified file name

Define your file name for backup. Otherwise, your backup file will be named with "YYYYMMDDhhmmss" format.

## Restore

**Restore** feature will firstly drop the selected objects of the database, then recreate the new objects according to your backup. Finally, inserting the data.

#### Restore a backup to an existing database/schema

- 1. In the main window, open a database/schema.
- 2. Click **Backup** and select an existing backup file.
- 3. Click 🤪 from the object toolbar.
- 4. Choose the restore options and click **Start**.

#### Restore a backup to a new database/schema

- 1. Create and open a new database/schema.
- 2. Click Backup.
- 3. In the Objects tab, control-click anywhere and select **Restore Backup from**.
- 4. Browse the backup file.
- 5. Choose the restore options and click **Start**.

Hint: You can also restore Navicat Windows and Linux backups.

Note: You must have Create, Drop and Insert privileges (MySQL/MariaDB or PostgreSQL) to run the restore.

#### **General Properties**

In this tab, you can view the target server and database information and the backup file information.

#### **Object Selection**

In this tab, choose database objects you wish to restore.

#### **Advanced Properties**

Note: The following options depend on the connection server type, the backup file version and sort in ascending order.

#### **Continue on error**

Ignore errors that are encountered during the restore process.

#### **Create indexes**

Create indexes for the restored table with this option is on.

#### **Create tables**

Create tables during the restore process with this option is on.

#### **Create records**

Restore table records with this option is on. Otherwise, only table structures will be restored.

#### **Create triggers**

Create triggers for the restored table with this option is on.

#### **Empty table**

Delete all table records in the database/schema.

#### Lock tables for write

Lock the tables to prevent user to modify tables during the restore process.

#### **Overwrite existing events**

Overwrite if events already exist in the database/schema.

#### **Overwrite existing functions**

Overwrite if functions already exist in the database/schema.

#### **Overwrite existing indexes**

Overwrite if indexes already exist in the database/schema.

#### **Overwrite existing sequences**

Overwrite if sequences already exist in the database/schema.

#### **Overwrite existing tables**

Overwrite if tables already exist in the database/schema.

#### **Overwrite existing triggers**

Overwrite if triggers already exist in the database/schema.

#### **Overwrite existing types**

Overwrite if types already exist in the database/schema.

#### **Overwrite existing views**

Overwrite if views already exist in the database/schema.

#### Use extended insert statements

Check this option if you want to insert records using extended insert syntax.

Example: INSERT INTO `users` VALUES ('1', 'Peter McKindsy', '23'), ('2', 'Johnson Ryne', '56'), ('0', 'Katherine', '23');

#### **Use transaction**

Check this option if you want to rollback all data when error occurs.

# **Extract SQL**

Extract SQL allows extracting SQL into a SQL file from your backup file.

#### Extract a backup file that is in your database/schema

- 1. Open a database/schema.
- 2. Click **Backup** and select an existing backup file.
- 3. Click , from the object toolbar.
- 4. Choose the Extract SQL options and click Start.
- 5. Choose a path for the SQL file.

#### Extract a backup file that is in any location

- 1. Open any one of your databases/schemas.
- 2. Click Backup.

- 3. In the Objects tab, control-click anywhere and select Extract SQL from.
- 4. Browse the backup file.
- 5. Choose the Extract SQL options and click Start.
- 6. Choose a path for the SQL file.

# Oracle Data Pump (Available only in Non-Essentials Edition)

# About Oracle Data Pump

**Data Pump** includes two utilities: Data Pump Export and Data Pump Import. Data Pump Export is for unloading data and metadata into a dump file set. Data Pump Import is for loading an export dump file set into a target system. In the main window, click **Data Pump** to open the data dump object list.

To change the directory of the dump file set, control-click anywhere in the Objects tab and select Change Directory.

**Note:** Data Pump is added in Oracle 10g or later. You require SYSDBA role to perform it. Dump file sets are stored in servers.

# **Oracle Data Pump Export**

Before executing Data Pump Export, select the **SQL Preview** tab to review the SQL statements. Then, you can click the **Start** button to run the export process.

You can save the Data Pump Export settings to a profile for future use. Data Pump Export profiles (.nbakora) are saved under the Settings Location.

To show the hidden tabs (advanced options), check the Show Advanced Options option.

#### **General Properties**

#### Job Name

Specify the name of the job.

#### Mode

Choose the export mode: FULL, TABLESPACE, SCHEMAS, TABLE.

#### Content

Choose which data to export.

#### **Export Data**

Select which objects to export. If you select the TABLE export mode, choose a schema in the **Schema** drop-down menu.

#### **Dump Files**

Add dump files to the dump file set for the export.

#### **Metadata Filter**

In this tab, you can include or exclude specific objects types.

#### **Data Filter**

#### Query

Specify a subquery that is added to the end of the SELECT statement for a table.

#### Sample

Specify a percentage for sampling the data blocks to be moved.

#### **Remap Data**

In this tab, you can specify remap functions for column data.

#### Encryption

#### **Encryption Content**

Choose what to encrypt in the dump file set.

#### **Encryption Algorithm**

Choose a cryptographic algorithm to perform encryption.

#### **Encryption Mode**

Choose the encryption mode: Transparent, Encryption Password, Dual.

#### **Encryption Password**

If you choose the Encryption Password or Dual encryption mode, enter a password to encrypt data written to the dump file.

#### **Confirm Password**

Re-type your password.

#### **Advanced Properties**

#### **Thread Number**

Enter the maximum number of worker processes that can be used for the job.

#### **Reuse file**

Check this option to overwrite a preexisting file.

#### Enable XMLCLOBS

Check this option to enable data options for XMLCLOBS.

#### **Enable cluster**

Check this option to start workers on instances usable by the job.

#### Service Name

Specify a service name that used to constrain the job to specific instances or to a specific resource group.

#### Version

Specify the version of database objects to be extracted.

#### **Database Link**

Choose a database link to the remote database that will be the source of data and metadata for the job.

#### Estimate

Choose the estimate method for the size of the tables should be performed before starting the job.

#### **Compression Type**

Specify which data to compress before writing to the dump file set.

#### Transportable

If you select the TABLE export mode, choose to never or always use the transportable option.

#### **Access Method**

Choose an alternative method to unload data if the default method does not work.

#### **Source Edition**

Specify the application edition.

#### Directory

Choose the directory for saving the log file.

#### Log File Name

Enter the name of the log file.

#### **Flashback SCN**

Enter the system change number (SCN) that used to enable the Flashback Query utility.

#### **Flashback Time**

Select a timestamp for finding a SCN.

# **Oracle Data Pump Import**

Before executing Data Pump Import, select the **SQL Preview** tab to review the SQL statements. Then, you can click the **Start** button to run the import process.

To show the hidden tabs (advanced options), check the Show Advanced Options option.

#### **General Properties**

#### Job Name

Specify the name of the job.

#### Mode

Choose the import mode: FULL, TABLESPACE, SCHEMAS, TABLE.

#### Content

Choose which data to import.

#### **Table Exists Action**

Specify the action to be performed when data are loaded into a preexisting table.

#### Import Data

Select which objects to import. If you select the TABLE import mode, specify the schema name in the Schema text box.

#### **Dump Files**

Add dump files to the dump file set for the import.

#### Network

#### **Database Link**

Choose a database link to the remote database that will be the source of data and metadata for the job.

#### Estimate

Choose the estimate method for the size of the tables should be performed before starting the job.

#### **Flashback SCN**

Enter the system change number (SCN) that used to enable the Flashback Query utility.

#### **Flashback Time**

Select a timestamp for finding a SCN.

#### Transportable

If you select the TABLE export mode, choose to never or always use the transportable option.

#### **Datafile Path**

Specify the full file specification for a datafile in the transportable tablespace set.

#### **Filters**

#### Include/Exclude

Include or exclude specific objects types.

#### Query

Specify a subquery that is added to the end of the SELECT statement for a table.

#### **Remap Data**

#### **Remap Data**

Specify remap functions for column data.

#### **Remap DataFiles**

Specify the remapping for data files.

#### **Remap Objects**

#### **Remap Schemas**

Specify the remapping for schemas.

#### **Remap Tablespaces**

Specify the remapping for tablespaces.

#### **Remap Tables**

Specify remap functions for tables.

#### **Advanced Properties**

#### Number of worker processes to be used

Enter the maximum number of worker processes that can be used for the job.

#### **Reuse datafiles**

Check this option to reuse existing data files for creating tablespace.

#### Skip unusable indexes

Check this option to skip loading tables that have indexes that were set to the Index Unusable state.

#### Skip const error

Check this option to skip constraint violations and continue the load.

#### **Disable append hint**

Check this option to prevent the append hint from being applied to the data load.

#### Cluster

Check this option to start workers on instances usable by the job.

#### Service Name

Specify a service name that used to constrain the job to specific instances or to a specific resource group.

#### Version

Specify the version of database objects to be extracted.

#### Streams configuration

Check this option to import any general Streams metadata that may be present in the export dump file

#### **Partition Options**

Choose how to handle partitioned tables during the import operation.

#### **Access Method**

Choose an alternative method to unload data if the default method does not work.

#### **Encryption Password**

Enter the password if an encryption password was specified in Data Pump Export.

#### **Target Edition**

Specify the database edition into which objects should be imported.

#### Segment Attributes, Segment Creation, Storage, OID, PCTSpace

Choose the objects that the transformations to be applied to.

#### Directory

Choose the directory for saving the log file.

#### Log File Name

Enter the name of the log file.

# SQL Server Backup & Restore (Available only in Non-Essentials

# Edition)

## About SQL Server Backup & Restore

The **SQL Server Backup** feature provides an important safeguard for protecting your SQL Server data. In the main window, click SQL Server Backup to open the backup object list.

If you want to backup with the setting of an existing backup file, you can control-click a backup file in the Objects tab and select **Backup From This Setting**.

Note: Backup files are stored in servers.

If you want to restore from a backup file that is not listed in the Objects tab, you can control-click anywhere in the Objects tab and select **Restore From File**.

# SQL Server Backup

Before starting the backup process, click the **Generate SQL** button to review the SQL statements. Then, you can click the **Start** button to run the backup process.

You can save the backup settings to a profile for future use. Backup profiles (.nbakmssql) are saved under the Settings Location.

To show the hidden tabs (advanced options), check the Show Advanced Options option.

#### **General Properties**

#### **Backup Set Name**

Specify the name of the backup set.

#### Description

Specify the description of the backup set.

#### **Backup Type**

Choose the type of the backup that you want to perform: Full Backup, Differential Backup, Transaction-Log Backup.

#### Copy-only

Check this option to specify that the backup is a copy-only backup.

#### New media set

Create a new media set for this backup. To add backup devices or files to the list, click the Add device button.

#### **Existing media set**

Choose an existing media set for the backup.

#### Components

In this tab, you can choose to backup the whole database, the partial database, or specific files or groups.

#### **Advanced Properties**

#### **Never expire**

Specify the backup set never expires.

#### **Expire after**

Specify the number of days that must elapse before this backup media set can be overwritten.

#### Expire on

Specify when the backup set expires and can be overwritten.

#### Password

Enter a password for the backup set.

#### Format media set

Check this option to specify that a new media set be created.

#### **New Name**

Enter the name of the new media set.

#### Description

Specify the description of the media set.

#### **Overwrite all backups**

Check this option to specify that all backup sets should be overwritten, but preserves the media header.

#### Check media name and backup set expiration

Check this option to check the expiration date and time of the backup sets on the media before overwriting them.

#### Media Set Name

Specify the media name for the entire backup media set.

#### Password

Enter a password for the media set.

#### Truncate the transaction log

Choose this option to truncate the transaction log.

#### Back up the tail of the log and leave the database in the restoring state

Choose this option to back up the tail of the log and leaves the database in the RESTORING state.

#### Verify backup

Check this option to verify the backup.

#### Perform checksum

Check this option to enable the backup checksums.

#### **Continue on error**

Ignore errors (such as invalid checksums or torn pages) that are encountered during this backup.

#### Compression

Choose whether backup compression is performed on this backup.

## **SQL Server Restore**

Before starting the restore process, click the **Generate SQL** button to review the SQL statements. Then, you can click the **Start** button to run the restore process.

#### **General Properties**

#### **Restore to database**

Select a database to restore.

### Source of backup set

If you chose **Restore From File** in the Objects tab, you can add backup devices or files to the list by clicking the **Add device** button.

### Latest possible

Choose this option if do not have the restore point.

### **Specific time**

Choose this option to specify that the database be restored to the state it was in as of the date and time.

### **Marked transaction**

Choose this option to recover to a specified recovery point.

### Include marked transaction

Check this option to include the specified transaction in the recovery.

### **Restore plan**

If you chose **Restore From File** in the Objects tab, you can choose the database backup files from the list.

### **Advanced Properties**

### Restore database files to

Specify that the data or log file should be moved by restoring it to the **Restore To** location.

### WITH REPLACE

Check this option to include the WITH REPLACE argument.

### WITH RESTRICTED\_USER

Check this option to include the WITH RESTRICTED\_USER argument.

### WITH KEEP\_REPLICATION

Check this option to include the WITH KEEP\_REPLICATION argument.

### RECOVERY

Choose this option to roll back all uncommitted transactions.

### NORECOVERY

Choose this option to not roll back the uncommitted transactions.

Specify a Standby file that allows the recovery effects to be undone.

### MongoDump & MongoRestore

### About MongoDump & MongoRestore

MongoDB provides two utilities for backup and restore operations: MongoDump and MongoRestore. They are useful for creating backups of small database and restoring data.

### MongoDump

MongoDump can read data from a MongoDB database and create high fidelity BSON files.

Note: You must have mongodump executable for this feature to work.

### To dump a file

- 1. In Navicat main window, control-click your database or collection and select MongoDump.
- 2. In the General and Advanced tabs, select the output path and the appropriate dump options.
- 3. Click the **Start** button to begin the dump process. The **Message Log** tab will display the dump progress, execution time, and success or failure messages.

You can save your settings as a profile for future use or setting automation tasks. To open a saved profile, click the **Load Profile** button and select a profile from the list.

Hint: Profiles are saved under the default path, e.g. ~/Library/Application Support/PremiumSoft CyberTech/Navicat CC/Common/Profiles

### MongoRestore

MongoRestore can load data from a binary database dump created by MongoDump into a MongoDB database.

Note: You must have mongorestore executable for this feature to work.

### To restore database

- 1. In Navicat main window, control-click your database and select MongoRestore.
- 2. In the General and Advanced tabs, select the input file/directory path and the appropriate restore options.
- 3. Click the **Start** button to begin the restore process. The **Message Log** tab will display the restore progress, execution time, and success or failure messages.

You can save your settings as a profile for future use. To open a saved profile, click the **Load Profile** button and select a profile from the list.

Hint: Profiles are saved under the default path, e.g. ~/Library/Application Support/PremiumSoft CyberTech/Navicat CC/Common/Profiles

# Chapter 14 - Server Security

### About Server Security

Navicat provides a powerful tool for you to manage server user accounts and the privileges of database objects. All information of users and privileges are stored in the server. In the main window, click **User** to open the user/role object list.

### MySQL / MariaDB User & Role Management

### **User Designer**

### **General Properties**

### **User Name**

Define a name for the user account.

### Host

Enter a host name or an IP address where the user connected from. % means any host.

### Plugin

Select the account authentication plugin for the user.

### Password

Specify a login password for the user.

### **Confirm Password**

Re-type the login password.

### **Expire Password Policy**

Select the password expiration policy for the user account.

### **Member Of**

Note: Roles are available for MySQL 8.0 or later or MariaDB 10.0.5 or later.

In the grid, check the **Granted** or **Default** option against the role listed in **Name** to assign this user to be a member of the selected role.

### **Advanced Properties**

### Maximum Queries Per Hour, Maximum Updates Per Hour, Maximum Connections Per Hour

Specify the maximum number of queries, updates, and connections that a user can perform during any given one-hour period. 0 means no limit.

### **Maximum User Connection**

Specify the maximum number of simultaneous connections that a user can make.

### Use OLD\_PASSWORD encryption

Use the OLD\_PASSWORD() function to generate a hash value for storing user password.

### SSL Type

Specify the SSL/TLS-related options for the user account.

| ANY       | Require SSL encryption when the user connects.                          |
|-----------|---|
| SPECIFIED | Require a valid certificate when the user connects. Provide SSL Cipher, |
|           | Certificate Issuer, or Certificate Subject.                             |
| X509      | Require a valid certificate when the user connects.                     |

### **Server Privileges**

In the grid, check the **Grant** option against the server privilege listed in **Privilege** to assign this user to have that privilege. To grant or revoke all privileges, control-click on the grid and select **Grant All** or **Revoke All**.

### **Object Privileges**

To edit specific object privileges for the user, click 💼 to open the window and follow the steps below:

- 1. Expand the node in the tree view until reaching to the target object.
- 2. Check the object to show the grid on the right pane.
- 3. In the grid, check the **Grant** option against the privilege listed in **Privilege** to assign this user to have that privilege. To grant or revoke all privileges, control-click on the grid and select **Grant All** or **Revoke All**.

### **Role Designer**

Note: Roles are available for MySQL 8.0 or later or MariaDB 10.0.5 or later.

### **General Properties**

### **Role Name**

Define a name for the role.

### **Members**

In the grid, check the **Granted** option against the role listed in **Name** to assign the selected role/user to be a member of this role.

### **Member Of**

In the grid, check the **Granted** option against the role/user listed in **Name** to assign this role to be a member of the selected role.

### **Server Privileges**

In the grid, check the **Grant** option against the server privilege listed in **Privilege** to assign this role to have that privilege. To grant or revoke all privileges, control-click on the grid and select **Grant All** or **Revoke All**.

### **Object Privileges**

To edit specific object privileges for the role, click 🎰 to open the window and follow the steps below:

- 1. Expand the node in the tree view until reaching to the target object.
- 2. Check the object to show the grid on the right pane.
- 3. In the grid, check the **Grant** option against the privilege listed in **Privilege** to assign this role to have that privilege. To grant or revoke all privileges, control-click on the grid and select **Grant All** or **Revoke All**.

### Oracle User & Role Management

### **User Designer**

### **General Properties**

### **User Name**

Define a name for the user.

### Authentication

Select the authentication method.

| PASSWORD | Create a user. Specify a Password and re-type it in Confirm Password. Check the           |
|----------|---|
|          | Expire Password option to force the user to change the password on the first attempted    |
|          | login.  |
| EXTERNAL | Create a user authorised by an external service. Enter the certificate distinguished name |
|          | or the Kerberos principal name in External Name.  |
| GLOBAL   | Create a user authorised by the enterprise directory service. Enter the X.509 name at the |
|          | enterprise directory service that identifies the user in X.500 Distinguished Name.        |

### **Default Tablespace**

Choose the default tablespace for objects that the user creates.

### **Temporary Tablespace**

Choose the tablespace or tablespace group for the user's temporary segments.

### Profile

Choose the profile that assign to the user.

### **Locked Account**

Lock the user's account and disable access.

### **Enable Editions**

Allow the user to create multiple versions of editionable objects in this schema.

### Roles

In the grid, check the **Grant**, **Admin Option** or **Default** option against the role listed in **Role Name** to assign this user to be a member of the selected role.

### Quotas

In the grid, specify the maximum amount of space that the user can allocate in the tablespaces. Enter the **Quota** and choose the **Unit**. **Unlimited** lets the user allocate space in the tablespace without bound. Multiple tablespaces can be set.

### **Server Privileges**

In the grid, check the **Grant** or **Admin Option** option against the server privilege listed in **Privilege** to assign this user to have that privilege. To grant or revoke all privileges, control-click on the grid and select **Grant All**, **Grant All With Admin Option** or **Revoke All**.

### **Object Privileges**

To edit specific object privileges for the user, click 💼 to open the window and follow the steps below:

- 1. Expand the node in the tree view until reaching to the target object.
- 2. Check the object to show the grid on the right pane.
- In the grid, check the Grant or Grant Option option against the privilege listed in Privilege to assign this user to have that privilege. To grant or revoke all privileges, control-click on the grid and select Grant All, Grant All With Grant Option or Revoke All.

### **Role Designer**

### **General Properties**

### **Role Name**

Define a name for the role.

### Authentication

Select the authentication method.

| PASSWORD       | Create a role. Specify a <b>Password</b> and re-type it in <b>Confirm Password</b> . |
|----------------|--|
| EXTERNAL       | Create a role authorised by an external service.                                     |
| GLOBAL         | Create a role authorised by the enterprise directory service.                        |
| NOT IDENTIFIED | Create a role without a password.  |

### Roles

In the grid, check the **Granted** or **Admin Option** option against the role listed in **Role Name** to assign this role to be a member of the selected role.

### Members

In the grid, check the **Granted** or **Admin Option** option against the user listed in **Name** to assign the selected user to be a member of this role.

### **Server Privileges**

In the grid, check the **Grant** or **Admin Option** option against the server privilege listed in **Privilege** to assign this role to have that privilege. To grant or revoke all privileges, control-click on the grid and select **Grant All**, **Grant All With Admin Option** or **Revoke All**.

### **Object Privileges**

To edit specific object privileges for the role, click is to open the window and follow the steps below:

- 1. Expand the node in the tree view until reaching to the target object.
- 2. Check the object to show the grid on the right pane.
- 3. In the grid, check the **Granted** option against the privilege listed in **Privilege** to assign this role to have that privilege. To grant or revoke all privileges, control-click on the grid and select **Grant All** or **Revoke All**.

### Maintain User

Navicat provides a complete solution for maintaining Oracle users.

1. In the main window, select users in the Objects tab.

- 2. Control-click the selected users.
- 3. Choose **Maintain**, and then choose a maintain option the from the pop-up menu.

| Option      | Description                                     |
|-------------|---|
| Lock User   | Lock the user account and disable access.       |
| Unlock User | Unlock the user account and enable access.      |
| Expire User | Set the password of the user account to expire. |

### PostgreSQL User, Group & Role Management

### **User Designer**

Note: Users are available for PostgreSQL 8.0 or below.

### **General Properties**

### **User Name**

Define a name for the user.

### **User ID**

Specify an ID for the user.

### Password

Specify a login password for the user.

### **Confirm Password**

Re-type the login password.

### **Password Encryption**

Choose whether the password is stored ENCRYPTED or UNENCRYPTED in the system catalogs.

### **Expiry Date**

Set a datetime that the user's password will expire. If this option is omitted, the password will be valid for all time.

### Superuser

Check this option to determine the user is a superuser.

### Can create databases

Check this option to allow the user to create databases.

### **Members Of**

In the grid, check the **Granted** option against the group listed in **Group Name** to assign this user to be a member of the selected group.

### **Object Privileges**

To edit specific object privileges for the user, click to open the window and follow the steps below:

- 1. Expand the node in the tree view until reaching to the target object.
- 2. Check the object to show the grid on the right pane.
- In the grid, check the Granted or Grant Option option against the privilege listed in Privilege to assign this user to have that privilege. To grant or revoke all privileges, control-click on the grid and select Grant All, Grant All With Grant Option or Revoke All.

### **Group Designer**

Note: Groups are available for PostgreSQL 8.0 or below.

### **General Properties**

### **Group Name**

Define a name for the group.

### **Group ID**

Specify an ID for the group.

### **Members**

In the grid, check the **Granted** option against the user listed in **Member** to assign the selected user to be a member of this group.

### **Object Privileges**

To edit specific object privileges for the group, click is to open the window and follow the steps below:

- 1. Expand the node in the tree view until reaching to the target object.
- 2. Check the object to show the grid on the right pane.
- 3. In the grid, check the **Granted** option against the privilege listed in **Privilege** to assign this group to have that privilege. To grant or revoke all privileges, control-click on the grid and select **Grant All** or **Revoke All**.

### **Role Designer**

Note: Roles are available for PostgreSQL 8.1 or later.

### **General Properties**

### **Role Name**

Define a name for the role.

### **Role ID**

Specify an ID for the role.

### Can Login

Check this option to allow the role to log in.

### Password

Specify a login password for the role.

### **Confirm Password**

Re-type the login password.

### **Password Encryption**

Choose whether the password is stored ENCRYPTED or UNENCRYPTED in the system catalogs.

### **Connection Limit**

Specify how many concurrent connections the role can make. -1 means no limit.

### **Expiry Date**

Set a datetime that the role's password will expire. If this option is omitted, the password will be valid for all time.

### Can create databases

Check this option to allow the role to create databases.

### Superuser

Check this option to determine the role is a superuser.

### Can modify catalog directly

Check this option to allow the role to update system catalog.

### Inherits rights from parent roles

Check this option to determine the role inherits the privileges of roles it is a member of.

### Can create roles

Check this option to allow the role to create roles.

### **Can replicate**

Check this option to allow the role to initiate streaming replication or put the system in and out of backup mode.

### Can bypass RLS

Check this option to allow the role to bypasses every row-level security (RLS) policy.

#### **Members**

In the grid, check the **Granted** or **Admin Option** option against the role listed in **Member** to assign the selected role to be a member of this role.

### **Members Of**

In the grid, check the **Granted** or **Admin Option** option against the role listed in **Role Name** to assign this role to be a member of the selected role.

### **Object Privileges**

To edit specific object privileges for the role, click open the window and follow the steps below:

- 1. Expand the node in the tree view until reaching to the target object.
- 2. Check the object to show the grid on the right pane.
- 3. In the grid, check the **Granted** or **Grant Option** option against the privilege listed in **Privilege** to assign this role to have that privilege. To grant or revoke all privileges, control-click on the grid and select **Grant All, Grant All With Grant Option** or **Revoke All**.

### SQL Server Login, Role & User Management

### Login Designer

Note: The following options and tabs depend on the server version and the authentication type.

### **General Properties**

### **User Name**

Define a name for the login.

### **Authentication Type**

Select the authentication type of the login.

### Password

Specify a password for the login.

### **Confirm Password**

Re-type the login password.

### **Specify Old Password**

Check this option to enter the old password used by this account when editing the login.

### Enforce password policy

Check this option to force password to follow password policy of SQL Server.

### **Enforce password expiration**

Check this option to force password to have expiry date.

### User must change password at next login

Check this option to force user to change password every time when login.

### **Default Database**

Select the default database when login.

### **Default Language**

Select the default display language when login.

### **Certificate Name**

Select the certificate to be used for the login.

### Asymmetric Key Name

Select the asymmetric key to be used for the login.

### Credential

Select the credentials to be mapped to the login.

### Enabled

Check this option to enable the login.

### **User Mappings**

In the grid, check the **Database** and enter the **User** and **Default Schema** to create user for login the database and specify the first schema will be searched by the server.

#### Roles

In the list, assign this server login to be a member of the selected server role.

#### **Server Permissions**

In the grid, check the **Grant**, **Grant Option** or **Deny** option against the server permissions listed in **Privileges** to assign this login to have that permission. To grant, deny or revoke all permissions, control-click on the grid and select **Grant All**, **Grant All With Admin Option**, **Deny All** or **Revoke All**.

#### **Login Permissions**

In the grid, check the permissions against the endpoint listed in **Login** to assign this login to have that login permission. Click the checkbox twice to grant the permission with Grant Option. Click the checkbox three times to deny the permission.

### **Endpoint Permissions**

In the grid, check the permissions against the endpoint listed in **Endpoint** to assign this login to have that endpoint permission. Click the checkbox twice to grant the permission with Grant Option. Click the checkbox three times to deny the permission.

### Server Role Designer

Note: Azure SQL Database does not support Server Role.

In the Members tab, assign the selected login to be a member of this server role.

### Database User Designer

Note: The following options and tabs depend on the server version and the user type.

#### **General Properties**

#### **User Name**

Define a name for the database user.

#### Authentication

Select the security type for database user.

### **User Name**

Assign a SQL Server login that the database user uses.

### **Default Schema**

Select the default schema that will own objects created by the database user.

### **Certificate Name**

Select the certificate to be used for the database user.

### Asymmetric Key Name

Select the asymmetric key to be used for the database user.

### Roles

In the list, assign this database user to be a member of the selected database role.

#### **Owned Schemas**

In the list, check the schemas that are owned by the database user.

### **Database Permissions**

In the grid, check the **Grant**, **Grant Option** or **Deny** option against the database permissions listed in **Privilege** to assign this database user to have that permission. To grant, deny or revoke all permissions, control-click on the grid and select **Grant All, Grant All With Admin Option**, **Deny All** or **Revoke All**.

### **Object Privileges**

To edit specific object permissions for the database user, click 🔤 to open the window and follow the steps below:

- 1. Expand the node in the tree view until reaching to the target object.
- 2. Check the object to show the grid on the right pane.
- 3. In the grid, check the **Grant**, **Grant Option** or **Deny** option against the permission listed in **Privilege** to assign this database user to have that permission. To grant, deny or revoke all permissions, control-click on the grid and select **Grant All**, **Grant All With Grant Option**, **Deny All** or **Revoke All**.

### Database Role Designer

Note: The following options and tabs depend on the server version.

### **General Properties**

### **Role Name**

Define a name for the database role.

### Owner

Assign the owner for the database role.

#### **Members**

In the list, assign the selected database users and roles to be a member of this database role.

#### **Members Of**

In the list, assign this database role to be a member of the selected database roles.

#### **Owned Schemas**

In the list, check the schemas that are owned by the database role.

#### **Database Permissions**

In the grid, check the **Grant**, **Grant Option** or **Deny** option against the database permissions listed in **Privilege** to assign this database role to have that permission. To grant, deny or revoke all permissions, control-click on the grid and select **Grant All**, **Grant All With Admin Option**, **Deny All** or **Revoke All**.

#### **Object Privileges**

To edit specific object permissions for the database role, click 📫 to open the window and follow the steps below:

- 1. Expand the node in the tree view until reaching to the target object.
- 2. Check the object to show the grid on the right pane.
- 3. In the grid, check the **Grant**, **Grant Option** or **Deny** option against the permission listed in **Privilege** to assign this database role to have that permission. To grant, deny or revoke all permissions, control-click on the grid and select **Grant All**, **Grant All With Grant Option**, **Deny All** or **Revoke All**.

### Application Role Designer

**Note:** Azure SQL Database does not support Application Role. The following options and tabs depend on the server version.

#### **General Properties**

#### **Role Name**

Define a name for the application role.

#### Password

Specify a password for the application role.

### **Confirm Password**

Re-type the password.

#### Default Schema

Select the default schema that will own objects created by the application role.

### **Owned Schemas**

In the list, check the schemas that are owned by the application role.

### **Database Permissions**

In the grid, check the **Grant**, **Grant Option** or **Deny** option against the database permissions listed in **Privilege** to assign this application role to have that permission. To grant, deny or revoke all permissions, control-click on the grid and select **Grant All, Grant All With Admin Option**, **Deny All** or **Revoke All**.

### **Object Privileges**

To edit specific object permissions for the application role, click 🎰 to open the window and follow the steps below:

- 1. Expand the node in the tree view until reaching to the target object.
- 2. Check the object to show the grid on the right pane.
- 3. In the grid, check the **Grant**, **Grant Option** or **Deny** option against the permission listed in **Privilege** to assign this application role to have that permission. To grant, deny or revoke all permissions, control-click on the grid and select **Grant All**, **Grant All With Grant Option**, **Deny All** or **Revoke All**.

### SQLite User Management

**Note:** By default, a SQLite database does not require user authentication (no-authentication-required database). After you created a user, the database will be marked as requiring authentication (authentication- required database). Then, user need to provide username and password when connecting to the database file.

### **General Properties**

### **User Name**

Define a name for the user account.

### Password

Specify a login password for the user.

### **Confirm Password**

Re-type the login password.

### Administrator

Check this option to give the admin privilege to the user.

### MongoDB User & Role Management

### **User Designer**

### **General Properties**

### **User Name**

Define a name for the user.

### Password

Specify a login password for the user.

### **Confirm Password**

Re-type the login password.

### **Password Digestor**

Indicate whether the server or the client digests the password.

### Mechanisms

Specify the SCRAM mechanisms for creating SCRAM user credentials.

### **Custom Data**

In this tab, you can enter any information associated with this user.

### **Built-in Roles**

In the list, assign this user to be a member of the selected built-in role.

### **User-defined Roles**

In the list, assign this user to be a member of the selected user-defined role.

### **Authentication Restrictions**

To edit specific authentication restrictions that the server enforces on the user, click 😇.

### **Client Source**

Specify a list of IP addresses or CIDR ranges to restrict the client's IP address.

### Server Address

Specify a list of IP addresses or CIDR ranges to which the client can connect.

### **Role Designer**

### **General Properties**

### **Role Name**

Define a name for the role.

### **Built-in Roles**

In the list, assign this role to be a member of the selected built-in role.

### **User-defined Roles**

In the list, assign this role to be a member of the selected user-defined role.

### **Members (Roles)**

In the list, assign the selected role to be a member of this role.

### **Members (Users)**

In the list, assign the selected user to be a member of this role.

### **Authentication Restrictions**

To edit specific authentication restrictions that the server enforces on the role, click 5.

### **Client Source**

Specify a list of IP addresses or CIDR ranges to restrict the client's IP address.

### **Server Address**

Specify a list of IP addresses or CIDR ranges to which the client can connect.

### **Privileges**

To edit specific object privileges for the role, click is to open the window and follow the steps below:

- 1. Expand the node in the tree view until reaching to the target object.
- 2. Check the objects that you want to grant the privileges on.
- 3. In the grid, check the **State** option against the privilege listed in **Privilege** to assign this role to have that privilege. To grant or revoke all privileges, control-click on the grid and select **Grant All** or **Revoke All**.

### **Privilege Manager**

Besides setting privileges in each user, **Privilege Manager** provides another view on privileges in a connection and its database objects.

Note: Available only for MySQL, Oracle, PostgreSQL, SQL Server, MariaDB and MongoDB.

To add privileges, click 🏟 from the user object toolbar and follow the steps below:

- 1. Expand the node in the tree view until reaching to the target object.
- 2. Choose the object and click  $\mathbf{k}_{\mathbf{0}}$  to open the window.
- 3. Check the user on the left pane.
- 4. In the grid, check the relevant options against the privileges listed in **Privilege** to assign the selected user to have that object privilege.

# **Chapter 15 - Other Advanced Tools**

### Server Monitor (Available only in Non-Essentials Edition)

Navicat provides **Server Monitor** to view properties of selected servers. Chosoe **Tools** -> **Server Monitor** and choose the preferred server type from the menu bar.

Note: Available only for MySQL, Oracle, PostgreSQL, SQL Server, MariaDB and MongoDB.

### **Process List**

This tab displays a list of processes from all selected servers. The process list provides the following detailed information. It depends on the database type you are chosen.

- Server name that is given while setting the connection.
- Process ID on the server.
- Serial number of the process.
- Current user who log in to the server.
- Host from which the user is connected.
- Database that the user is currently used.
- Last command that was issued by the user.
- Time, state and info of the process.
- CPU time and state of the process.

If you want to take action on auto-refreshing the process list in assigned seconds, choose **Server Monitor** -> **Set Auto Refresh Time** and enter a refresh time value. To enable or disable the Auto Refresh feature, choose **Server Monitor** -> **Auto Refresh**.

Note: Effect will take once you assign the value.

To set a selected process always show on the top of the grid, control-click and select **Set Always On Top** -> **Always On Top**. To cancel this setting, choose **Cancel** / **Cancel All**.

To stop a selected process, click the <sup>15</sup> button.

### Variables

Note: Available only for MySQL, Oracle, PostgreSQL, MariaDB and MongoDB.

This tab displays a list of all server variables and their values.

You can edit MySQL, MariaDB and Oracle variable values here. Click .... to open an editor for editing.

### **Status**

Note: Available only for MySQL, Oracle, PostgreSQL, MariaDB and MongoDB.

This tab displays a list of all server status and their values.

### Schema Analysis (Available only in Non-Essentials Edition)

Schema Analysis is used for verifying your schemas, visualizing data distributions and identifying data outliers. To start, select a collection or a view in the Objects tab and click *i*, or click *i* in the data viewer.

Note: Available only for MongoDB.

Hint: Schema Analysis Profiles (.nsatmongodb) are stored under the Settings Location.

### Toolbar

| Option / Button | Description  |  |
|-----------------|--|--|
| Y               | Filter the documents for analyzing.                            |  |
| ₽ —<br>₽ —      | Include or exclude fields for analyzing.                       |  |
| Analyze:        | Select the sample documents from the collection for analyzing. |  |
| •               | Start analyzing the sample documents.                          |  |
|                 | Stop analyzing the sample documents.                           |  |

### Results

After the analysis has completed, you will see the schema analysis results. The results visually display information about the type and data distribution of all fields.

If a field has multiple field types, you can click the field type bar on the left, and the chart will show the data distribution chart of that type.

| employees@hr (Mo               | ongoDB) - Sc            |                            |   |

### Virtual Grouping (Available only in Non-Essentials Edition)

**Virtual Group** aims to provide a platform for logical grouping objects by categories, so that all objects are effectively preserved. It can be applied on Connection, Table, Collection, View, Materialized View, Function, Index, Trigger, MapReduce, GridFS, Query, Backup, Automation, Model and Charts.

**Hint:** The vgroup.json file is saved under the default path, e.g. ~/Library/Application Support/PremiumSoft CyberTech/Navicat CC/Navicat Premium/Profiles

If you want to hide the group structure, choose View -> Navigation Pane -> Flatten Connection and choose View -> Flatten Object List.

### Create a new group

- In the main window, control-click on the Navigation pane or the Objects tab and select New Group or Manage Group -> New Group.
- 2. Enter a name for the new group.

### Move an object to a group

- 1. In the main window, control-click an object and select Manage Group -> Add to Group.
- 2. Select an existing group.

### Move an object to the top-level

1. In the main window, control-click an object and select Manage Group -> Exclude From Group.

Hint: You can also use the drag and drop method to move objects.

### **Connection Colorings**

Navicat provides highlighting connections by colors for identifying connections and their database objects. It lets you immediately know which connection you're connected to when you working on database objects. The highlighted color displays in the Navigation pane and the tab of its object window.

To highlight a connection, control-click a connection in the Navigation pane and select Color.

# Find in Database/Schema (Available only in Non-Essentials Edition)

Navicat provides a **Find in Database/Schema** feature offers searching table and view records or object structures within a database and/or schema. To open the Find in Database/Schema window, choose **Tools** -> **Find in Database/Schema** from the menu bar.

- 1. Select a target Connection, Database and/or Schema.
- 2. Enter the search string in **Find**.
- 3. Choose to find Data or Structure in the Look in drop-down menu.
- 4. Choose the Search Mode: Contains, Whole Word, Prefix or Regular Expression.

- 5. Check the **Case Insensitive** box to disable case sensitive search if necessary.
- When finding Structure, you can choose to search different objects: Tables, Collections, Views, Functions, Queries, Indexes, Triggers, Events and/or Materialized Views.
- 7. Click the **Find** button and then double-click an object in the **Find Results** list to view the record or the structure.

### Print Structure (Available only in Non-Essentials Edition)

Navicat allows you to view and print database, schema and table structures, including table names, field names, field types and other field properties. In the main window, control-click a database, a schema or tables and select **Print Database**, **Print Schema** or **Print Tables**.

Note: Available only for MySQL, Oracle, PostgreSQL, SQLite, SQL Server and MariaDB.

### Console

**Console** allows you to use a command-line interface to work with your server. In other words, it provides interactive text-based screen for you to query input and result output from databases. To open the Console window, open a connection and choose **Tools** -> **Console** from the menu bar or press COMMAND-SHIFT-C.

Hint: You are allowed to open multiple console windows which each represents a different connection.

### Oracle

For Oracle servers, you must have **SQL\*Plus** executable for this feature to work. By default, Navicat will look for SQL\*Plus under client folder (e.g. ORACLE\_HOME\bin). However, if Navicat cannot locate SQL\*Plus under the SQL\*Plus Executable Path, you are prompted to locate the executable.

Note: SQL\*Plus does not support Unicode.

### **MongoDB**

For MongoDB servers, you must have **Mongo Shell** executable for this feature to work. If Navicat cannot locate Mongo Shell under the Mongo Shell default path, you are prompted to locate the executable.

### Favorites (Available only in Non-Essentials Edition)

**Favorites** are links to database objects that you visit frequently. By adding a path to your favorites list, you can go to that database objects with a single click, instead of having to navigate the connection, database and/or schema in the Navigation pane.

### Add a link to Favorites

1. Open an object, e.g. table.

- 2. Choose Favorites -> Add to Favorites or press OPTION-SHIFT-#.
- 3. Enter Favorite Name and select Favorite ID.

### Open an object from Favorites

1. Choose Favorites -> favorite\_name or press CONTROL-SHIFT-#.

### **Remove links from Favorites**

- Choose Favorites -> Clear Favorites -> favorite\_name to remove a link.
- Choose Favorites -> Clear Favorites -> Clear All to remove all links from the favorites list.

Note: # represents 1, 2, 3, 4, 5, 6, 7, 8 or 9.

### **Search Filter**

Navicat provides search filters for searching your objects in the Navigation pane, the Objects tab, the Model Designer window and other tree structures.

Simply enter a search string in the **Search** text box directly. If connections have opened in the Navigation pane, the filter will also apply to their database objects.

You can remove the filter by deleting the search string.

# **Chapter 16 - Configurations**

### **Preferences Settings**

Navicat provides several options for customizing its user interface and performance.

To open the Preferences window, choose Navicat XXX -> Preferences from the menu bar.

### General

### **Main Window**

### Show objects under schema in navigation pane

Display database objects using the tree structure in the Navigation pane. To expand a node, simply double-click it.

Hint: Reopen the database/schema to take effect.

### Font

Define the font and its size used by the object list.

### Use default font

Check this option to use the default font settings.

### **Database items**

### Warn if no primary keys found in table

Check this option if you require notification while opening the table with no primary key being set.

### Show function wizard

Display the function wizard (MySQL, Oracle, PostgreSQL, SQL Server or MariaDB) when you create a new function/procedure.

### **Usage Data**

### Share Usage Data

Check this option to let your device sends us information about how you use Navicat to help us improve it. You can view the information being shared by clicking the **Usage Data** button.

### Update

### Automatically check for updates

Check this option to allow Navicat checks for new version automatically at a selected time.

### Include anonymous system profile

Check this option to send us your system information, such as your macOS version to improve our Navicat when Navicat checks for updating.

### Tabs

### **On Startup**

Control what tabs appear when you launch Navicat:

| Option                  | Description  |
|-------------------------|--|
| Open Objects tab only   | Open the Objects tab only, and no other tabs.                                |
| Continue where you left | Open the Objects tab, and reopen the same tabs you were opened when you last |
| off                     | quit Navicat.  |
| Open a specific tab or  | Open the Objects tab, and open the tabs you choose in Set Tabs.              |
| set of tabs             |  |

### **Open Tabs**

### Open new tab in

Set new pop-up windows to open as:

| Option               | Description  |
|----------------------|--|
| Main Window          | Open a new tab in the main window.   |
| Last Tab Window      | Open a new tab in the last opened window.                                    |
| Last Tab Window      | Open a new tab in the last opened window, or a new window if there isn't any |
| (Except Main Window) | opened windows.  |
| New Window           | Open a new window.   |

### Allow opening multiple forms for same object

Check this option to allow opening multiple instances of an object.

### Tab Bar Style

### Always show the tab bar

Always show the tab bar when you open a window.

### Query

### **Code Completion**

### Use code completion (Available only in Non-Essentials Edition)

When you type the . (dot) symbol or a character, the editor will offer you a pop-up list that showing some suggestions for the code completion.

### Auto update code completion info (Available only in Non-Essentials Edition)

With this option is on, Navicat will get the latest database information for code completion from your server automatically when you open the database/schema. Otherwise, you will need to update it manually in the Query window.

See SQL Editor or Script Editor.

### Query

### Ask to save new queries/profiles before closing

With this option is on, Navicat will prompt you to save new queries or profiles every time when you quit the relevant sub-window.

### Autosave modified queries

Save automatically after modifications in Query Editor by defining the interval (e.g. Every 30 seconds).

### Editor

### Disable syntax highlight and code completion if SQL larger than:

The highlighting and code completion features can be limited by setting the maximum file size (e.g. 10) to increase performance.

### Show

### Show line number

Display line numbers at the side of the editor for easily reference.

### Use code folding

Code folding allows codes to collapse as a block and only the first line displayed in the editor.

### Use brace highlighting

Highlight the pair of braces when your cursor moves to either one brace for easily reference.

### Use syntax highlighting

Syntax highlight helps viewing codes clearly. Codes are highlighted in the editor with different colors and fonts according to the categories they belong to.

### **Text Layout**

Tab Width: Spaces

Enter the number of characters that a tab occupies, e.g. 5.

#### Use word wrap

Enable the word wrap mode in the editor.

### **Font and Colors**

### Font

Define the font and its size used by the editor.

#### Use default font

Check this option to use the default font settings.

### **Syntax Colors**

Format your queries in the editor with colored syntax highlighting to improve readability. Set font colors to mark out different text fragments: Common, Keyword, String, Number, Comment and Background. Click on the color boxes and choose your desired color from the Colors dialog window.

### Records

#### **Records**

### Limit records 📖 records per page

Check this option if you want to limit the number of records showed on each page in the grid globally. Otherwise, all records will be displayed in one single page.

Note: To adjust the settings for particular table/collection, see Data Viewer.

### Auto begin transaction

Check this option to start a new transaction automatically when changing records in the table/collection. Otherwise, auto commit is on and you need click the solution in Data Viewer to start a transaction manually.

When starting a transaction in Data Viewer, you can use the so or button to commit or rollback the changes. See Data Viewer.

### Synchronize record after modifying

When updating/inserting a row in the grid (if primary key exists), it will reload this record from the server.

For example: a table with 3 columns - id, name and timestamp. If you update the name column, the timestamp will update immediately in the grid.

### Enable batch update mode

With this option is on, data changes will not be posted to the server when selecting another row, until clicking the sutton.

### Grid

### Font

Define the font and its size used by the grid.

### Use default font

Check this option to use the default font settings.

### Logs

### Log Path

Specify the location for storing the log files.

### Write log for executed queries

Store all SQL statements of all the operations executed over databases and database objects in Navicat.

Hint: Restart Navicat to take effect.

Write log for batch jobs (Available only in Non-Essentials Edition)

Store information for Navicat command line process and all operations while running batch jobs.

### Environment

### **Executables**

SQL\*Plus Executable Path (Available only for Oracle)

Specify the location for SQL\*Plus used in console of Oracle connection. SQL\*Plus is included in Oracle Instant Client.

### SQLite3 Dynamic Library Path

Specify the location for SQLite3 Dynamic Library.

Hint: Restart Navicat to take effect.

Mongo Shell Path (Available only for MongoDB)

Specify the location for Mongo Shell used in the console of MongoDB connections.

### MongoDump Executable Path (Available only for MongoDB)

Specify the location of the mongodump executable that used for MongoDump.

MongoRestore Executable Path (Available only for MongoDB)

Specify the location of the mongorestore executable that used for MongoRestore.

MongoImport Executable Path (Available only for MongoDB)

Specify the location of the mongoimport executable that used for MongoImport.

MongoExport Executable Path (Available only for MongoDB)

Specify the location of the mongoexport executable that used for MongoExport.

### **External Editor**

Choose the file path of an external editor for opening queries.

### **OCI Environment (Available only for Oracle)**

Hint: Restart Navicat to take effect.

### DYLD\_LIBRARY\_PATH

Specify the location which contains Oracle libraries for instant client and SQL\*Plus (e.g. ORACLE\_HOME/lib). Always required.

### Use bundled instant client

**Oracle Instant Client** has already included in Navicat. Check this option to use the bundled one in Navicat, e.g. /Applications/Navicat Premium.app/Contents/OCI.

Oracle Instant Client is the simplest way to deploy a full Oracle Client application built with OCI, OCCI, JDBC-OCI, or ODBC drivers. It provides the necessary Oracle Client libraries in a small set of files. You can also download Oracle Instant Client through -

### **Oracle Instant Client**

Download the appropriate Instant Client packages for your platform and the CPU. All installations REQUIRE the Basic or Basic Lite package. Unzip the packages and set the path points to it.

### ORACLE\_HOME

Specify the location of ORACLE\_HOME for full client only. Instant client should leave it blank.

#### TNS\_ADMIN

Specify the location of the tnsnames.ora file (e.g. ORACLE\_HOME/network/admin). It is optional. Required when using TNS connection.

# Chapter 17 - Hot Keys & Touch Bar

### Hot Keys

### Common

| Keys                                  | Action                      |
|---------------------------------------|-----------------------------|
| COMMAND-R                             | Refresh                     |
| COMMAND-N                             | New Object                  |
| COMMAND-D                             | Design Object               |
| SHIFT-COMMAND-D                       | Duplicate Object            |
| OPTION-SHIFT-# (# represents 1 to 9)  | Add to Favorites            |
| CONTROL-SHIFT-# (# represents 1 to 9) | Open Favorites Link         |
| COMMAND-} or COMMAND-{                | Select Next / PreviousTab   |
| COMMAND-> or COMMAND-<                | Select Next / Previous Page |
| COMMAND-Y                             | New Query                   |
| COMMAND-S                             | Save                        |
| SHIFT-COMMAND-S                       | Save As                     |
| COMMAND-W                             | Close Tab                   |
| SHIFT-COMMAND-W                       | Close Window                |

### **Navicat Main Window**

| Keys              | Action                               |
|-------------------|--------------------------------------|
| COMMAND-1         | Show / Hide Navigation Pane          |
| COMMAND-2         | Show / Hide Information Pane         |
| OPTION-COMMAND-T  | Show / Hide Toolbar                  |
| CONTROL-COMMAND-F | Full Screen                          |
| SHIFT-COMMAND-C   | Console                              |
| SHIFT-COMMAND-H   | History Log                          |
| SHIFT-COMMAND     | Close Connection / Database / Schema |
| SHIFT-COMMAND-T   | Data Transfer                        |
| SHIFT-COMMAND-F   | Find in Database/Schema              |

### **ER Diagram View**

| Keys                    | Action                      |
|-------------------------|-----------------------------|
| ESC                     | Select                      |
| н                       | Move Diagram                |
| R                       | New Foreign Key             |
| DELETE                  | Delete Selected Foreign Key |
| COMMAND-Mousewheel Up   | Zoom In                     |
| COMMAND-Mousewheel Down | Zoom Out                    |

### Table / Collection Designer

| Keys               | Action                   |
|--------------------|--------------------------|
| COMMAND-0          | Open Table / Collection  |
| COMMAND-+          | Add Field                |
| COMMAND-D          | Duplicate Field          |
| COMMAND            | Delete Field             |
| SHIFT-COMMAND-K    | Set Field as Primary Key |
| COMMAND-UP ARROW   | Move Up                  |
| COMMAND-DOWN ARROW | Move Down                |
| COMMAND-F          | Find Field               |
| COMMAND-G          | Find Next Field          |
| SHIFT-COMMAND-G    | Find Previous Field      |

### **Data Viewer**

| Keys                     | Action                                  |
|--------------------------|---|
| COMMAND-D                | Design Object (Table, Collection, View, |
|                          | Materialized View)                      |
| SHIFT-COMMAND-Y          | Query Object (Table, Collection)        |
| COMMAND-F                | Find Text                               |
| COMMAND-G                | Find Next Text                          |
| SHIFT-COMMAND-G          | Find Previous Text                      |
| OPTION-COMMAND-F         | Find and Replace                        |
| COMMAND-UP ARROW         | Sort Ascending                          |
| COMMAND-DOWN ARROW       | Sort Descending                         |
| CONTROL-OPTION-COMMAND-F | Filter Wizard                           |
| COMMAND-+                | Add Record                              |
| COMMAND                  | Delete Records                          |
| COMMAND-RETURN           | Apply Record Changes                    |
| COMMAND-ESC              | Discard Record Changes                  |
| COMMAND                  | Stop Loading Data                       |
| CONTROL-0                | Set to NULL                             |
| CONTROL-SHIFT-B          | Toggle Image Editor                     |
| CONTROL-SHIFT-T          | Toggle Text Editor                      |
| CONTROL-SHIFT-H          | Toggle Hex Editor                       |
| CONTROL-SHIFT-W          | Toggle Web Editor                       |
| SHIFT-COMMAND-V          | Switch View                             |

### View / Materialized View Designer

| Keys | Action |
|------|--------|
|------|--------|

| COMMAND-R | Preview |
|-----------|---------|
| COMMAND   | Stop    |

### **Query Designer**

| Keys            | Action                |
|-----------------|-----------------------|
| COMMAND-R       | Run / Run Selected    |
| SHIFT-COMMAND-R | Run Current Statement |
| COMMAND         | Stop                  |

### **Query Editor**

| Keys                | Action                              |
|---------------------|-------------------------------------|
| COMMAND-F           | Find Text                           |
| COMMAND-G           | Find Next Text                      |
| SHIFT-COMMAND-G     | Find Previous Text                  |
| OPTION-COMMAND-F    | Find and Replace                    |
| COMMAND-UP ARROW    | Go to the Beginning of Page         |
| COMMAND-DOWN ARROW  | Go to the End of Page               |
| COMMAND-LEFT ARROW  | Go to the Beginning of Current Line |
| COMMAND-RIGHT ARROW | Go to the End of Current Line       |
| COMMAND-]           | Increase Indent                     |
| COMMAND-[           | Decrease Indent                     |
| COMMAND-/           | Toggle Comment                      |
| COMMAND-+           | Zoom In                             |
| COMMAND             | Zoom Out                            |
| COMMAND-0           | Reset Zoom                          |

### Debugger

| Keys        | Action    |
|-------------|-----------|
| F9          | Run       |
| F10         | Step Over |
| F11         | Step In   |
| COMMAND-F11 | Step Out  |

### Model

| Keys            | Action           |
|-----------------|------------------|
| SHIFT-COMMAND-P | Page Setup       |
| COMMAND-P       | Print Diagram    |
| ESC             | Select           |
| Н               | Move Diagram     |
| т               | New Table/Entity |
| V               | New View         |

| R                       | New Foreign Key/Relation                        |
|-------------------------|---|
| L                       | New Layer                                       |
| А                       | New Label                                       |
| Ν                       | New Note  |
| 1                       | New Image                                       |
| COMMAND-B               | Bold Selected Table, Entity, View, Foreign Key, |
|                         | Relation or Shape                               |
| COMMAND-Mousewheel Up   | Zoom In   |
| COMMAND-Mousewheel Down | Zoom Out  |

### **Touch Bar**

Navicat supports Touch Bar on the MacBook Pro. The Touch Bar controls change based on which windows or forms you are focusing on.

### **All Navicat Windows**

New Query: Tap 👼 New Query to open a new query form.

### **Navigation Pane**

**Show only active objects:** Tap 🔤 to show the opened objects only in the Navigation pane.

**Search:** Tap  $\bigcirc$  and enter a search string to filter the connections, databases, objects in the Navigation pane.

### **Object Pane**

Objects tab: Tap Objects to switch to the Objects tab.

Other opened tabs: Tap an opened tab to switch to it.

Data Viewer - Table, Collection, View, Materialized View, Query

Add Record: Tap + to add a new record.

- **Delete Records:** Tap **t** to delete the current record.
- Apply Changes: Tap 💙 to apply the changes.

**Discard Changes:** Tap X to remove all edits made to the current record.

**Previous Page:** Tap + to move to the previous page.

**Next Page:** Tap + to move to the next page.

**Grid View:** Tap III to switch to grid view.

- **Form View:** Tap 🔳 to switch to form view.
- **Tree View:** Tap 📰 to switch to tree view.
- **JSON View:** Tap **(1)** to switch to JSON view.

**Object Designer - View, Function, Materialized View, MapReduce, Query** 

**Run / Execute / Preview:** Tap **b** to run, execute or preview the object.

**Stop:** Tap **I** to stop the execution.

### Debugger

**Run:** Tap **b** to start running code in debug mode.

**Step Over:** Tap **\*** to execute the current line and bypass the function in current line.

**Step In:** Tap <sup>‡</sup> to execute the current line and step into the function.

**Step Out:** Tap <sup>1</sup> to finish executing a function call you have stepped into.

**Step End:** Tap *to jump to the last line of the function.* 

**Stop:** Tap **I** to stop the execution.

### Model - Explorer Pane & Properties Pane

**Diagram:** Tap **b** to switch to the Diagram tab.

- **Model:** Tap **I** to switch to the Model tab.
- **Object:** Tap  $\heartsuit$  to switch to the Object tab.

### **Model - Diagram Canvas**

**Auto Layout:** Tap <sup>BR</sup> to apply Auto Layout to the current diagram.

Zoom In/Out: Adjust the slider to zoom in or zoom out the current diagram.

# Chapter 18 - Trace Logs

### Log Files

Navicat provides number of log files to keep track on the actions have been performed in Navicat and they are located in the default folder, e.g. ~/Library/Application Support/PremiumSoft CyberTech/Navicat CC/Navicat Premium/Logs. You are allowed to change the log files location under Preferences.

| File          | Description   |  |  |
|---------------|---|--|--|
| QueryExec.log | bg       Store the statements or scripts of all operations executed over databases and database objects         in Navicat. To open the QueryExec.log file in History Log Viewer, choose Tools -> History         Log or press SHIFT-COMMAND-H. |  |  |
|               |   |  |  |
|               |   |  |  |
|               | Note: This log will be overwritten while Navicat is being restarted.  |  |  |
| cmdline.log   | Store information for Navicat command line process and all operations while running batch jobs.   |  |  |
| LogImport.txt | Record detailed information on every error (indicating success or failure) that occurred during   |  |  |
|               | the import process.   |  |  |
|               | Note: This log will be overwritten on each import.  |  |  |

### **History Log Viewer**

History Log Viewer shows the statements or scripts that are executed or executing in Navicat. If you just want to display error messages, click 🖾. You can also change the information shown by choosing from the **View** menu -

- Show Date
- Show Time
- Show Server Name
- Show Session ID
- Show Connection Type
- Show Execute Time

Note: When you click II, any actions that you do while history is paused will show after resuming.
